1/ Displays with luminance contrast ratios of .6 or higher in lighted condition and ±.1or lower in unlighted condition are considered readable under direct sunlight conditions. In addition to luminance contrast, color contrast is an important factor in readability. Colors are listed in order of general preference. Red has the best color contrast; blue and white have the poorest color contrast under sunlight conditions. Blue should be used only when absolutely necessary.

2/ Sunlight performance is diminished 50 percent when two colors per legend area are specified (see figure 4).

Part number: M22885/1-4- (dash number, see table II).

Qualification and periodic inspection: Required as a part of MIL-PRF22885/103 or MIL-S-24317/12 switch assemblies.
