MIL-E-80130C
AMENDMENT 1
5 February 1987

MILITARY SPECIFICATION

ELECTRO-EROSION MACHINE, METAL
DISINTEGRATING, ELECTRIC ARC,
VIBRATING HEAD, DRILL TYPE

This amendment forms a part of Military Specification MIL-E-80130C dated 11 September 1984, and is approved for use by all Departments and Agencies of the Department of Defense.

PAGE 4

Add the following paragraph: 3.2.1.2 Numerical control system. When specified, a numerical control system shall be provided on the Electro Erosion Machine. The numerical control system shall be of the software programmable minicomputer CNC type, designed to be selectively operated by punched tape, memory or manually by the operator through manual data input. Information stored in memory may be changed by adding, altering or deleting at the discretion of the programmer without alteration or modification to the control. Hard-wired controls are unacceptable. The machine shall be a full 4-axis programmable automatic type control system. The control shall accept program data and translate this data into positioning and feed motion command signals, as well as initiate the programmed auxiliary and fixed cycles. All axis drives shall accept the translated signals and move the machine slides to the programmed position with the control selecting and monitoring the feed rate; axis feed rate and path of axis movements as well as the sequence and timing of all operations. All drives shall provide smooth, accurate and immediate response to control commands. The control shall ensure machine functions occur in the proper order and initiate protective action should a faulty condition occur. The control shall utilize solid state, transistorized or integrated circuitry and modular construction. Plug-in circuit boards shall be coded to facilitate identification and location in the system.
