TIER I ADOPTION NOTICE

AS6009A, Joint Architecture for Unmanned Systems (JAUS) Mobility Service Set, was adopted on 05 Oct 2023 for use by the Department of War (DoW). Proposed changes by DoW activities must be submitted through the SAE International™ Customer Service system by sending an email to customerservice@sae.org detailing your question, the standard number, and the specific section. Technical questions regarding the use of the platform or standards can be submitted StandardsWorks: https://standardsworks.sae.org/help. For urgent technical interpretations, specifically in aerospace, contact the technical staff via the SAE™ main number: 1-724-776-4970. To propose a change to the standard, join the technical committee responsible for that document. Relevant committees can be found at the SAE International™ Standards Development Page: https://www.sae.org/standards/development. Every SAE International™ technical report is reviewed every five years through the committee responsible for that document. AS6009A is managed by the AS-4JAUS Joint Architecture for Unmanned Systems Committee: https://www.sae.org/servlets/works/committeeHome.do?comtID=TEAAS4JAUS.

The SAE International™ is a global professional association and standards organization of over 128,000 engineers and technical experts in the aerospace, automotive, and commercial vehicle industries. SAE International™ manages the AS6009A - JAUS Mobility Service Set, defines a set of standard application layer interfaces called JAUS Mobility Services. JAUS Services provide the means for software entities in an unmanned system or system of unmanned systems to communicate and coordinate their activities. The Mobility Services represent the vehicle platform-independent capabilities commonly found across all domains and types of unmanned systems (referred to as UxVs). At present, over 15 services are defined in this document, many of which were updated in this revision to support Unmanned Underwater Vehicles (UUVs). Each service is described by a JAUS Service Definition (JSD) which specifies the message set and protocol required for compliance. Each JSD is fully compliant with the JAUS Service Interface Definition Language (JSIDL).

AS5669A, AS5710A and AS6009A collectively define the framework to ensure interoperability between unmanned platforms and control stations. Together, they facilitate a modular, service-oriented architecture for the unified command, control, and communication of unmanned systems across the joint force.

Custodians:
Army – AVN
Navy – AS
Air Force – 01

Adopting Activity:
OSD – SE
(Project MOSS-2026-009)

Reviewing Activities:
Army – AV, MI
Navy – CG, CH, EC, MC, NM, SA
Air Force – 10, 11, 19, 20, 27
DLA – GS
