**DATA ITEM DESCRIPTION**
**Title:** Software Metrics Plan

**Number: DI-IPSC-82412**
**AMSC Number: 10405**
**DTIC Applicable: No**
**Preparing Activity: MDA**
**Applicable Forms: None**

**Approval Date: 20230523**
**Limitation: N/A**
**GIDEP Applicable: No**
**Project Number: IPSC-2023-001**

**Use/Relationship**: This Data Item Description shall be used by Department of Defense (DoD) programs in preparing the Software Metrics Plan (SMP) covering the processes for collection and analysis of all software metrics. The SMP provides the acquirer insight regarding the software metrics selected, rationale for choosing the metrics, and the costs for collecting the metrics, along with how the data analysis and trends from each software metric will support the quantitative software engineering management of the effort. The SMP will also include the format for the software metrics report to include: metrics data collected, trends, analysis of metrics data, and opportunities for process improvement.

This Data Item Description (DID) contains the format and content preparation instructions for the data product generated by the specific task requirement included in the contract. It is intended that all requirements contained herein shall apply to all applicable DoD acquisition programs through all program phases.

Requirements:

1. Reference documents. The applicable issue of the documents cited herein, including their approval dates and dates of any applicable amendments, notices, and revision, shall be as specified in the contract.

2. Format. The SMP shall be specified in Section 3 with tailored instructions identified in block 16 of the Contract Data Requirements List (this CDRL) (DD 1423).

3. Content.

    3.1. Identification. This paragraph shall contain a full identification of the system and the software to which this document applies, including, as applicable, identification number(s), title(s), abbreviation(s), version number(s), and release number(s).

    3.2. System overview. This paragraph shall briefly state the purpose of the system and the software to which this document applies. Included shall be the viewpoint architectures that identify the humans, hardware, and software interactions with the system.

    3.3. Overview of required work. Provide a detailed description of the following, in its own subsection:

Check the source to verify that this is the current version before use.

3.3.1 Software Metrics Identification. This paragraph shall summarize the set of software metrics being collected to include rationale for its collection, expected cost of collection, along with the frequency of collection.

3.3.2 Software Metrics Collection Process. This section shall:

3.3.2.1 Identify the software metrics collection process overall, and by software metric, based on maximizing automation while minimizing the costs of collection. This shall include how the software metrics are collected and the specific tools employed during the collection process.

3.3.2.2 Address how the integrity of the software metrics data are maintained to include "chain of custody"

3.3.2.3 Timeliness of delivery of the software metrics data to government stakeholders.

3.3.3 Software Metrics Analysis Process. This section shall:

3.3.3.1 Address software analysis for each software metric and the specific tools employed during the software metrics analysis process

3.3.3.2 Identify the software metrics analysis process overall, and by software metric, based on the approaches and methodologies being employed for analysis of historical software metrics data in order to achieve quantitative management for the software development effort.

3.3.3.3 Include trend analysis and prediction of potential problematic areas (e.g. breakdown in defect containment).

3.3.3.4 Identify potential opportunities for continuous software development process improvement.

3.3.3.5 Timeliness of delivery of the software metrics analysis data to Government stakeholders.

3.3.4 Software Metrics Report Process. This section shall identify the process covering the generation of the software metrics report to include data, analysis, format, presentation, media, delivery frequency along with the tools utilized in automating the process to the maximum extent possible while ensuring timely delivery of the of the software metrics report to government stakeholders.

3.3.5 Appendixes. Appendixes shall be used to provide the following information: Alphabetical listing of acronyms, abbreviations, and associated meanings as used in this document, list of any terms and definitions needed to understand this document, supporting charts, architectures, and classified sections. As applicable, each appendix shall

be referenced in the main body of the document where the data would normally have been provided. Appendixes shall be bound as separate documents for ease in handling. Appendixes shall be lettered alphabetically (A, B, etc.).

END OF DI-IPSC-82412
