COMMERCIAL ITEM DESCRIPTION

INSECTICIDE, DIAZINON, EMULSIFIABLE CONCENTRATE

The General Services Administration has authorized the use of this Commercial Item Description in preference to Federal Specification O-I-520.

Intended use

This Commercial Item Description covers a diazinon emulsifiable concentrate which, when diluted with water, is suitable for use in controlling household, ornamental and lawn insect pests and for application in food and non-food areas. It is also used for crack and crevice treatment in food handling establishments. For specific target pests and application sites, refer to the labeling paragraph below.

Salient characteristics

The emulsifiable concentrate shall be composed of stabilized diazinon, an aromatic petroleum solvent, and a nonionic emulsifying agent which shall be completely miscible in the finished formulation, and shall have no adverse effects on the diazinon ingredient and shall enable the formulation, when diluted with water, to meet the emulsion stability stated below. The product shall have not less than 47.5 percent by weight of pure diazinon (O, O-diethyl O-(2-isopropyl-6-methyl-4-pyrimidinyl) phosphorothioate).

Appearance. The product shall be clear, homogeneous, and free from sediment.

Emulsion stability. The emulsion formed upon dilution of the formulation with hard water shall not exceed 1 mL separation per 100 mL of solution when tested as follows:

Place 98 mL of hard water at 80 $\pm$ 5°F (27 $\pm$ 3°C) into a 250 mL beaker and stir mechanically at 1000 RPM using a glass rod stirrer. Add 2 mL of the concentrate from a pipette and continue stirring for 1 minute. Pour the emulsion into a 100 mL glass-stoppered graduated cylinder, and note the time. Examine after 1 hour under strong transmitted light for phase formulation and for sediment. Record by volume.

Flashpoint. The product shall have a minimum flashpoint of 100°F (38°C) when tested in accordance with ASTM Method D-56.

Residual odor. The product shall have a residual odor which will be judged to be mild and inoffensive.

pH. The product shall have a pH of 6.0 to 9.0 when tested in accordance with ASTM Method E-70.

Water content. The product shall have a maximum of 0.1 mL per 100 mL of concentrate when tested in accordance with ASTM Method D-95.

Registered label. Product labeling shall be approved by and registered with the Pesticide Registration Division, Environmental Protection Agency, and shall be in compliance with the requirements of 40 CFR 162 as listed in this description. The product shall contain as a minimum, the following application sites and target pests:

Household insect control. For cockroaches, ants, silverfish, carpet beetles, spiders, scorpions, saw-tooth grain beetles, flour beetles, rice weevils, cigarette beetles, drugstore beetles, Indian meal moths and Brown dog ticks.

Ornamental insect control:

Lawn insect control. For ants, Brown dog ticks, clover mites, crickets, earwigs, fleas, millipedes, sowbugs and springtails.

Food and non-food areas of food handling establishments. For cockroaches, ants, spiders, silverfish and pantry pests.

Certification. The contractor shall certify that the product offered meets the salient characteristics of this description and conforms to the producer's own drawings, specifications, standards and quality assurance practices, and is the same as the product offered for sale in the commercial marketplace. The Government reserves the right to require proof of such conformance prior to first delivery and thereafter as may be otherwise provided for under the provisions of the contract.

Packaging

A. Packaging. The product shall be packaged in accordance with commercial practice.

B. Packing. Packing shall be in accordance with Uniform Freight Classification or National Motor Freight Classification, as applicable.
