REQUIREMENTS:

Dimensions and configuration: See figure 1.

Ⓐ Materials and finishes:

Contact plating: The contact mating area shall be gold per MIL-G-45204, type II, grade C or D, class 2, and nickel plating per QQ-N-290, 30 to 150 microinches. The contact mating area is defined in figure III.

Ⓐ Nonfunctional area: Any portion of the contact other than the contact mating area or termination area can be plated in accordance with paragraph 3.3.3.4.3 section E of MIL-C-55302.

Contact identification: See figure 1.

Body design: The insulator body of each receptacle may be two-piece construction secured by mechanical means.

Contact separation force: Separation force shall be .5 ounce minimum, using the following test pins:

1. Insert and withdraw test pin A (see figure 2).
2. Insert test pin B (see figure 2) fully and withdraw test pin B .071 inch and measure the separation force.

Mating and unmating: The maximum mating force, in pounds, shall not exceed a value equal to 0.25 times the number of contacts, and the withdrawal force, in pounds, shall be a minimum of 0.025 times the number of contacts and shall not exceed the measured insertion force, when the housing is loaded with contacts and mated with connector specified in MIL-C-55302/133.

Contact rating: 3.0 amperes maximum per contact.

Contact resistance: No individual contact pair shall have a resistance exceeding .020 ohm.

Contact retention: 3 pounds minimum per contact.

Dielectric withstanding voltage:

Sea level - 1,000 volts rms, 50 or 60 hertz.

High altitude - 300 volts rms, 50 or 60 hertz.

Ⓐ Oversize pin exclusion - Not applicable.
