DATA ITEM DESCRIPTION

Title: DIMINISHING MANUFACTURING SOURCES AND MATERIAL SHORTAGES (DMSMS) METRICS DATA

Number: DI-MGMT-82275A
AMSC Number: 10379
DTIC Applicable: No
Preparing Activity: OSD-SO
Applicable Forms: N/A

Approval Date: 20230321
Limitation:
GIDEP Applicable: No
Project No: MGMT-2023-002

Use/relationship: Data delivered using this Data Item Description (DID) is used to support reporting on DMSMS management activities as a part of the Governments' Total System Life Cycle Management responsibilities. This data is also used to track operations of DoD weapons systems and ensure DoD is achieving operational readiness objectives.

a. The data may be obtained during any program life cycle phase.

b. The word "item" is used throughout the document to refer to anything in the system and includes parts, software, materials, chemicals, etc.

c. This DID contains the format, content, and intended use information for the data deliverable resulting from the work task described in the solicitation.

d. The fields in Table 1 titled Reporting Level and Reporting Category are intended to assist the contracting agency in selecting the correct Data Element Numbers for their needs.

This DID supersedes DI-MGMT-82275

Requirements:

1. Reference Documents. The applicable issue of the documents cited herein, including their approval dates and dates of any applicable amendments, notices, and revisions, shall be as specified in the contract.

2. References:

a. Electronic Code of Federal Regulations (CFR) 48 CFR 2.101 – Definitions. Available from the Government Publishing Office, https://www.govinfo.gov/app/details/CFR-2016-title48-vol1/CFR-2016-title48-vol1-sec2-101

b. SD-22 – Diminishing Manufacturing Sources and Material Shortages (DMSMS) A Guidebook of Best Practices for Implementing a Robust DMSMS Management Program. Available on ASSIST, https://assist.dla.mil/online/start/

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:01Z
Check the source to verify that this is the current version before use.

3. Format. The data shall be provided in tabular format with the Field Names in Table 1 as the column labels and the data in the Data Collected column as the rows. The data shall be provided as an electronically editable, machine-readable, Comma Separated Values (CSV) text file with text fields enclosed in double quotation marks.

4. Content. The DMSMS data for each field shall meet the requirements specified in the Description of Data Collected, and Data Type columns of Table 1. Fields designated by the contract for which data is not available shall be included but left blank. The information shall be included to the lowest indenture level (component level) for all items, including Subcontractor items, which are not commercial items as defined in 48 CFR 2.101 – Definitions.

Table 1 DMSMS Data Elements

Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected	Data Type
1	1	Cost	Original Component Manufacturer (OCM) Item Number	OCM item number	The item number assigned by the original component manufacturer of the item being reported.	Alphanumeric
2	1	Cost	Original Equipment Manufacturer (OEM) Item Number	OEM item number	The item number assigned by the original equipment manufacturer of the parent assembly of the item referenced in data element 1. If the referenced item is software or firmware then the OEM item number refers to the item that the software or firmware is used on.	Alphanumeric
3	1	Cost	OCM Commercial and Government Entity (CAGE) Code	OCM CAGE code	The CAGE Code is a unique identifier assigned to suppliers to various government or defense agencies, to government agencies, and various organizations. CAGE codes provide a standardized method of identifying a given facility at a specific location. The CAGE code of the entity providing the item referenced in data element 1.	Alphanumeric (5)
4	1	Cost	OEM CAGE Code	OEM CAGE code	The CAGE code of the entity providing the item referenced in data element 2.	Alphanumeric (5)
5	1	Cost	Nomenclature	Nomenclature	Name of the item.	Text
6	1	Cost	Type of Resolution Approved	Approved item	The obsolescence issue is resolved by the use of items already approved on the drawing and still in production.	Text (Choose from list under Data Collected)

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:01Z
Check the source to verify that this is the current version before use.

Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected	Data Type
				Life-Of-Need (LON) Buy	A sufficient quantity of the item is purchased to sustain the product until its next update or the discontinuance of the host assembly. The quantity purchased shall consider demands from all users. Because this resolution uses an approved item, no testing or drawing changes are required. The source of supply can be residual stock from the original manufacturer, shelf stock from distributers, sponsor- owned material, etc. Costs for packaging, storage, and transportation shall be considered in the Business Case Analysis (BCA) for selecting resolutions. This is sometimes referred to as a life-of-type buy, bridge buy, or lifetime buy. For software, sufficient licensing and/or support is obtained for the life of need, assuming the life of need is short enough to ensure that the vendor will remain in business.	
				Simple substitute	The item is replaced with an existing item that meets all requirements without modification to either the item or its Next Higher Assembly (NHA) and requires only minimal qualification. Typically, this implies use of a commercial or non-developmental item (NDI) that is a fit/form/function substitute. Associated costs are largely administrative. This is sometimes referred to as an alternate.

Check the source to verify that this is the current version before use.

Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected	Data Type
				Complex substitute	A replacement item that has different specifications but requires no modification of the source product or the NHA is researched and validated. The substitute may be the result of a redefined military requirement.	
				Extension of production or support	The supplier is incentivized to continue providing the obsolete items. This may involve long-term agreements to procure specific quantities of items. One-time costs may be associated with setting up this resolution. Those costs shall be included in any cost and cost avoidance calculations. For software, long-term licensing and/or support agreements are obtained.	
				Repair, Refurbishment, or Reclamation	The obsolescence issue is resolved by doing one of the following: Instituting a repair or refurbishment program for the existing item or assembly, whether through a depot repair, a repair contract with the original manufacturer, or support from a third party. Instituting a reclamation program to reclaim items from marginal, out-of-service, or surplus materiel. Costs for restoring reclaimed materiel because of electrostatic discharge damage, handling damage, and heat damage from unsoldering shall be considered. Obtaining access to the software source code, development tools, and the human resource skills necessary to change it to ensure continued support.

Check the source to verify that this is the current version before use.

Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected	Data Type
				Development of a new source	A new manufacturing or production source for the item is established using technical data without affecting the NHA. If the government has not already obtained access to the technical data, the necessary technical data must be purchased or obtained by the government and provided to the new source. First-article testing is required along with any necessary testing to ensure that the new item functionally meets all requirements when installed in the system.	
				Design refreshment	The original item is replaced with a new item developed using existing technical data and without affecting the NHA. The government already possesses the bulk of the technical data for the unrefreshed item or the data is generally available at no cost or can be purchased. First-article testing is required along with any necessary testing to ensure that the new item functionally meets all requirements when installed in the system. The manufacturing source for the new item may be the original manufacturer or a new source.	
				Redesign of the NHA	The affected item's NHA must be modified. Only the NHA is affected, and the new design will not affect anything at a higher level in the system.	
				Redevelop the item	The original item is replaced with a new item developed without the benefit of existing technical data and without affecting the NHA. The new item may be developed by emulating, reverse engineering, designing a replacement based on the original manufacturing designs and processes, or designing a different item based on the original or new requirements. The manufacturing source for the new item may be the original manufacturer or a new source.

Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected	Data Type
				Redesign complex/system replacement	A major assembly redesign affects assemblies beyond the obsolete item's NHA and may require that higher- level assemblies, software, and interfaces be changed.	
7	1	Cost	Resolution Cost	Cost to develop and implement the resolution	Costs related to engineering and design of the solution, include: Non-Recurring Engineering, Engineering/Engineering Data Revision, Qualification of New Items, Software Development or Modification, Startup Costs, Tooling/Equipment/Software and one-time costs related to the implementation of the solution: Computer Programs/Documentation, Interim Support, Supply/ Provisioning Data, Support/Test Equipment, Technical Manuals, Training/Training Equipment, Installation Costs. The cost of items for LON purchases and of the actual item beyond items used for testing shall not be included. Note: For a multi-phase resolution, capture this information for each phase.	Currency ($)
8	1	Cost	Source of DMSMS Resolution Cost	Actual costs	This item is selected if the development and implementation cost are actual costs.	Text (Choose from list under Data Collected)
				Estimated costs	This item is selected if the development and implementation costs are estimated costs.	
				Costs from DOD cost tables	This item is selected if the development and implementation cost are derived from the DOD average solution cost tables which can be found in SD-22, Table 15.	
9	1	Cost	Redesign Level (Shall only be populated if Design refreshment, Redesign of the NHA, Redevelop the item,	Component	A smaller, self-contained part of a larger entity. Related terms: piece parts, device, commercial item. These are the lowest level items used in assemblies.	Text (Choose from list under Data Collected)

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:01Z
Check the source to verify that this is the current version before use.

Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected	Data Type
			or Redesign complex/system replacement are selected in data element 6.)	Assembly	Assemblies are items built from components. Related terms: card, Shop Replaceable Assembly (SRA), Shop Replaceable Unit (SRU), Line Replaceable Unit (LRU). May be a commercial item.	
				Subsystem	Subsystems are complete functional items built from assemblies and components.	
10	1	Operations Efficiency	Item Class	Commercial item	Commercial items include any item of a type customarily used by the general public, or by nongovernmental entities, for purposes other than governmental purposes that has been sold, leased, or licensed, or offered for sale, lease, or license to the general public. See 48 CFR 2.101 Definitions for the full definition.	Text (Choose from list under Data Collected)
				Non-developmental item (NDI)	NDI include any previously developed item of supply used exclusively for governmental purposes by a Federal agency, a State or local government, or a foreign government with which the United States has a mutual defense cooperation agreement. See 48 CFR 2.101 Definitions for the full definition.	
				Developmental item	A developmental item is any item that is not a commercial item or a NDI.	
11	1	Operations Efficiency	Case Proactivity Indicator	Reactive	Items found to be obsolete after a failed attempt to purchase them or no bid on repair work because of obsolescence.	Text (Choose from list under Data Collected)

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:01Z
Check the source to verify that this is the current version before use.

Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected	Data Type
				Proactive	Items determined to be obsolete prior to an attempt to purchase them. Proactive means the item was found to be obsolete as a result of a discontinuation notice from any source, such as a predictive tool, a vendor survey, research on the item, or an attempt of a life-of-need buy.	
12	1	Operations Efficiency	Reason Issue Was Discovered Reactively (Shall only be populated when the Case Proactivity Indicator, data element 9, for the item is Reactive.)	Not monitored by choice	Items which are not monitored due to choice of the program office.	Text (Choose from list under Data Collected. If the Proactive but other is selected, provide a brief description of the reason in this field.)
				Proactive but vendor survey failed to identify	Items monitored by a vendor survey for obsolescence, which are determined to be obsolete after a failed attempt to purchase them.	
				Proactive but predictive tool failed to identify	Items monitored by a predictive tool for obsolescence, which are determined to be obsolete after a failed attempt to purchase them.	
				Proactive but discontinuation notice not received	Items dependent on a notification from the manufacturer or other source, but which are determined to be obsolete after a failed attempt to purchase them.	
				Proactive but there was a data error	Items proactively monitored, but the monitoring failed because of data errors.	
				Proactive but other (provide details)	All other circumstances where products are monitored.	
13	1	Operations Efficiency	Date Alert Received	Date alert received	The date the DMSMS alert was received.	Date (mm/dd/yyyy)
14	1	Operations Efficiency	Date Case Opened	Date case opened	The date the case was opened to determine resolution.	Date (mm/dd/yyyy)
15	1	Operations Efficiency	Date Resolution Submitted for Approval	Date resolution submitted for approval	The date the resolution for the case was submitted for approval.	Date (mm/dd/yyyy)
16	1	Operations Efficiency	Date Case Resolved	Date case resolved	The date a resolution for the case was approved.	Date (mm/dd/yyyy)

Check the source to verify that this is the current version before use.

Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected	Data Type
17	1	Operations Efficiency	Date Case Closed	Date case closed	Date the resolution was fully implemented. In situations where the implementation requires installation/retrofit over long periods, this can be the date when the development work was complete and the first installation/retrofit was successfully completed.	Date (mm/dd/yyyy)
18	1	Operations Efficiency	Date Implementation Needed	Date implementation needed	The date by which a case must be implemented to prevent an impact on the system.	Date (mm/dd/yyyy)
19	1	Operations Efficiency	Resolution avoided	Approved item LON Buy Simple substitute Complex substitute Extension of production or support Repair, refurbishment, or reclamation Development of a new source Design refreshment Redesign of the NHA Redevelop the item Redesign complex/ system replacement	See data element 6 for definitions. Note: For a proactive resolution, the resolution avoided is the resolution that would have been implemented had the DMSMS issue been opened reactively at the point in the future where there would have been a failed attempt to purchase the item. For a reactive resolution, the resolution avoided is the resolution that could have been implemented had the DMSMS issue been identified and opened proactively at the point in the past where information such as PDN could have been discovered. Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected	Data Type
20	1	Operations Efficiency	Cost of Resolution Avoided	Cost to develop and implement (exclude LON Buy costs)	Costs related to engineering and design of the solution, include: Non-Recurring Engineering, Engineering/Engineering Data Revision, Qualification of New Items, Software Development or Modification, Startup Costs, Tooling/Equipment/Software and one-time costs related to the implementation of the solution: Computer Programs/Documentation, Interim Support, Supply/ Provisioning Data, Support/Test Equipment, Technical Manuals, Training/Training Equipment, Installation Costs. The cost of items for LON purchases and of the actual item beyond testing items shall not be included.	Currency ($)
21	1	Operations Efficiency	Number of Subsystems	Total number of subsystems in the system	Total number of subsystems whether monitored or not. See data element 20 for the definition of subsystems. Note: This field will be the same for all records.	Numeric
22	1	Operations Efficiency	Number of Subsystems Monitored	Total number of subsystems in the system being monitored	Total number of subsystems that are monitored. See data element 20 for the definition of subsystems. Note: This field will be the same for all records.	Numeric
23	1	Operations Efficiency	Number of Components	Total number of components	The total of all components within the system. See data element 20 for the definition of components. Note: This field will be the same for all records.	Numeric

Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected	Data Type
24	1	Operations Efficiency	Number of Components Monitored	Total number of monitored components	The total number of components that are being monitored within the system. See data element 20 for the definition of components. Note: This field will be the same for all records.	Numeric
25	2	Cost	Commodity Type	Software	Software is a sequence of instructions written in a programming language that computers, microprocessors, microcontrollers, or other processing devices can interpret and execute. Types of software include operating systems, applications, drivers, firmware, and utilities. Market categories of software include commercial, Government, open-source, and freeware. Programming languages range from machine code (device language) to 4th and 5th generation languages. Each generation tends to further abstract the language from the device.	Text (Choose from list under Data Collected)
				Electronics	Electronic devices control electrical energy by electrically manipulating the flow of electrons. Electronics encompasses electrical circuits that involve active electrical components such as vacuum tubes, transistors, diodes, integrated circuits, associated passive electrical components, and interconnection technologies. Commonly, electronic devices contain circuitry consisting primarily or exclusively of active semiconductors supplemented with passive elements; such a circuit is described as an electronic circuit.

Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected	Data Type
				Electrical/electro-mechanical	Electro-mechanical devices carry out electrical operations by using moving items. Electro-mechanical devices deal with the generation, distribution, switching, storage, and conversion of electrical energy to and from other energy forms using wires, motors, generators, batteries, switches, relays, transformers, resistors, and other passive components.	
				Mechanical	Mechanical devices are machines or items of machines which are primarily related to or controlled by physical forces. Examples include bearings, machined devices, castings, valves, screws, bolts, panels, etc.	
				Materials	Materials are the substance or substances of which a thing is made or composed. Materials can include raw, refined, or manufactured items that are used in the manufacture of other items. Examples include glues, metal, fabric, minerals, gases, liquids, chemicals, paints, etc.	
26	2	Cost	Operating Environment of the Equipment	Air	Items that are used in or on airborne equipment.	Text (Choose from list under Data Collected)
				Artic	Items that are used in an artic environment.	
				Desert	Items that are used in desert environment.	
				Ground, benign	Items that are used in or on ground equipment in a non-tactical environment.	
				Ground, tactical	Items that are used in or on ground equipment in a tactical environment.	
				Marine	Items that are used in a maritime surface environment: ships, boats, drones, barges, etc.	
				Space	Items that are used outside of the earth's atmosphere.

Check the source to verify that this is the current version before use.

Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected	Data Type
				Undersea	Items that are used in an undersea maritime environment: subs, torpedoes, mines, drones, etc.	
27	2	Cost	Product Acquisition Cost	Cost of items purchased as part of a resolution	The total cost of actual items purchased for a LON buy resolution or for other resolutions where some quantity of the new items was purchased in conjunction with any non-recurring engineering and testing to develop that new item (e.g., the funded resolution may have been reverse engineering but a quantity of the new reversed engineered item was purchased at the same time).	Currency ($)
28	2	Cost	DMSMS Item Type	Component	A component is a smaller, self-contained item of a larger entity. Related terms: piece parts, device, commercial item. These items are the lowest level items used in assemblies.	Text (Choose from list under Data Collected)
				Assembly	Assemblies are items built from components. Related terms: card, SRA, SRU, LRU. May be a commercial item.	
				Subsystem	Subsystems are complete functional items built from assemblies and components.	
29	2	Operations Efficiency	LON Buy Preferred Indicator	Yes	This shall be limited to situations where a LON Buy would have been the best approach but was unavailable. (E.g. We were notified too late, there was no budget, procurement time took too long, etc.)	Text (Choose from list under Data Collected)
				No		
30	2	Operations Efficiency	Monitoring Techniques (Shall only be populated when the Case Proactivity Indicator, data element 9, for the item is Proactive.)	Due to vendor survey	The need for a DMSMS case was established by a monitoring process where the manufacturer of the item is contacted directly to determine the production status of a item.	Text (Choose from list under Data Collected)
				Due to predictive tool	The need for a DMSMS case was established by a monitoring process where the production status of a item is determined by the use of a predictive tool.	

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:01Z
Check the source to verify that this is the current version before use.

Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected	Data Type
				Due to Defense Logistics Agency (DLA) notice	The need for a DMSMS case was established by obtaining a notification from DLA.	
				Due to GIDEP notice	The need for a DMSMS case was established by obtaining a notification from Government-Industry Data Exchange Program.	
				Due to OEM notice	The need for a DMSMS case was established by obtaining a notification from the prime contractor or component manufacturer.	
				Due to prior life-of-need buy inadequate quantity	The need for a DMSMS case was established when the items purchased for a previous LON Buy solution did not last as long as planned.	
31	2	Operations Efficiency	Effect on Production Schedule	Number of months of schedule slip	Months of production delay as a result of the issue that initiated the DMSMS case.	Numeric
32	2	Operations Efficiency	Effect on Logistics Response Time (Shall only be populated when the information is known to the contractor.)	Number of days of extended logistics response time	Days of logistic response time increase as a result of the issue that initiated the DMSMS case.	Numeric
33	2	Operations Efficiency	Effect on Mission Capable Rate (Shall only be populated when the information is known to the contractor.)	Percentage change in mission capable rate	Percentage of mission capable rate decrease as a result of the issue that initiated the DMSMS case.	Numeric (%)
34	2	Operations Efficiency	Consumption Rate (Shall only be populated when the information is known to the contractor.)	Demand per quarter	The expected quarterly demand for the obsolete item based on all systems using the item in question, not just the program office maintaining records.	Numeric
35	2	Operations Efficiency	Stock on hand (Shall only be populated when the information is known to the contractor.)	Stock on hand in the supply system	Estimated stock that would be on-hand in the supply system at the time that the DMSMS issue was reactively identified. Typically this is the reorder level including all safety stock.	Numeric

Check the source to verify that this is the current version before use.

Data Element Number	Reporting Level	Reporting Category	Name of field	Data Collected	Description of Data Collected		Data Type
36	2	Operations Efficiency	Resolution Avoided Implementation Time	Estimated time to implement the resolution avoided as shown in data element 19	Days required to implement the resolution avoided (either a proactive one or a reactive one), i.e., the total time required to close a DMSMS case. Most DMSMS management teams consider a DMSMS case closed when all activities are complete, including changes to drawings and technical manuals. When a resolution will take a long time to complete, for instance, when it is being back fitted by attrition, the DMSMS case can be considered closed when the initial installations are complete and planning for future installations are in place. This data element should be determined on the basis of engineering judgement. In the absence of other data, the following may be used		Numeric
					Approved Part	179	
					LON Buy	187	
					Simple Substitute	136	
					Complex Substitute	225	
					Extension of Production or Support	440	
					Repair, Refurbishment, or Reclamation	265	
					Development of a New Source	190	
					Design Refreshment	190	
					Redesign of the NHA	301	
					Redevelop the Item	190	
					Redesign Complex/System Replacement	644
