Page 8, paragraph 3.5.1.5.1. Delete and substitute:

"3.5.1.5.1 Assignment of index numbers. - Index numbers shall be assigned to all parts having maintenance or supply significance, except as noted below. Index numbers shall be assigned to the parts listing first and then transposed to the figure, to insure that the index numbers fall in sequence in the breakdown. When the same part appears more than once in an illustration and it is necessary to list it more than once in the breakdown, it shall be assigned a different index number for each listing. To eliminate the necessity of remembering all the index numbers that follow, parts that are added to a listing by change may be assigned suffixed numbers such as 2A, 2B, 2C, etc. This system may also be used in basic manuals (initial issues) and revisions when errors are discovered so late in preparation that renumbering of all following index numbers would delay submittal."

"Make from instructions. - When a part has been source coded MO, MF, MH and MG by the procuring activity, the raw (bulk) stock from which the part is to be made will be listed. This listing will be preceded by the words "MAKE FROM."
