COMMERCIAL ITEM DESCRIPTION

CLIPS, ELECTRICAL, GENERAL SPECIFICATION FOR

The General Services Administration has authorized the use of this commercial item description (CID) as a replacement for "Clips, Electrical, General Specification for" of W-C-440 for all federal agencies.

1. SCOPE. This commercial item description (CID) covers the general requirements for electrical clips covered by this CID are intended for commercial/industrial applications.

2. CLASSIFICATION/PART OR IDENTIFICATION NUMBER (PIN). This CID uses a classification system which is included in the PIN as shown in the following example (see 7.1).

2.1 Types. Electrical clips shall consist of the following types.

Type PC	-	Power clip
Type PCL	-	Power clip with lug
Type NC	-	Needle clip
Type TCM	-	Test clip, miniature
Type CC	-	Crocodile clip
Type TCI	-	Test clip, insulated
Type TC	-	Test clip
Type TCC	-	Test clip, clamping ears
Type BC	-	Battery clip

Beneficial comments, recommendations, additions, deletions, clarifications, etc., and any data that may improve this document should be sent to: DLA Land and Maritime, Columbus, ATTN: VAT, P.O. Box 3990, Columbus OH 43218-3990, or email relay@dla.mil. Since contact information can change you may want to verify the currency of the address information using the ASSIST Online database at https://assist.daps.dla.mil.

3. SALIENT CHARACTERISTICS.

3.1 Interface and physical dimensions. Electrical clips supplied to this CID shall be as specified herein (see figure 1 through figure 9, inclusive). When a definite material is not specified, material shall be used which will enable the electrical clips to meet the performance requirements of this specification. Acceptance or approval of any constituent material shall not be construed as a guaranty of the acceptance of the finished product.

3.1.1 Rubber. Rubber shall conform to Class III A, grade 50 of A-A-59588 and shall not contain reclaimed rubber.

3.1.2 Polyvinyl chloride. Polyvinyl material shall be opaque nonrigid vinyl chloride-acetate having a durometer hardness not over 60 shore type “A” test and the dielectric strength shall be 250 volts per mil of thickness minimum. After aging in oil for 8 hours at 100°C ±1.1°C (212°F ±2°F), polyvinyl material shall not be tacky nor show signs of decomposition, and when flexed, shall not crack nor split.

3.1.2 Metals.

3.1.2.1 Brass. Brass shall conform to ASTM-B134/B134M.

3.1.2.2 Phosphor bronze. Phosphor bronze shall conform to ASTM-B159/B159M.

3.1.2.3 Copper. Copper material as specified herein shall be commercially pure copper or copper alloyed with 3 percent to 5 percent zinc.

3.1.2.4 Copper-beryllium alloy. Copper-beryllium alloy shall conform to ASTM-A194/A194M, ASTM-B196/B196M, or ASTM-B197/B197M.

3.1.2.5 Steel. Steel shall be of such materials, construction, and quality to ensure the clips meet the performance requirements of this specification. AMS-QQ-W-428 Type I and ASTM-A228/A228M have been enabled electrical clips meet the requirements of this specification.

3.2 Design and construction. Electrical clips shall be of the design, construction, and physical dimensions specified (see 3.7).

3.2.1 Insulator sets. When specified (see 6.1 and table I), clips shall be furnished with an insulator set molded of a polyvinyl or silicone rubber material having dimensions that will provide a suitable fit. When required, insulator sets shall be installed. Unless otherwise specified (see 6.1 and table I), these insulator sets shall be furnished half red and half black for polarity identification purposes.

3.2.2 Threaded parts. All threaded parts shall be in accordance with FED-STD-H28 or equivalent ANSI or ASME requirement.

3.2.2.1 Engagement of threaded parts. Threaded parts shall engage by at least two full threads.

3.2.3 Attaching hardware. Unless otherwise specified, machine screws and rivets shall be fabricated from carbon steel which enable the electrical clips to meet the requirements of this specification except Bessemer compositions (55,000 lb_b/in^2 minimum ultimate strength). Brass screws shall be fabricated in accordance with ASTM-B134/B134M.

3.2.4 Finish. Electrical clips shall be unplated, except that ferrous materials shall be suitably plated to resist corrosion.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T10:15Z
Check the source to verify that this is the current version before use.

3.2.5 Spring. The spring or clip shall be designed so that the spring will not become dislodged when clip is fully compressed.

3.2.6 Minimum metal thickness. Copper parts of electrical clips shall be of minimum thickness as specified in detail requirements for individual clip types.

3.2.7 Jaws. There shall be free jaw openings. In designs where jaws mesh, all teeth shall enter the mating trough. In designs where jaws pass, the front turn-over portions of the jaws shall not cause binding, and the maximum space between the end of the outer jaws turn-over portion and the inner jaw turn-over portion shall not exceed twice the thickness of the metal.

3.2.8 Shunt (where applicable). The shunt shall be placed in such a manner that one coil of the spring shall rest on each end of the shunt so that the shunt will not become dislodged.

3.2.9 Wire crimping ears. The wire crimping ears shall be of sufficient size that they will accommodate a wire capable of carrying the maximum current for which the clip is intended.

3.2.10 Hinge pins. Only solid rivets shall be used for hinge pins.

3.3 Spring pressure. The minimum opening force required shall be as specified on the applicable figure.

3.4 Salt-spray (corrosion). When electrical clips with attaching hardware are subjected to salt spray, there shall be no exposure of the plated base metals or blistering of plated surfaces of the hardware.

3.5 Marking. Electrical clips supplied to this CID shall be marked with the manufacturer's (MFR's) standard commercial PIN, and if space permits, the current rating (amps). (NOTE: The part number marked on the unit pack shall be the CID PIN.)

3.6 Recycled, recovered, or environmentally preferable materials. Recycled, recovered, or environmentally preferable materials should be used to the maximum extent possible provided that the material meets or exceeds the operational and maintenance requirements, and promotes economically advantageous life cycle costs.

3.7 Workmanship. Electrical clips shall be processed in such a manner as to be uniform in quality and shall be free from other defects that will affect life, serviceability, or appearance.

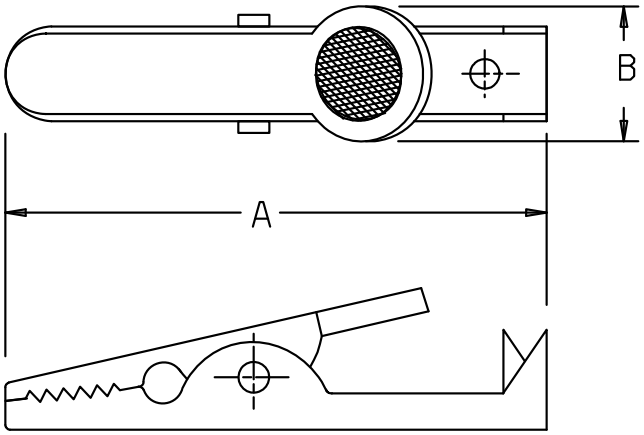

3.7.1 Electrical clips. Electrical clips shall be free from burrs, sharp edges, flaws, fractures, or cracks in the metal. The clips shall be free of grease, oil, metal filings, chips, and other foreign material. They shall be uniform in quality and free from defects that will affect life, serviceability, or appearance.

3.7.2 Insulator sets. The interior shall be free from mold flash congestion. They shall be uniform in quality and free from defects that will affect life, serviceability, or appearance. Insulator sets shall not restrict free jaw opening of the clips.

3.8 Detail requirements for individual clip types. Detail requirements applicable to individual types of electrical clips shall be as specified on the applicable figure. In the event of any conflict between the general requirements of this specification and the detail requirements, the latter shall govern.

3.8.1 Type TCM electrical clip. Type TCM electrical clips shall be of the design, construction, and physical dimensions specified on figure 1 and shall be furnished with a conductor bridge or hole and insulation clamping ears.

3.8.5 Type CC electrical clip. Type CC electrical clips shall be of the design, construction, and physical dimensions specified on figure 5 and shall be furnished with a screw-type wire accommodation and insulation clamping ears.

Item number	A (max)	B (max)	C Attaching hardware	Jaw opening (min)	Spring pressure (lbs-min)	Nominal current rating (amp)	Material	Metal thickness (min)
1	2.19 (55.63)	.38 (9.65)	6-32 UNC or 6-40 UNF-2AX 5/32 LG.	.31 (7.87)	4 1/2	10	Copper	.0260 (.66)

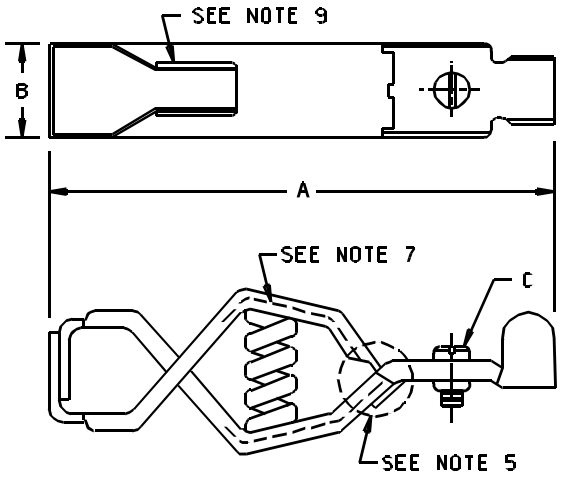

NOTES:
1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. Millimeters are in parentheses.
4. Drawing depicts only general design characteristics and is not intended to limit specific manufacturing processes.
5. Item number 1 shall have a phosphor bronze spring and a brass screw.
6. Interlocking neck construction is required.

5. Design of pivot is optional.
6. Item number 1 shall have a phosphor bronze spring and a brass screw.
7. Item number 4 shall incorporate a solid copper shunt positioned to prevent overheating of the spring.
8. Drawing depicts only general design characteristics and is not intended to limit specific manufacturing processes.
9. Interlocking neck construction is required.
10. Insulator sets (see 3.2.1 and Table I).

3.8.9 Type BC electrical clip. Type BC electrical clips shall be of the design, construction, and physical dimensions specified on figure 9 and shall be furnished with both screw-mounted, solder-type lug and an integral solder bridge conductor accommodation. Insulating clamping ears shall also be provided.

3.8.9.1 Insulated portions. Insulated portions shall be nonrigid polyvinyl-chloride.

3.8.9.2 Hinge pin. The upset end shall be concentric with the rivet diameter and shall have like appearance to the rivet head.

Item number	Jaw opening (min)	A (max)	B (max)	Spring pressure (lbs-min)	Nominal current rating (amp)	Insulator color	Material	Metal thickness (min)

015	BC	2	9
016	TCI	2	3
017	TCC	2	4

1/ If black insulators are required, add BLK to the part number (AA59466-XXXBLK). If red insulators are required, add RED to the part number (AA59466-XXXRED). If no insulators are required the part number is AA59466-XXX.

4. REGULATORY REQUIREMENTS. The offeror/contractor is encouraged to use recovered materials to the maximum extent practicable, in accordance with paragraph 23.403 of the Federal Acquisition Regulation (FAR).

5. PRODUCT CONFORMANCE PROVISIONS.

5.1 Product conformance. The products provided shall meet the salient characteristics of this CID, conform to the producer's own drawings, specifications, standards, and quality assurance practices, and be the same product offered for sale in the commercial market. The Government reserves the right to require proof of such conformance.

5.2 Market acceptance. The following market acceptance criteria are necessary to document the quality of the product to be provided under this CID:

a. The company producing the item must have been producing a product meeting the requirements of this CID for at least 2 years.

b. The company must have sold 200 units meeting this CID in the commercial marketplace over the past 2 years.

6. PACKAGING. .Preservation, packing, and marking shall be as specified in the contract or order.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T10:15Z
Check the source to verify that this is the current version before use.

6.1 Hardware. Unattached hardware, such as insulators, machine screws, and rivets shall be physically protected and enclosed within the unit package.

7. NOTES.

7.1 PIN. The PIN should be used for Government purposes to buy commercial products to this CID. See section 2 for PIN format example.

7.2 Environmentally preferable material. Environmentally preferable materials should be used to the maximum extent possible to meet the requirements of this specification. As of the dating of this document, the U.S. Environmental Protection Agency (EPA) is focusing efforts on reducing 31 priority chemicals. The list of chemicals and additional information is available on their website http://www.epa.gov/osw/hazard/wastemin/priority.htm. Included in the EPA list of 31 priority chemicals are cadmium, lead, and mercury. Use of these materials should be minimized or eliminated unless needed to meet the requirements specified herein (see Section 3).

7.3 Commercial and Government Entity (CAGE) code. For ordering purposes, inventory control, and submission of these electrical clips to DLA Land and Maritime under the Military Parts Control Advisory Group (MPCAG) evaluation program, CAGE code 58536 should be used.

7.4 Source of documents.

(Industry association specifications and standards are generally available for reference from libraries. They are also distributed among technical groups and using Federal agencies.)

7.5 Ordering data. The contract or order should specify the following:

a. CID document number, revision, and CID PIN.

b. Product conformance provisions.

c. Packaging requirements.

d. Whether or not insulator sets are to be furnished with clips (see 3.2.1).

e. When applicable, the proportion of red and black for insulator sets, if other than half and half (see 3.2.1).

7.6 Commercial products. As part of the market analysis and research effort, this CID was coordinated with the following manufacturers of commercial products. At the time of CID preparation and coordination, these manufacturers were known to have commercial products that would meet the requirements of this CID. (NOTE: This information should not be considered as a list of approved manufacturers or be used to restrict procurement to only the manufacturers shown.)
