MS 36221 -11	5000	575 to 650	275 to 325

MATERIAL: Exterior cover shall be coated glass cloth. Insulation layer shall be of glass fabric or fiber glass. Heating elements shall be resistance wire or heating tapes containing resistance wire. Inner liner shall be glass cloth.

DESIGN: Heating mantle shall consist of lower and upper halves with interiors of hemispherical shape. Exterior bottom may be recessed to provide a stable base. Circumferential zipper may be provided to hold lower and upper halves together. Upper half shall be provided with an elliptical top opening slit to equator. Closure of side slit of top opening shall be by means of laced or zippered binding. Sizes up to 3000 ml shall be equipped with a thermocouple in lower half. The 5000 ml size may be equipped with a thermocouple in lower half. The glass fabric temperature limit shall be not less than 450°C (842°F).

All electrical components and insulation shall meet the standards of Underwriters Laboratories, Inc., and shall operate on 110 to 120 volts, 60 Hz, AC.

NOTES: Items differing from this Military Standard by minor variations in design are considered standard under this document, provided such variations do not affect performance and are not in conflict with material requirements as specified herein.

APPROVED 22 JUN 1979 REVISED

This standard has been approved by the Department of the and is mandatory for use by that activity. All other military activities are required to employ this standard where suitable.
