MILITARY SPECIFICATION

TRANSISTOR, NPN, SILICON
TYPES 2N2015, 2N2016

This amendment forms a part of Military Specification MIL-S-19500/248(EL), dated 10 April 1963, and is approved for use by the US Army Electronics Research and Development Command, Department of the Army and is available for use by all Departments and Agencies of the Department of Defense.

PAGE 3

3.5: Delete and substitute:

"3.5 Marking. Except as otherwise specified herein, marking shall be in accordance with Specification MIL-S-19500. If any specification-requirements waiver has been granted, the product-identification marking shall consist of the 'classification' type designation only."

3.5.1: Delete in its entirety.

PAGE 10

Add the following new paragraph:

* "6.4 Mounting insulators. The following statements should be supplied with each device:

a. Ensure insulating tubing is in place on the locator pin.

b. The insulating washer should be appropriately greased on both sides with heat sinking compound before transistor is mounted on heat sink."

PAGE 11

* FIGURE 1, add notes 2 and 3 as follows:

"2. The insulating material covering the locator pin shall have an operational temperature equal to or greater than 135°C.

3. Locator pin insulator and insulating washer (see 6.4)."

1/ For FSC 5961, Army EL is now ER.

The margins of this amendment are marked with an asterisk to indicate where changes (additions, modifications, corrections, deletions) from the previous amendment were made. This was done as a convenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and contractors are cautioned to evaluate the requirements of this document based on the entire content irrespective of the marginal notations and relationship to the last previous amendment.
