MIL-T-83351A(USAF)
AMENDMENT 1
2 FEBRUARY 1987

MILITARY SPECIFICATION

TRUCK, LIFT, AERIAL STORES MHU-124E; 3000 POUND CAPACITY, ELECTRIC MOTOR DRIVEN

This amendment forms a part of Military Specification MIL-T-83351A (USAF), dated 7 June 1973, and is approved for use by the Department of the Air Force and is available for use by all Departments and agencies of the Department of Defense.

PAGE 1

Under STANDARDS Military: Delete "MIL-STD-100 - Engineering Drawing Practices" and "MIL-STD-1273 - Vehicles, Wheeled, Definition of Terms Related to."

PAGE 2

4.6.7.1, Line 5: Delete "MIL-STD-1273" and substitute "the following definition":

Add, " The turning radius is the distance from the turning center to the center of tire contact with the road, of the wheel describing the largest circle, while the vehicle is executing its sharpest practicable turn (usually to the outside front wheel). The turning center is the point about which all parts of a vehicle or combination of vehicles revolve in describing a turn of constant radius and to which all wheel spindles are normally radial. In the case of two-axled tandems in which the axles are constrained to parallelism, the interaxle trunnion or its equivalent is assumed to be radial from this point."
