COMMERCIAL ITEM DESCRIPTION

DISPENSER, FREEZE-DRIED COFFEE

The General Services Administration has authorized the use of this commercial item description in preference to Military Specification MIL-D-43807.

Salient characteristics

The freeze-dried coffee dispenser is intended for use in dispensing hot coffee, brewed by mixing freeze-dried coffee and hot water. The freeze-dried coffee dispenser shall be of the following types:

Type I - 100 six ounce cup rate per hour capacity (minimum), 120 volts, 60 Hertz, single phase.

Type II - 100 six ounce cup rate per hour capacity (minimum), 220 volts, 50 Hertz, single phase.

The freeze-dried coffee dispenser shall be designed for countertop or tabletop use and shall be manually activated. The dispenser shall consist essentially of a water storage tank, a container for freeze-dried coffee, two push-type switches, one for coffee and one for hot water, drip-tray with grill, water heater, thermostat, plumbing, base, and the necessary controls and mixing devices to combine and dispense the water and the freeze-dried coffee in the proper proportion for the hot coffee drink. The entire unit shall be inclosed in a corrosion-resistant material cabinet. The base shall be provided with protectors to prevent damage to the surface the dispenser rests upon. The dispenser shall be complete and ready for operation when connected to electrical and water supplies.

The water heater and thermostat shall be capable of sustaining the heated water at 185 $\pm$ 5°F for a 100 six ounce cup rate per hour when using supply water at 60 $\pm$ 5°F at 30 to 120 psig. The freeze-dried coffee throw shall be selected from the adjustable weight range between 1.5 $\pm$ 0.15 and 2.0 $\pm$ 0.02 grams per six ounces of water. The grain size of the freeze-dried coffee shall be such that the percent retained on the following ASTM E11 sieves (U.S. standard sieves) after 5 minutes on a testing sieve shaker (RO-tap or equivalent) shall be as specified in table I.

TABLE I. Sieve requirements

Sieve number	Percent retained
8	None
12	20 max.
40	80 ± 5
pan	15 max.

The type I dispenser shall be designed to operate on a 120 volt, 60 Hertz, single phase electrical source. The type II dispenser shall be designed to operate on a 220 volt, 50 Hertz, single phase electrical source.

The freeze-dried coffee dispenser shall comply with Underwriters Laboratories, Inc. Standard No. 197 and National Sanitation Foundation Standard No. 18.

Identification plate. Each dispenser identification plate shall include the manufacturer's model and serial number, and name, address, trade name or trademark of such known character as to readily identifiable and DLA contract number and national stock number.

Certification. The contractor shall certify that the product offered meets the salient characteristics of this description, and conforms to the producers' own drawings, specifications, standards and quality assurance practices and is the same product sold in the commercial marketplace. The Government reserves the right to require proof of such conformance prior to first delivery and thereafter as may be otherwise provided for under the provisions of the contract.

Packaging.

Commercial packaging. Each dispenser shall be packaged in accordance with commercial practice.

Commercial packing. One dispenser shall be packed in fiberboard containers complying with Uniform Freight Classification or National Motor Freight Classification, as applicable, except metal fasteners shall not be used in the final closure of the boxes. Each box shall be fitted with fiberboard inner packing or other suitable means to afford protection to the dispenser from physical damage while in transit or storage.

Export packaging. Each dispenser shall be packaged in accordance with commercial practice.

Export packing. One dispenser shall be packed in a snug-fitting fiberboard box, constructed and closed in accordance with style RSC, grade V3c, V3s or V4s of PPP-B-636. Each box shall be fitted with weather-resistant grade fiberboard inner packing or other suitable means to afford protection to the dispenser from physical damage while in transit or storage. Alternatively, one commercially packed dispenser shall be overpacked in the heretofore specified box. Each fiberboard box shall be reinforced with non-metallic strapping or pressure-sensitive filament reinforced tape in accordance with the appendix of PPP-B-636.

Marking of shipping containers (commercial and export). Commercial markings for shipping containers are acceptable, provided the following information is included:

National stock number	Date of packaging (month/year)
Item description	Contract number
Quantity, unit of issue	Name, address and zip code of manufacturer
