**DATA ITEM DESCRIPTION**

**Title:** DESIGN ANALYSIS REPORT

**Number:** DI-SESS-82424
**AMSC Number:** N10442
**DTIC Applicable:** N/A
**Preparing Activity:** AS
**Applicable Forms:** N/A

**Approval Date:** 20231030
**Limitation:** N/A
**GIDEP Applicable:** N/A
**Project Number**: SESS-2023-039

**Use/Relationship:** This report is used to evaluate the design approach and compliance for the configuration item, system, subsystem, and Schedule Replaceable Assemblies and to provide visibility to the government. The data may also be used to formulate additional technical direction to the design activity. This report is normally prepared during the analysis effort for each configuration item or subsystem during system acquisition. It may also be applicable to other developmental efforts

This Data Item Description (DID) contains the format, content, and intended use for the data product resulting from the work task described in the contract Statement of Work/Performance Work Statement.

**Requirements:**

1. Reference documents. None.

2. Format. Contractor Format.

3. Contents**.** The report shall be structured to cover each of the major subsections of the design analysis task separately. The analysis report shall correlate the design requirements with the system requirement and any specified requirement for the subsystem or configuration item. The report shall describe or reference all related data (sketches, preliminary drawings, schematics, functional diagrams) necessary for portrayal of the analysis or to aid in an understanding of the analysis.

3.1. The Design Analysis Report shall be organized into the following sections:

3.1.1. Scope. This section shall be divided into the following sub-sections:

3.1.1.1. Objective of the analysis;

3.1.1.2. Description of the items involved, including adequate drawings, schematics, and embedded digital graphics, to support the analysis;

3.1.1.3. Specification of design constraints and assumptions imposed on the analysis;

Check the source to verify that this is the current version before use.

3.1.1.4. Discussion of the evaluation and analysis procedure, method, or technique used, and its probable accuracy with an estimate of uncertainty, explained by calculations;

3.1.2. 5.. Identification of source material used in the analysis;

3.1.3. Results of the analysis, to include the following:

3.1.3.1. Predicted performance related to requirements;

3.1.3.2. Design impact and any constraints which influence other subsystems or configuration items;

3.1.3.3. Producibility considerations;

3.1.3.4. Problems encountered or revealed, and suggested solutions.

3.1.4. Design Compliance.

3.1.4.1. Document design compliance to technical requirements.

3.1.4.2. Detail compliance to military and industry design specification guidance.

3.1.4.3. Identify where design does not comply with military and industry design specification guidance.

End of DI-SESS-82424
