MILITARY STANDARD

THICKNESS OF SHEET AND STRIP METALS

This standard has been approved by the Department of Defense and is mandatory on all its activities. Selection for new engineering design applications and repetitive use shall be made from this document.

This standard applies to the nominal thicknesses of uncoated and metal-clad sheet and strip for all metals. "Uncoated" means the absence of coatings produced by plating, spraying, electrical, or any other process applied after the final rolling process of the sheet or strip has been completed. Tolerances for sheet and strip metals are not covered herein. Tolerances should agree with existing Federal and Military standards and otherwise, to applicable industry standards.

Standard nominal thickness in inches

...	.004	.006	.010	.016	.025	.040	.063	.100	.160
...	...	...	...	...	.026	.042	.067	.106	.170
...	...	.007	.011	.018	.028	.045	.071	112	.180
.003	...	...	...	...	.030	.048	.075	.118	.190
...	.005	.008	.012	.020	.032	.050	.080	.125	.200
...	...	...	...	...	.034	.053	.085	.132	.212
...	...	.009	.014	.022	.036	.056	.090	.140	.224
...	...	...	...	.024	.038	.060	.095	.150	.236

The preferred thicknesses are underlined and should be used wherever practicable.

Application — This standard shall be used to guide designers in the selection of thicknesses for sheet and strip metals, to control materials specification requirements, and eventually limit new procurement of sheet and strip metals to those thicknesses specified herein. It is not intended that existing designs and drawings be immediately changed to agree with this standard; however, in the process of revising such designs and drawings, sheet and strip metal nominal thicknesses should be adjusted, where practicable, to conform to this standard.

Preferred thicknesses conform to the 20-series of American Standards Association Standard B32.1. Additional thicknesses have

been selected from the 40-series tables and added thereto to meet the needs of the Department of Defense. The increments between individual numbers in a series are so selected that the ratio between adjacent thicknesses is constant (geometric progression).

Notice. When Government drawings, specifications, or other data are used for any purpose other than in connection with a definitely related Government procurement operation, the United States Government thereby incurs no responsibility nor any obligation whatsoever; and the fact that the Government may have formulated, furnished, or in any way supplied the said drawings, specifications, or other data is not to be regarded by implication or otherwise as in any manner licensing the holder or any other person or corporation, or conveying any rights or permission to manufacture, use, or sell any patented invention that may in any way be related thereto.

(Copies of specifications, standards, drawings, and publications required by contractors in connection with specific procurement functions should be obtained from the procuring activity or as directed by the contracting officer.)

(Copies of this standard for military use may be obtained as indicated in the foreward to the Index of Military Specifications and Standards.)

(Copies of this standard may be obtained for other than official use by individuals, firms and contractors from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C.)
