QUALIFIED PRODUCTS LIST

OF

FSC 5962

PRODUCTS QUALIFIED UNDER MILITARY SPECIFICATION

MIL-M-38510

MICROCIRCUIT

GENERAL SPECIFICATION FOR

This list has been prepared for use by or for the Government in the acquisition of products covered by Specification MIL-M-38510. Listing of a product is not intended to and does not connote endorsement of the product by the Department of Defense. This list is subject to change without notice; revision or amendment of this list will be issued as necessary. The listing of a product does not release the supplier from compliance with the specification requirements.

THE ACTIVITY RESPONSIBLE FOR THIS QPL IS THE UNITED STATES AIR FORCE, CODE 17, ROME LABORATORY (RL/ERSS), GRIFFISS AIR FORCE BASE, NEW YORK 13441-5700. The activity designated as agent for all contacts relative to this QPL is the Defense Electronics Supply Center (DESC-EQ), Dayton, OH 45444-5270 (513-296-6355) and information pertaining to qualification of products may be obtained from this Center.

If a manufacturer desires to have test data considered for qualification to a U.S. specification, he must perform all required qualification tests; the product must be produced on a certified line acceptable to DESC for the same technology group; and he must comply with the requirements specified in Appendix D, MIL-M-38510, prior to the start of any testing.

The listing of microcircuits in QPL-38510 applies only to products produced in the plant(s) specified on the QPL. Therefore, only those products that have been manufactured, assembled, and tested within the United States and its territories can be supplied as QPL devices unless otherwise indicated herein for international agreements.

To obtain MIL-M-38510 qualified microcircuits, the procurement document must specify that the microcircuits must be approved for inclusion in QPL-38510 and that the microcircuits shall be marked in accordance with the applicable specifications. Ordering data is contained in paragraph 6.1 of MIL-M-38510.

Products listed in Part II of QPL-38510 are considered qualified products. Therefore, manufacturers listed on QPL-38510 shall "JAN" mark and ship the specified part numbered devices for which they are listed, providing all required groups A, B, C, and D quality conformance inspections are performed as specified in paragraphs 3.4.4. and 4.5 of MIL-M-38510. The groups A, B, C, and D quality conformance inspections must be completed and passed for the inspection period before any JAN lots are shipped (paragraph 6.3.1.1 of MIL-M-38510).

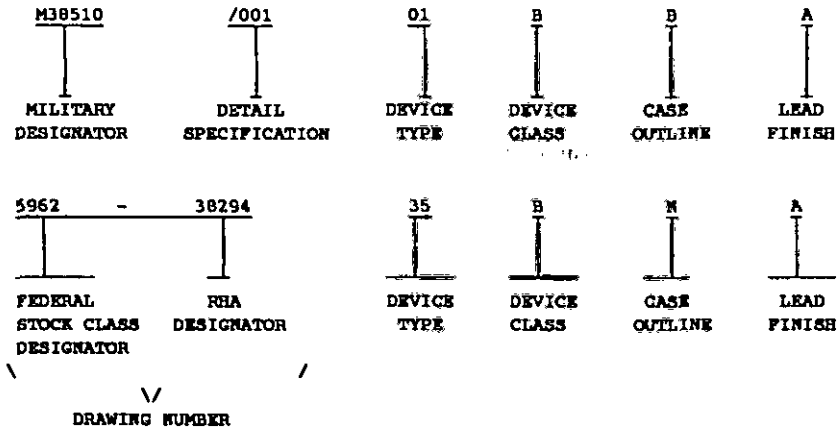

Products listed in part IV of the QPL are considered qualified products. The intent of this listing is to allow continued procurement of Diminishing Jan Sources (DJS) devices to the same part number for logistics support or completion of system production. These devices are not JAN devices; they are not intended for, and should under no circumstances be used for new design. This listing contains all microcircuits which have been subjected to sufficient tests to demonstrate that they meet the electrical test requirements of this document and the applicable military device specification. Quality conformance inspection for shipment shall be *certified according to the Class B requirements* of this document and DJS requirements of Appendix I. Under no circumstances will the JAN certification mark be put on a DJS device. In addition, the country in which assembly is performed must be marked on the device.

For zero source QPL items, it shall be permissible and, in fact, is encouraged for orders to be placed with manufacturers willing to pursue part I qualification during the processing of the order so that the delivered product is part I qualified. The attention of the manufacturers is called to this requirement and manufacturers are urged to arrange to have the products that they propose to offer to the Federal Government tested for qualification in order that they may be eligible to be awarded contracts or orders for the products covered by this specification (paragraph 6.3.1 of MIL-M-38510). For qualification removals, except for quality or reliability problems, a comprehensive explanation on the procedures that must be followed is contained in paragraph 6.3.2 of MIL-M-38510. In addition, devices that have an end-of-life notice issued by the manufacturer are listed in the notes section at the end of the QPL for your information and convenience.

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

The devices are listed in tabular form for each manufacturer. A typical military or Standardized Military Drawing (SMD) part numbers is shown below.

Unless otherwise indicated, each device type for a particular military specification sheet and manufacturer is qualified for all combinations of device class, case outline, and lead material and finish listed herein.

EXAMPLE:

Device type	Device class	Case outline	Lead finish
M38510/002			
01	S	A	B
02	B	B	
05			

Device type	Device class	Case outline	Lead finish
M38510/002			
01	S	A - - -	A or C
02	B	B - - -	B only
05			

This listing covers the following devices:

M38510/00201BAB	M38510/00202BAB	M38510/00205BAB
M38510/00201BBB	M38510/00202BBB	M38510/00205BBB
M38510/00201SAB	M38510/00202SAB	M38510/00205SAB
M38510/00201SBB	M38510/00202SBB	M38510/00205SBB

This listing covers the following devices:

M38510/00201BAA	M38510/00202BAA	M38510/00205BAA
M38510/00201BAC	M38510/00202BAC	M38510/00205BAC
M38510/00201BBB	M38510/00202BBB	M38510/00205BBB
M38510/00201SAA	M38510/00202SAA	M38510/00205SAA
M38510/00201SAC	M38510/00202SAC	M38510/00205SAC
M38510/00201SBB	M38510/00202SBB	M38510/00205SBB

All columns are read vertically except where two columns are connected by the dashed - - - line. The two columns connected by the dashed - - - line are read horizontally.

The SMD forms a part of a one part-one part number documentation system. Two product assurance classes consisting of military high reliability (class B and S) and choice of case outlines and lead finishes are available and are reflected in the Part Identifying Number (PIN).

Unless otherwise indicated, each device type for a particular SMD and manufacturer is qualified for all combinations of device class, case outline, lead finish herein.

EXAMPLE: 5962-38294

35	S	M	A
36	B	X	C

This listing covers the following devices:

5962-3829435 SMA	5962-3829436 SMA
5962-3829435 SXA	5962-3829436 SXA
5962-3829435 SMC	5962-3829436 SMC
5962-3829435 SXC	5962-3829436 SXC
5962-3829435 BMA	5962-3829436 BMA
5962-3829435 BXA	5962-3829436 BXA
5962-3829435 BMC	5962-3829436 BMC
5962-3829435 BXC	5962-3829436 BXC

NOTES:

1/ Manufacturer has announced an end-of-life notice for this device type. They will accept orders subject to inventory availability.

2/ The device has met one of the voltage level requirements of paragraph 3.4.1.4 of MIL-M-38510 and Method 3015 of MIL-STD-883 and shall have the appropriate part mark. The QPL listing for parts shall indicate one of the following ESDS class designators and, in parentheses, the highest ESD voltage (in KV) sustained by the device. For example, 1(1.5) indicates a Class 1 device with 1500V capability, while 1(0) indicates a device declared as Class 1 without data or a device which has not yet been tested for ESDS. After 30 Sep 89, all device types for use in new system or equipment designs and system or equipment redesigns shall have completed classification testing and be marked in accordance with Test Method 3015 of MIL-STD-883.

ESDS Class Designator	Part Marking	Electrostatic Voltage
1	/\	0 - 1999V
2	/\ /\	2000V - 3999V
3	—	≥ 4000V

3/ This device will be supplied with a "Monolithic Memories, Inc." logo and designated symbol "CECD".

4/ As of 29 Nov 86, bottom brazed flat packages (i.e., F-2 configuration 2; F-4 configuration 2; F-5 configuration 2; F-6 configuration 2; F-9 configuration 2) with "Q" dimension less than .026 inch (0.66 mm) and "spider" packages (i.e., F-1; F-3, F-6 configurations 3 and 4; F-8, F-9 configuration 3) shall be prohibited for new design (see appendix C of MIL-M-38510 and the designated flat package outline configurations).

5/ Manufacturer no longer manufactures C lead finish JAN microcircuits. The C lead finish will remain on QPL-38510 until existing inventory is depleted.

6/ The qualification requirements have been removed from this specification due to an obsolete technology, lack of interest, etc. The devices covered by this specification are inactive for new design, but may be procured to the specification for logistics or replacement purposes. All quality assurance performance and other requirements are specified in the detail specification (see MIL-STD-1562 for guidance or new design).

8/ Total dose radiation testing shall be performed only when specifically required by the purchase order or contract and devices that meet the requirements may be marked as specified. RHA-devices indicated with an M, D, R or H may be supplied as a JAN non-rad-hard device and shall be designated with a "/" or "-" (reference MIL-M-38510, paragraph 3.6.2.2).

9/ Zilog has announced last time buys for all JAN products, orders must be placed prior to 30 June 93 with deliveries no later than 31 Dec 93.

14/ This device will be supplied with an "Intersil, Inc." marking until existing inventory is depleted, but date codes later than "8941" will be supplied with the "Harris Semiconductor" marking.

15/ This device will be supplied with an "RCA Corporation" marking until existing inventory is depleted, but date codes later than "8941" will be supplied with the "Harris Semiconductor" marking.

16/ This device will be supplied with an "Intersil, Inc." marking until existing inventory is depleted, but no date codes later than "8941" will be supplied with the "Intersil, Inc." marking.

17/ This device will be supplied with a "Fairchild Semiconductor" marking until existing inventory is depleted, but date codes later than "8939" will be supplied with the "National Semiconductor" marking.

20/ Harris Semiconductor has announced end of life in the flatpac non-rad. hard version only and will accept orders until 1 Jun 93.
