DATA ITEM DESCRIPTION

Title: CONTRACTOR TEST AND EVALUATION MAINTENANCE DATA

Number: DI-SESS-82441
AMSC Number: N10474
DTIC Applicable: No
Preparing Activity: AS
Applicable Forms: N/A

Approval Date: 20240403
Limitation: N/A
GIDEP Applicable: No
Project Number: SESS-2024-013

Use/Relationship: The Contractor Test and Evaluation Maintenance Data shall document maintenance performed by the prime on the system under test (SUT) during the following periods:

- Contractor Test and Evaluation
- Developmental Test and Evaluation
- Integrated Operational Test and Evaluation

This Data Item Description (DID) contains the format, content, and intended use information for the data deliverable resulting from the work task described in the contract.

The statement of work will identify the specific tests and activities that require maintenance reporting. This information is used to categorize maintenance actions to calculate R&M metrics.

Requirements:

1. Reference Documents. The applicable issue of the documents cited herein, including their approval dates and dates of any applicable amendments, notices, and revisions, shall be as specified in the contract.

2. Format. The Contractor Test and Evaluation Maintenance Data file shall adhere to the following characteristics so that it can be imported into U.S. Government databases:

2.1. Filename – Contractor_Test_and_Evaluation_Maintenance_Data.csv.

2.2. Formatted as a pipe delimited text file.

2.3. Trimmed field values (no spaces at beginning or end of field values).

2.4. Inclusion of every field listed in this DID; if no data is available for field, leave null between pipe separators.

Check the source to verify that this is the current version before use.

3. Content.

3.1. This contractor shall provide data to the government that is extracted from the company's own maintenance system. The files shall include the fields, formats, and any data specifications listed in the table below. Each submission shall be an incremental file that includes data for all records that have been added to or updated in the company's maintenance system since the last file was submitted to the government. The table below specifies required and optional fields and can be further tailored in the statement of work.

Prime_Contractor_Test_and_Evaluation_Maintenance_Data.csv Fields

The following table describes the data elements to be provided. Many of the data elements have a prescribed list of valid codes which are listed in the Appendix E of the Naval Aviation Maintenance Program (NAMP) COMNAVAIRFORINST 4790.2D. These fields are clearly identified in the table.

If related data does not exist, the field shall contain a null value.

Field Name	Data Type	Required/ Optional	Description
reporting_period_begin_date	timestamp	Required	**Reporting Period Begin Date** The date and time of the earliest maintenance records included in the data extract. This shall be the same as the **reporting_period_end_date** of the immediately prior submission.
reporting_period_end_date	timestamp	Required	**Reporting Period End Date** The date and time of the latest maintenance records included in the data extract.
c_cage	string (5 chars)	Required	**Contractor CAGE Code** Five position alphanumeric code that identifies the contractor that is reporting the maintenance.
maf_last_alter_date	timestamp	Required	**MAF Last Altered** The date and time that the maintenance action record was last updated.
action_org	string (3 chars)	Required	**Action Organization** The Action Organization is a 3-character code that identifies the organization that performed the maintenance action. All maintenance performed under this contract shall use a three-digit code specified by the customer to identify the Action Organization.
tec	string (4 chars)	Required	**Type Equipment Code (TEC)** A four-character code that identifies either the SUT or end item on which work is performed.
buno_sn	string (max 100 chars)	Required	**Bureau Number / Serial Number** The DoD's unique serial number assigned to the aircraft or SUT associated with the maintenance action.
ac_des	string (max 255 chars)	Conditionally required	**Aircraft_Designation** If the contractor has assigned its own internal unique identifiers, this field shall contain the prime contractor's unique identifier assigned to the aircraft associated with the maintenance action.
maintenance_id	string (max 255 chars)	Required	**Maintenance ID** Unique number that identifies this maintenance action record from contractor's system.

Field Name	Data Type	Required/ Optional	Description
malfunction	string (3 chars)	Required	**Malfunction (MAL) Code** A three-character alphanumeric malfunction) code that best describes the malfunction that caused the maintenance action. Valid codes and definitions are listed in NAMP Appendix E.
when_discovered	string (1 char)	Required	**When Discovered (WD) Code** One-character alphanumeric code that identifies when the need for maintenance was discovered. Valid codes and definitions are listed in NAMP Appendix E.
received_date	timestamp	Required	**Received Date** The date and time that the maintenance action is opened.
in_work_date	timestamp	Required	**In Work Date** The date and time that the maintenance action is assigned to be worked.
removed_date	timestamp	Conditionally required	**Removed Date** The date and time that the repairable component is removed.
installed_date	timestamp	Conditionally required	**Installed Date** The date and time that a new repairable component is installed.
complete_date	timestamp	Required	**Complete Date** The date and time that the maintenance action is officially marked as complete or, if the maintenance action cannot be completed, the date and time that it is closed. If the maintenance action is still in work, this field shall be null.
action_taken	string (1 char)	Required	**Action Taken Code** A one character code that identifies the type of maintenance action that was performed. Valid codes and definitions are listed in NAMP Appendix E.
transaction_code	string (2 chars)	Required	**Transaction Code** A two-character numeric Transaction Code used to identify the type of data being reported. Valid codes and definitions are listed in NAMP Appendix E.
type_maf	string (2 chars)	Required	**Type MAF** A two-character alpha code that describes the type of discrepancy addressed by the maintenance action. Valid codes and definitions are listed in NAMP Appendix E.
type_maint	string (1 char)	Required	**Type Maintenance** A one-character alpha code that identifies the high level category of maintenance performed. Valid codes and definitions are listed in NAMP Appendix E.

Field Name	Data Type	Required/ Optional	Description
maf_level	string (1 char)	Required	**Maintenance Level** A one-digit numeric code (1 – 3) indicating the level of specialization of the maintenance action: 1. **Organizational level** Basic maintenance, typically conducted on aircraft. 2. **Intermediate level** Specialized maintenance including more thorough and time-consuming diagnostic testing and repair procedures. 3. **Depot level** Highly specialized maintenance, possibly including extensive diagnostic testing.
wuc_uns	string (max 255 chars)	Required	**Assigned Work Unit Code (WUC) / Unified Numbering System (UNS)** A unique code that identifies the system, subsystem, or component on which work is being performed. All repairable items must have a WUC / UNS assigned. For maintenance performed before the development of the WUC / UNS structure, the prime contractor may use a temporary unique internal identifier.
wuc_uns_nomen	string (max 255 chars)	Required	**WUC / UNS Nomenclature** The standardized descriptive name associated with the WUC / UNS or with the prime contractor's temporary unique identifier.
removed_cage	string (5 chars)	Conditionally required	**Removed Part Commercial and Government Entity (CAGE)** The five-position CAGE code assigned to the manufacturer or commercial supplier of the removed item.
removed_pn	string (max 255 char)	Conditionally required	**Removed Part Number** The manufacturer's part number of the removed item.
removed_niin	string (9 char)	Conditionally required	**Removed National Item Identification Number (NIIN)** The nine-character National Item Identification Number for the removed item.
removed_sn	string (max 100 chars)	Conditionally required	**Removed Part Serial Number** The serial number of the removed item.
installed_cage	string (5 chars)	Conditionally required	**Installed Part CAGE** The five-position CAGE code assigned to the manufacturer or commercial supplier of the installed item.
installed_pn	string (max 255 char)	Conditionally required	**Installed Part Number** The manufacturer's part number of the installed item.

Check the source to verify that this is the current version before use.

Field Name	Data Type	Required/ Optional	Description
installed_niin	string (9 char)	Conditionally required	**Installed NIIN** The nine-character NIIN for the installed item.
lot	string (max 50 char)	Conditionally required	**Lot Number** The lot number, if known, for the installed part. Required for cartridges, cartridge actuated devices, and propellant actuated devices.
installed_sn	string (max 100 chars)	Conditionally required	**Installed Part Serial Number** The serial number of the installed item.
position	string (max 255 char)	Conditionally required	**Position** If the **wuc_uns** exists in multiple locations on the platform, this field should identify the position(s) that were replaced or repaired in the maintenance action. If multiple locations were affected, separate the values with comma delimiters. There is not a validation list for this field. The prime contractor may devise its own set of position identification codes; codes should be clear to a user without requiring use of a lookup table.
discrepancy	string (max 1,000 chars)	Required	**Discrepancy** A full description of the problem and related information that could assist in troubleshooting the fault. Example: "Engine oil pressure fluctuating approximately 50 PSI while in afterburner. No problems noted in other operating conditions."
corrective_action	string (max 1,000 chars)	Required	**Corrective Action** A full summary of actions taken to correct the discrepancy. Example: "Found oil pressure sensor not reading on #2 engine during high power ground turn. Replaced oil sensor
elapsed_hrs	decimal (4,1)	Required	**Elapsed Maintenance Time (EMT)** Total clock time involved in performing the maintenance. **Elapsed_hrs** is not affected by the number of people performing the work and excludes cure time, charging time, or leak test unless maintenance personnel are actively monitoring the work. For example, if three people worked together for 2.5 hours to make a repair that included 4 hours of unmonitored cure time, the **elapsed_hrs** would be 2.5 hours.
manhours	decimal (5,1)	Required	**Maintenance Man Hours (MMH)** Total labor hours involved in performing the maintenance. This figure accounts for the total number of people who worked on the maintenance action and the total hours each worked on the repair. In the example above, if three people worked together for 2.5 hours to make a repair that included 4 hours of unmonitored cure time, the total manhours would be 7.5 hours. (3 x 2.5 = 7.5)

Field Name	Data Type	Required/ Optional	Description
consumable_cage	string (max 5 chars)	Conditionally required	**Consumable CAGE** The five-position CAGE code assigned to the manufacturer or commercial supplier of the consumable item that has been determined to be the direct cause of the discrepancy. If no consumable failure directly caused the discrepancy, this field shall be null.
consumable_pn	string (max 255 char)	Conditionally required	**Consumable Part Number** The manufacturer's part number for the consumable item that has been determined to be the direct cause of the discrepancy. If no consumable failure directly caused the discrepancy, this field shall be null.
