MILITARY SPECIFICATION

ENGINES: PREPARATION FOR SHIPMENT AND STORAGE OF

This amendment forms a part of Military Specification MIL-E-10062E, dated 16 August 1982, and is approved for use by all Departments and Agencies of the Department of Defense.

PAGE 6

Paragraph 3.9.1, delete entire paragraph and substitute the following:

"3.9.1 Preservative and drain procedure. This procedure shall not be accomplished until all other engine preservation has been completed, and the engine has been allowed to cool to a cylinder head temperature of maximum 100 degrees Fahrenheit (°F), measured at the spark plug area of all cylinders. Completely drain the coolant that was used to operate the engine during engine preservation, and close the drain cocks. For coolant systems thermostatically controlled, the thermostats shall be removed. Fill the coolant system with compound conforming to grade 5 of MIL-C-16173, and circulate the compound throughout the complete coolant system. This may be accomplished by utilizing a portable pump arrangement or by removal of the belts and rotation of the water pump with an auxiliary motor. Do not operate the engine to accomplish this portion of the engine preservation. On the completion of the circulation of the compound throughout the coolant system, the drain cocks shall be opened, and the coolant system be allowed to drain. The drain cocks shall be left open, and the thermostat reinstalled. A warning tag shall be prepared indicating: COOLANT SYSTEM DRAINED - FLUSH WITH HOT WATER (180°F or above)- CLOSE DRAIN COCKS - FILL SYSTEM TO PROPER OPERATING LEVEL WITH COOLANT PRIOR TO OPERATING THE ENGINE." Tag shall be attached to neck of coolant fill tube."

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.
