DATA ITEM DESCRIPTION
Title: SYSTEM-OF-SYSTEMS HAZARD ANALYSIS (SOSHA)

Number: DI-SESS-82381
AMSC Number: N10311
DTIC Applicable: No
Preparing Activity: AS
Applicable Forms: N/A

Approval Date: 20220331
Limitation: N/A
GIDEP Applicable: No
Project Number: SESS-2022-018

Use/Relationship: The purpose of the SOSHA is to perform and document an analysis of the System-of-Systems (SoS) to identify unique SoS hazards associated with the integration and use of a Sense and Avoid (SAA) system with the Triton Unmanned Aircraft System (UAS). This task will produce special requirements to eliminate or mitigate identified unique SoS hazards which otherwise would not exist, and to ultimately incorporate them into appropriate system documentation.

This Data Item Description (DID) contains the format, content, and intended use information for the data product resulting from the work task described in the contract SOW.

Requirements:

1. Reference documents. MIL-STD-882E Task 209, 11 May 2012.

2. Format. The SOSHA shall be submitted using Microsoft Word (and embedded Microsoft Excel files if logistically beneficial) in the Contractor's format.

3. Content. The Contractor is responsible for conducting an SOSHA on items under their cognizance, including any safety-relevant systems/software the Contractor may have subcontracted.

3.1. Preparation Instructions:

3.1.1 General Instructions:

3.1.1.1. The SOSHA is meant for unclassified data use only. The Contractor shall ensure that only unclassified data is reported in the SOSHA. If classified data needs to be reported, then the Contractor shall contact the Requiring Office for special processing instruction.

3.1.2. Specific Instruction:

3.1.2.1. Task description: As applicable to this phase of the program, the contractor shall perform and document an analysis of the SoS to identify unique SoS hazards and mitigation requirements. The human shall be considered an element of the SoS, receiving both inputs and initiating outputs within the analysis:

Check the source to verify that this is the current version before use.

3.1.2.1.1. The contractor will provide traceability of all identified unique SoS hazards to architecture locations, interfaces, data, and the stakeholder(s) associated with each hazard.

3.1.2.1.2. The contractor will assess the risk of identified unique SoS hazard(s) and recommend mitigation measures to eliminate the hazards or reduce the associated risks when the hazards cannot be eliminated. The hazard severity, hazard frequency of occurrence, and Risk Assessment Codes (RACs) defined in the Triton IFC-4 contract shall be used.

3.1.2.1.3. The contractor will verify and validate the effectiveness of recommended mitigation measures.

3.1.2.1.4. The contractor shall document results of the analysis to include the following:

3.1.2.1.4.1. SoS description: This summary describes the physical and functional characteristics of the SoS. Reference to more detailed individual system descriptions, including specifications and detailed review documentation, shall be supplied when such documentation is available.

3.1.2.1.4.2. Hazard analysis methods and techniques: Provide a description of each method and technique used in conduct of the analysis. Include a description of assumptions made for each analysis and the qualitative or quantitative data used.

3.1.2.1.4.3. Hazard analysis results: Contents and formats may vary according to the individual requirements of the program and methods and techniques used. As applicable, analysis results should be captured in the Hazard Tracking System (HTS).

End of DI-SESS-82381
