MILITARY SPECIFICATION

COMPUTER SET, GUN DIRECTION: 10525735

This amendment forms a part of Military Specification MIL-C-60184(MU), dated 18 March 1965.

Paragraph 3.5.3.1b: Delete and substitute:

"b. The temperature warning indicator lamp shall energize at an ambient temperature greater than 117°F or an internal temperature lower than -18°F."

Paragraph 3.5.3.1c: Delete and substitute:

"c. The computer shall de-energize at an ambient temperature greater than 125°F or an internal temperature lower than -40°F."

Add the following new subparagraph to 3.5.3.1:

"d. The computer may de-energize after sustained operation (sustained operation is defined as, operation of at least 1 hour) at an ambient temperature of +125°F. This is not to be considered a failure. In order to achieve sustained operation after this occurrence the chamber temperature will be reduced, in increments of 2°F, to the point where operation may be sustained, but not less than +121°F."

* Add the following subparagraph to requirement 3.7.1:

"e. The power ready indicator which illuminates when the computer is energized shall blink continuously when the blower cut-off switch is actuated manually. This condition shall also exist when the rear cover is installed as the cover automatically actuates the blower cut-off switch."

Paragraph 4.5.1.8, 1st sentence: Delete "with all covers in place,". 2nd sentence: Delete "of the front cover". 4th sentence: Delete "covers shall be removed".

* Paragraph 4.5.3.1: Add new subparagraph: "(c) Energize computer and observe that when the power ready light comes on it shall not blink. Manually actuate the blower cut-off switch to cause the power ready light to blink continuously."
