COMMERICAL ITEM DESCRIPTION
SPECIFICATION SHEET

RESISTOR, VARIABLE, NONWIREWOUND, NONPRECISION, 1 WATT

The General Services Administration has authorized the use of this Commercial Item Description (CID), for all federal agencies.

The complete requirements for procuring a nonwirewound, nonprecision, 1 watt, variable resistor described herein shall consist of this document and the issue in effect of CID A-A-59497.

CLASSIFICATION/PART OR IDENTIFICATION NUMBER (PIN). This CID specification sheet uses a classification system which is included in the PIN as shown in the following example (see NOTES).

CID number	Applicable CID sheet (two digits)	Resistance	Resistance tolerance	Physical parameters	Operating shaft	Electrical rotation and linearity

SALIENT CHARTACTERISTICS

Interface and physical dimensions. Resistors supplied to this CID specification sheet shall be as specified herein (see figure 1).

Resistance. The nominal resistance value expressed in ohms is identified by a three-digit number; the first two digits represent significant figures and the last digit specifies the number of zeros to follow. Resistance values for specific resistors are in accordance with table I.

NOTE: The available resistance values in table I, are based on electrical rotation, see table IV.

TABLE I. Nominal resistance value.

Resistance value designation	Nominal resistance value (Ohms)	Resistance value designation	Nominal resistance value (Ohms)
501	500	103	10,000
102	1,000	203	20,000
202	2,000	503	50,000
502	5,000		

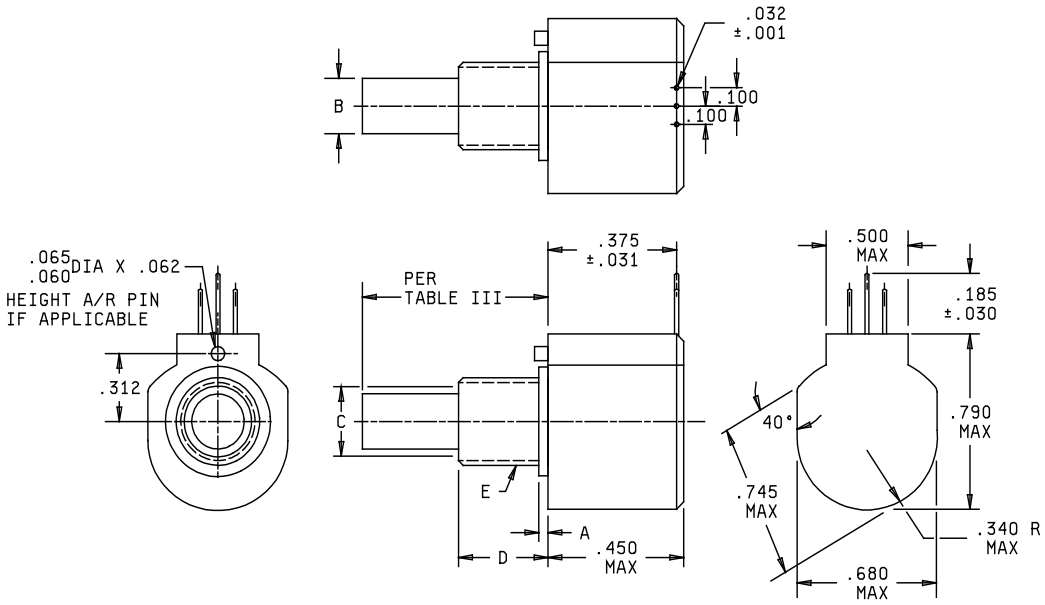

Resistance tolerance. The resistance tolerance available is K (±10 percent).
