*Glass or Stainless Steel.

MATERIAL AND COMPONENTS: Material and components shall be as specified herein. Materials not definitely specified shall be of the quality normally used by the manufacturer in his standard commercial food blenders. Stainless steel shall conform to type 301, 302, or 304 of ASTM A167.

DESIGN: The food blender shall consist of a metal or plastic base which houses the motor and switch and also supports the container. The container shall be easily removable for cleaning and have a plastic or stainless steel cover. The blending assembly shall consist of a minimum of four separate sharpened stainless steel blades, mounted on a drive shaft that has a leakproof seal.

The electric motor shall be the universal type and shall operate on a nominal 120V/60Hz, single phase power source. The motor shall have permanently lubricated bearings. The blender shall be completely wired and equipped with a three conductor cord, 1.83 m (6 ft) minimum length and three prong grounding plug. The electrical wiring shall conform to all the requirements of the Underwriters Laboratory, Code No. UL73.

NOTES:

1. Items differing from this Military Standard by minor variations in design or dimensions are considered standard under this document, provided such variations do not affect performance and are not in conflict with the material requirements specified herein.
2. For design feature purposes, this standard takes precedence over procurement documents referenced herein.
3. Referenced documents shall be of the issue in effect on date of invitations for bid.
