DATA ITEM DESCRIPTION
Title: DIMINISHING MANUFACTURING SOURCES AND MATERIAL SHORTAGES (DMSMS) LIFE CYCLE MANAGEMENT DATA

Number: DI-MGMT-82274A
AMSC Number: 10619
DTIC Applicable: No
Preparing Activity: OSD-SO
Applicable Forms: N/A

Approval Date: 20260225
Limitation:
GIDEP Applicable: No
Project Number: MGMT-2026-002

Use/relationship: Data delivered using this Data Item Description (DID) will be used to support DMSMS management activities. Those activities may require collecting Bill of Materials, DMSMS notifications, DMSMS case data, DMSMS health information, DMSMS cost and budgeting information, and DMSMS case mitigation data as a part of the Department of Defense's (DoD) Total System Life Cycle Management responsibilities.

a. The data may be obtained during any life cycle phase.

b. The word "item" is used throughout the document to refer to anything in the system and includes parts, software, materials, chemicals, etc.

c. This DID contains the format, content, and intended use information for the data product resulting from the work task described in the solicitation.

d. This DID should be tailored in the Contract Data Requirements List (CDRL) to include only the required specific data elements from Table 1. Examples of specific uses for the data and the data elements that could be used for each purpose follows:

(1) Proactively monitored parts list data communicates the detailed results of the contractor's risk based analysis of all items to determine those they plan to monitor for obsolescence. (Table 1 data elements 1–6, 8–12, 17–21, 25–32).

(2) Bill of Materials (BOM) data can be used to establish the production status of items used in a system. The BOM will also provide DMSMS managers essential information that enables the identification, forecasting, mitigation, and management of hardware and software obsolescence. The data will be used in DMSMS forecasting tools to enable standard and efficient sharing of information on common items. (Table 1 data elements 1–33).

(3) DMSMS product change and discontinuance notification data can be used to proactively manage DMSMS issues. (Table 1 data elements 1–3, 12, 17–21, and 52–61).

(4) DMSMS case data can be used to obtain DMSMS/Obsolescence active case information for items identified as an obsolescence or DMSMS issue, as well as capturing DMSMS metrics. DMSMS Case Management Data provides essential information that enables

Check the source to verify that this is the current version before use.

the identification, mitigation, and management of hardware and software obsolescence issues. (Table 1 data elements 1–21, and 24–54).

(5) The DMSMS case mitigation, cost, and budgeting data can be used to determine optimal mitigation strategies in the development of DMSMS-related budgets. (Table 1 data elements 1, 2, 10-13, 17, 26-32, and 34-52).

Requirements:

1. Reference Documents. The applicable issue of the documents cited herein, including their approval dates and dates of any applicable amendments, notices, and revisions, shall be as specified in the contract.

2. References

a. Code of Federal Regulations (CFR) 48 CFR 2.101 – Definitions. Available from the Government Publishing Office, https://www.govinfo.gov/app/details/CFR-2016-title48-vol1/CFR-2016-title48-vol1-sec2-101.

b. American Society of Mechanical Engineers (ASME) Y14.44-2008 Reference Designations for Electrical and Electronics Parts and Equipment. Available from http://www.asme.org/.

c. ASME Y14.100-2017 Engineering Drawing Practices. Available from http://www.asme.org/.

3. Format. The DMSMS Life Cycle Management Data shall be provided in tabular format with the Field Names in Table 1 as the column labels. The data shall be provided as an electronically editable, machine-readable, Comma Separated Values (CSV) text file with text fields enclosed in double quotation marks.

4. Content. The data shall contain the information specified by the contract as referenced by the Data Element Numbers in Table 1. The data shall meet the requirements as specified in the Definition, Notes and Instructions, and Data Type columns of Table 1. The indentured path to the system level shall be identified using the item/Next Higher Assembly (NHA) method detailed in Table 1. All fields designated by the contract shall be included. Fields for which data is not available and which are not designated as "Required" in the Notes and Instructions column of Table 1 shall be left blank. The data shall be included to the lowest indenture level (component level) for all items, including subcontractor items, which are not commercial items, as defined in 48 CFR 2.101 – Definitions.

Table 1 Data Elements

Data Element Number	Field Name	Definition	Notes and Instructions	Data Type
1.	OEM Item Number	The item number assigned by the Original Equipment Manufacturer (OEM). This may be the same as the Manufacturer's Item Number (Data Element 19) but more often than not it is different. Sometimes referred to the Configuration Part Number or the Drawing Number.	Required.	Alphanumeric
2.	OEM Name	The full legal name of the entity that is providing the item referenced in Data Element 1 to the government. Sometimes referred to as the Prime Integrator or Prime.	Required.	Alphanumeric
3.	OEM CAGE	Commercial and Government Entity (CAGE) code of the OEM referenced in Data Element 2.	Required.	Alphanumeric (5)
4.	UEI	The Unique Entity Identifier (UEI) of the OEM. The UEI number is a unique nine-digit identifier for businesses, issued by the System for Award Management (SAM). See Entity Registration | SAM.gov for more information.	Required.	Alphanumeric (12)
5.	Revision Designator	The revision number or letter of the item referenced in Data Element 1.	Required if assigned.	Alphanumeric
6.	Software / Firmware Version	The designator assigned to the version of software / firmware used on the item referenced in Data Element 1.	Required for all items containing software or firmware.	Alphanumeric

Check the source to verify that this is the current version before use.

Data Element Number	Field Name	Definition	Notes and Instructions	Data Type
7.	Indenture Level	A number which identifies an item's relative complexity as an assembly or function. This number represents the specific level of the item referenced in Data Element 1 within the system.	Required. Starts with the top level of the system as one and continues in order of indenture yielding a list ordered by indenture level.	Numeric
8.	Reference Designator	A designation used to identify and locate the item referenced in Data Element 1 on the drawing. See ASME Y14.44-2008, section 1.7 for a complete definition.	Required if assigned.	Alphanumeric
9.	Find Number	The reference number assigned to the item referenced in Data Element 1 in lieu of the item's identifying number on the drawing and entered as a cross-reference to the item number of the parts lists where the item name and identification number are given. See ASME Y14.100, appendix D, D-8 for a complete definition.	Required if assigned.	Alphanumeric
10.	NHA Item Number	The OEM Item Number of the parent assembly of the item referenced in Data Element 1. If the referenced item is software or firmware, then the NHA is the item the software is used on.	Required for all items except the top-level assembly.	Alphanumeric
11.	NHA CAGE	CAGE code of the OEM of the NHA referenced in Data Element 10.	Required for all items except the top-level assembly.	Alphanumeric (5)

Check the source to verify that this is the current version before use.

Data Element Number	Field Name	Definition	Notes and Instructions	Data Type
12.	Nomenclature	The name drawing title of the item referenced in Data Element 1. See ASME Y14.100, appendix C, C-4 for further information.	Required for all items.	Alphanumeric
13.	Quantity	The count of the item referenced in Data Element 1 per NHA.	Required for all items.	Numeric
14.	Provisioning Status	The item referenced in Data Element 1 has been provisioned in a Services supply system (Yes or No).	Required for all items. Responses are: Yes if the item has been provisioned or No if it has not been provisioned.	Text (Yes, No)
15.	LRU	The item referenced in Data Element 1 is designated as the lowest replaceable unit (LRU) for the items below it in the indenture.	Required for all items if the system has been provisioned. Responses are: Yes if the item is the LRU and No if not. Note: LRU may have other names. It is the lowest level item that is stocked for organic repair.	Text (Yes, No)
16.	APL, AEL, or RIC	Allowance Parts List (APL), Allowance Equipage Code (AEC), or Repairable Identification Code (RIC) for the item referenced in Data Element 1.	Required if applicable. Applies to Navy parts only.	Alphanumeric
17.	NSN	National Stock Number (NSN) of the item referenced in Data Element 1.	Required if the item has a NSN assigned.	Alphanumeric
18.	COG	The cognizance (COG) Code of the item referenced in Data Element 1. The COG Code is a two-item alphanumeric designator used by the Navy to provide supply management information.	Required if assigned.	Alphanumeric

Data Element Number	Field Name	Definition	Notes and Instructions	Data Type
19.	Manufacturer's Item Number	The item number assigned by the actual manufacturer of the item referenced in Data Element 1. This number will be used to monitor the item for obsolescence issues.	Required. This number may be the same as the item referenced in Data Element 1 if the item is manufactured by the OEM.	Alphanumeric
20.	Manufacturer's Name	The full legal name of the entity that actually manufacturers the item referenced in Data Element 1.	Required.	Alphanumeric
21.	Manufacturer's CAGE	The CAGE code of the entity that actually manufacturers the item referenced in Data Element 1.	Required.	Alphanumeric (5)
22.	Manufacturer's Address	The physical address of the manufacturer of the item referenced in Data Element 1, including country.	Required.	Alphanumeric
23.	Manufacturer's Website URL	The uniform resource locator (URL) of the manufacturer of the item referenced in Data Element 1.	Required if the manufacturer has a website.	Alphanumeric
24.	Alternate OEM Item Number	The OEM item number of the alternate for the item referenced in Data Element 1.	Required if an alternate for the item referenced in Data Element 1 has been identified. Use a comma separated list if more than one alternate has been identified.	Alphanumeric
25.	Monitoring Status	Identifies whether the item referenced in Data Element 1is being proactively monitored for DMSMS issues.	Required for all items. Responses are Proactive or Reactive. Proactive indicates the item is monitored. Reactive indicates that the item is not monitored	Text (Proactive, Reactive)

Check the source to verify that this is the current version before use.

Data Element Number	Field Name	Definition	Notes and Instructions	Data Type
26.	Item Class	Identifies whether the item referenced in Data Element 1 is Commercial Off the Shelf (COTS), a Non-developmental Item (NDI), Military Off the Shelf (MOTS), or Custom Built. See the definitions section of 48 CFR 2.101 for definitions.	Required for all items except materials. Responses are: COTS, NDI, MOTS, Custom.	Text (COTS, NDI, MOTS, Custom.)
27.	Altered Item	Identifies whether the item is an altered item. See ASME Y14.24 Section 8.1.2 for additional information on altered items.	Required for items identified as COTS, NDI, or MOTS in Data Element 25. Responses are: Yes for altered item, No for unaltered item.	Text (Yes, No)
28.	Original Item Number	If the item is an Altered Item as indicated in Data Element 27, enter the orginal item number for the item that was altered.	Required if Data Element 27 is “Yes”	
29.	Original Item Manufacturer’s CAGE	The CAGE code of the entity that actually manufacturers the item referenced in Data Element 28.	Required if Data Element 27 is “Yes”	Alphanumeric (5)
30.	Original Item Manufacturer’s Address	The physical address of the manufacturer of the item referenced in Data Element 29, including country.	Required if Data Element 27 is “Yes”	Alphanumeric
31.	Original Item Manufacturer’s Website	The web address of the manufacturer of the item referenced in Data Element 28.	Required if Data Element 27 is “Yes” and the manufacturer has a website.	Alphanumeric

Check the source to verify that this is the current version before use.

32.	Item Type	A classification of the item. Choose from the following: Software: Software is a sequence of instructions written in a programming language that computers, microprocessors, microcontrollers, or other processing devices can interpret and execute. Types of software include operating systems, applications, drivers, firmware, and utilities. Market categories of software include commercial, Government, open-source, and freeware. Programming languages range from machine code (device language) to 4th and 5th generation languages. Each generation tends to further abstract the language from the device. Electronics: Electronic devices control electrical energy by electrically manipulating the flow of electrons. Electronics encompasses electrical circuits that involve active electrical components such as vacuum tubes, transistors, diodes, integrated circuits, associated passive electrical components, and interconnection technologies. Commonly, electronic devices contain circuitry consisting primarily or exclusively of active semiconductors supplemented with passive elements; such a circuit is described as an electronic circuit. Electrical/electro- mechanical: Electro-	Required. Enter Software, Electronics, Electrical / Electromechanical, Mechanical, Materials. Firmware is not reported here; it is considered as an item of the hardware it is associated with.	Text (Software, Electronics, Electrical / Electromechanical, Mechanical, Materials)

Data Element Number	Field Name	Definition	Notes and Instructions	Data Type
		mechanical devices carry out electrical operations by using moving items. Electro- mechanical devices deal with the generation, distribution, switching, storage, and conversion of electrical energy to and from other energy forms using wires, motors, generators, batteries, switches, relays, transformers, resistors, and other passive components. Mechanical: Mechanical devices are machines or items of machines which are primarily related to or controlled by physical forces. Examples include bearings, machined devices, castings, valves, screws, bolts, panels, etc. Materials: Materials are the substance or substances of which a thing is made or composed. Materials can include raw, refined, or manufactured items that are used in the manufacture of other items. Examples include glues, metal, fabric, minerals, gases, liquids, chemicals, paints, etc.		
33.	Sources	The count of manufacturing sources for the item referenced in Data Element 1.	Required.	Numeric
34.	Annual Demand Rate	The quantity of the item referenced in Data Element 1 expected to be used for production or repair of the end item deliverable(s) per year.	Required. Based on actual data if available. Projected data may be used otherwise.	Numeric

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:01Z
Check the source to verify that this is the current version before use.

Data Element Number	Field Name	Definition	Notes and Instructions	Data Type
35.	MTBF	Mean Time Between Failure (MTBF) of the item referenced in Data Element 1. MTBF refers to the average amount of time that a device or product functions before failing.	Required if known.	Numeric (Hours)
36.	Lead Time	The time between the contractor's order of the item referenced in Data Element 1 from the supplier and the receipt of the order.	Required if known.	Numeric (Months)
37.	Case Number	The DMSMS case number assigned by the contractor for the DMSMS issues related to the item referenced in Data Element 1.	Required if assigned. Note: Cases are a methodology for keeping records on DMSMS issues. If a case number is not assigned, references to this field can be interpreted as references to cases on the item referenced in Data Element 1.	Alphanumeric
38.	Government Case Number	The DMSMS case number for the item referenced in Data Element 1 assigned by the government.	Required if known. Note: See the note for Data Element 37.	Alphanumeric
39.	Case Status	The current status of the case referenced in Data Element 37 using the following terms: Open: The case is in process. Hold: The case is unresolved, but not currently in process. Resolved: A solution for the case has been approved but has not been fully implemented. Closed: The resolution for the case has been fully implemented.	Required. Choose from Open, Hold, Resolved, or Closed	Text (Open, Hold, Resolved, or Closed)

Check the source to verify that this is the current version before use.

Data Element Number	Field Name	Definition	Notes and Instructions	Data Type
40.	Case Status Date	The date the Case Status (Data Element 39) was updated.	Required.	Date (mm/dd/yyyy)
41.	Case Start Date	The date the case was initially opened.	Required.	Date (mm/dd/yyyy)
42.	Case Description	Describe the case referenced in Data Element 37 providing amplifying remarks related to impact, mitigation plans, and/or change in case status.	Required.	Text
43.	Statement of Impact	Describe the DMSMS impact the issue related to the case referenced in Data Element 37 will have on the affected system if the issue is not resolved. DMSMS impact is the inability to produce or sustain the NHA because of a known or Projected DMSMS issue. If no case number was assigned, provide the proposed mitigation strategy for DMSMS issues related to Data Element 1.	Required.	Text
44.	Impact Date	The impact date is the estimated date that the impact described in Data Element 43 will occur.	Required.	Date (mm/dd/yyyy)
45.	Proposed Mitigation	The proposed mitigation strategy to resolve the DMSMS issue related to the case referenced in Data Element 37. Provide alternate mitigation strategies if appropriate. Proposed mitigations shall consider the planned lifecycle of the system and planned upgrades or refreshes. If no case number was assigned, provide the proposed mitigation strategy for DMSMS issues related to Data Element 1.	Required.	Text

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:01Z
Check the source to verify that this is the current version before use.

Data Element Number	Field Name	Definition	Notes and Instructions	Data Type
46.	Proposed Mitigation Schedule	Provide planned or projected start and finish dates for the mitigation described in Data Element 37.	Required.	Date (mm/dd/yyyy)
47.	Proposed Mitigation Cost	Provide the estimated cost of the proposed mitigation described in Data Element 37.	Required.	Numeric (Dollars)
48.	Proposed Mitigation Result	The projected number of years that the system can be sustained based on the mitigation described in Data Element 37.	Required.	Numeric (Years)
49.	Assumptions	The assumptions used in determining the Proposed Mitigation Cost (Data Element 47) and Proposed Mitigation Result (Data Element 48).	Required.	Text
50.	Confidence	The quantitative assessment of the confidence of the Proposed Mitigation Cost (Data Element 47)	Required. Expressed as a percent of confidence with 0% being the least and 100% being the most confident.	Numeric (Percent)
51.	Stock on Hand	The quantity of the item referenced in Data Element 1 held in inventory either by or for the contractor and designated for use on this contract.	Required.	Numeric

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:01Z
Check the source to verify that this is the current version before use.

Data Element Number	Field Name	Definition	Notes and Instructions	Data Type
52.	Status	The current DMSMS status of the item referenced in Data Element 1. Choose from: In production, Discontinued, Researching, or Pending Discontinuance.	Required. Choose from: In production, Discontinued, or Pending Discontinuance. Note: Researching means that discontinuance is suspected and is being investigated. Note: Pending Discontinuance means a Product Discontinuance Notice has been issued by the manufacturer, but the discontinuance date is in the future.	Text (In production, Discontinued, Pending Discontinuance)
53.	EOL	The End of Life (EOL) of the item referenced in Data Element 1. The EOL is the estimated last production date of the referenced item. This date is provided by some commercial sources for electronic items, can be found in some manufacturer's product roadmaps, or may be obtained by direct contact with the manufacturer.	Required. For estimates which, in the opinion of the contractor, are not firm use January as the month and 01 as the day	Date (mm/dd/yyyy)
54.	EOL Type	EOL Type establishes whether the EOL (Data Element 53) originated from the item manufacturer (known), e.g. from a product discontinuance notices, or was based on a prediction.	Choose from: Known or Predicted	Text (Known, Predicted)

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:01Z
Check the source to verify that this is the current version before use.

Data Element Number	Field Name	Definition	Notes and Instructions	Data Type
55.	Date of Notification	Date the Product Discontinuance Notice (PDN) or Product Change Notice (PCN) was issued. If there is no PDN or PCN, use the date the DMSMS issue was discovered by the contractor.	Required if available	Date (mm/dd/yyyy)
56.	Notification Number	The Manufacturer's number for the notification in Data Element 55.	Required if available	Alphanumeric
57.	Notification Description	The description of the notification in Data Element 55 that explains its purpose. For example, discontinued production, planned end of life, product change, transferred to another company, etc.	Required if available	Text
58.	Recommended Replacement Item	The item that the manufacturer recommends as a suitable replacement.	Required if available	Text
59.	Affected System	The System that is affected by the PDN or PCN in Data Element 55.	Required if available. If more than one system is affected, provide a comma separated list of systems.	Text
60.	Last Order Date	The date when the last order for the item referenced in Data Element 1 will be accepted	Required if available	Date (mm/dd/yyyy)
61.	Last Ship Date	The last date the item referenced in Data Element 1 will be shipped.	Required if available	Date (mm/dd/yyyy)

END OF DI-MGMT-82274A
