MILITARY SPECIFICATION SHEET

ELECTRON TUBE, RADIATION COUNTER
TYPE 8767

This amendment forms a part of Military Specification MIL-E-1/1647A(EC), dated 26 November 1975, and is approved for use by the Naval Electronic Systems Command, Department of the Navy and is available for use by all Departments and Agencies of the Department of Defense.

PAGE 2

Method	Requirement or test	Notes	Conditions	AQL (percent defective)	Inspection level or code	Symbol	Limits Min	Limits Max	Unit
* 1042	Shock, specified pulse	6,9,12	15G, 11 ms duration; half-sine waveform; 3.4 ft/sec velocity	---	---	---	---	---	---

* NOTES: Delete Note 3 and substitute:

"3. The tube shall meet the initial acceptance requirements for background, contamination, photosensitivity and starting voltage and shall not be greater than 10 volts more than the starting voltage at the beginning of the last 60 day period."

PAGE 3

* NOTES: Add new notes 12 and 13:

"12. This is an alternate test to method 1041. Either method 1041 or method 1042 may be used but only one of these tests shall be performed."

"13. Tubes shipped under Government contract must be packaged in hermetically sealed containers to withstand low external pressure which might occur in air shipment."

PAGE 4

* FIGURE 1: Delete "CORROSION RESISTANT STEEL 446" and substitute: "CORROSION RESISTANT STAINLESS STEEL TYPE 430 or 446".

NOTE: The margins of this amendment are marked with an asterisk to indicate where changes from the previous amendment were made. This was done as a convenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and contractors are cautioned to evaluate the requirements of this document based on the entire content irrespective of the marginal notations and relationship to the last previous amendment.
