MIL-S-44283(GL)
21 September 1987

MILITARY SPECIFICATION

SOUP, INSTANT, REDUCED SODIUM, CHICKEN NOODLE

This specification is approved for use by the Natick Research and Development Center, Department of the Army and is available for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This document covers instant, reduced sodium, chicken noodle sou for use by the Department of Defense as a component of the ration, cold weather

2. APPLICABLE DOCUMENTS

2.1 Government documents.

2.1.1 Documents. The following documents form a part of this document to the extent specified herein. Unless otherwise specified, the issue of these documents shall be those listed in the issue of the Department of Defense Index of Specifications and Standards (DODISS) and supplement thereto, cited in the solicitation.

SPECIFICATIONS

MILITARY

MIL-P-44276 - Packaging of Ration Cold Weather Components (in pouches).

Beneficial comments (recommendations, additions, deletions) and any pertinen data which may be of use in improving this document should be addressed to: U.S. Army Natick Research, Development, and Engineering Center, Natick, MA 01760-5014 by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

STANDARDS

MILITARY

MIL-STD-105 - Sampling Procedures and Tables for Inspection by Attributes.

(Copies of documents required by contractors in connection with specific acquisition functions should be obtained from the contracting activity or as directed by the contracting activity.)

2.1.2 Other Government documents. The following other Government documents form a part of this document to the extent specified herein. Unless otherwise specified, the issues shall be those in effect on the date of the solicitation.

U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES

Federal Food, Drug, and Cosmetic Act and regulations promulgated thereunder (21 CFR Parts 1-199)

U.S. DEPARTMENT OF AGRICULTURE (USDA)

Poultry Products Inspection Regulations

(Application for copies should be addressed to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.)

ENVIRONMENTAL PROTECTION AGENCY (EPA)

National Primary Drinking Water Regulations

(Application for copies should be addressed to the Office of Drinking Water Environmental Protection Agency, WH550D, 401 M Street, S.W., Washington, DC 20460.)

2.2 Other publications. The following documents form a part of this document to the extent specified herein. Unless otherwise specified, the issues of the documents which are DOD adopted shall be those listed in the issue of the DODISS specified in the solicitation. Unless otherwise specified, the issues of documents not listed in the DODISS shall be the issues of the nongovernment documents which are current on the date of the solicitation.

ASSOCIATION OF OFFICIAL ANALYTICAL CHEMISTS (AOAC)

Official Methods of Analysis of the Association of Official Analytical Chemists

(Application for copies should be addressed to the Association of Official Analytical Chemists, 1111 North 19th Street, Suite 210, Arlington, VA 22209.)

AMERICAN ASSOCIATION OF CEREAL CHEMISTS

Approved Methods of the American Association of Cereal Chemists

(Application for copies should be addressed to the American Association of Cereal Chemists, 3340 Pilot Knob Road, St. Paul, MN 55121.)

AMERICAN DEHYDRATED ONION AND GARLIC ASSOCIATION (ADOGA)

Official Standards and Methods of the American Dehydrated Onion and Garlic Association for Dehydrated Onion and Garlic Products

(Application for copies should be addressed to the American Dehydrated Onion and Garlic Association, 650 California Street, Suite 800, San Francisco, CA 94108.)

NATIONAL ACADEMY OF SCIENCE

Food Chemicals Codex

(Application for copies should be addressed to the National Academy Press, 2101 Constitution Avenue, N.W., Washington, DC 20418.)

(Technical society and technical association documents are generally availabl for reference from libraries. They are also distributed among technical groups and using Federal agencies.)

2.3 Order of precedence. In the event of a conflict between the text of thi document and the references cited herein, the text of this document shall take precedence. Nothing in this document, however, shall supersede applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 First article. When specified, a sample shall be subjected to first article inspection (see 4.4, 6.1, and 6.2).

3.2 Ingredients. All ingredients shall be clean, sound, wholesome, and free from foreign material, evidence of rodent or insect infestation, extraneous material, off-odors, off-flavors, and off-colors.

3.2.1 Egg, noodles, extra fine, instant. The instant extra fine egg noodles shall be produced from extra fine egg noodles that meet the FDA Standard of Identity for Enriched Egg Noodles. The egg noodles shall be initially dried with no checking or cracking and have a moisture of 13.0 ± 1.0 percent. The eg noodles shall be between 0.032 and 0.036 inches thick, 0.040 and 0.044 inches wide, and 0.40 and 0.80 inches long and shall have uniform dimensions. The egg noodles shall be cooked and dehydrated so that the original dimensions are maintained. The instant egg noodles shall not have clumps larger than 0.4

Source: https://assist.dla.mil -- Downloaded: 202640-22T01:11Z
Check the source to verify that this is the currentversion before use.

inches and shall be free flowing. The moisture content shall not be greater than 3.0 percent and the noodles shall contain no wet spots. The instant egg noodles shall rehydrate completely within 2 minutes. Instant egg noodles may b alternatively processed such that ingredient requirements for size, moisture, and rehydration are met (see 6.5).

3.2.2 Chicken, diced, dehydrated. Dehydrated diced chicken shall be produce from all white boneless and skinless chicken meat from broilers or fryers in accordance with USDA Poultry Products Inspection Regulations. The uncooked chicken may be held at a temperature not to exceed 40°F for not longer than 4 days or may be frozen to a temperature not to exceed 0°F and held at 0°F or below for a period not exceeding 30 days. The chicken shall be protected at al times from conditions leading to deterioration or contamination. The chicken shall not be frozen more than two times including freezing for dehydration. Th uncooked chicken shall be mechanically mixed with 1.25 percent salt and mechani cally tightly stuffed into suitable casings. The logged chicken shall be cooke to a minimum internal temperature of 160°F to 170°F within 24 hours after stuffing and immediately chilled to 40°F or below. The chilled cooked chicken logs shall be mechanically diced with dicer settings at approximately 1/4 by 1/ by 1/4 inch within 48 hours of cooking. Chicken dices shall be frozen (0°F within 24 hours) and freeze dehydration initiated within 72 hours of freezing. The chicken dices shall be freeze dehydrated at an absolute pressure not to exceed 1.5 millimeters of mercury and at a product temperature as indicated by suitable instruments, not to exceed 150°F. If the platen temperature is maintained at 155°F or below with radiant heating, the product temperature may be disregarded. Alternate freeze dehydration processes that produce equivalent product may be used. After dehydration is complete, the pressure shall be equalized to atmospheric level with nitrogen. The chicken dices shall be protected from oxygen and moisture by holding under a nitrogen atmosphere with 2.0 percent or less oxygen until completion of packaging. Dehydrated chicken dices shall be held not more than 30 days before use in the final product.

3.2.3 Starch, waxy maize, modified, pre-gelatinized, instant. The starch shall be a pure, off-white, odorless, slightly course, ground powder. It shall be modified, pre-gelatinized, cross-linked, and stabilized. The starch shall have a maximum moisture content of 9.0 percent and a pH of 4.0 to 6.5. The starch shall be resistant to breakdown under high temperature heating conditions, shall have good low temperature stability, and shall not set to a gel. The starch shall be bland and display good clarity and a smooth, short textured heavy body. The starch shall have no objectionable off-notes.

3.2.4 Dextrin. Dextrin shall comply with the Food Chemicals Codex.

3.2.5 Syrup solids, corn, powdered. Powdered corn syrup solids shall be produced from corn syrup having a dextrose equivalent of 42. The corn syrup solids shall be bland in flavor and shall have a moisture content of not more that 5.0 percent, an SO_2 content of not more than 40 ppm, and a pH of 4.7. The

Source: https://assist.dla.mil -- Downloaded: 2026-10-22T01:11Z
Check the source to verify that this is the current version before use.

corn syrup solids shall contain a carbohydrate composition of approximately 2(percent monosaccharides, 14 percent disaccharides, 11 percent trisaccharides a 55 percent tetrasaccharides and higher carbohydrates. Not less than 98 percer of the powdered solids shall pass through a U.S. Standard No. 100 sieve.

3.2.6 Salt. Salt shall be white, refined sodium chloride with or without anti-caking agents, shall be a flour salt granulation, and shall comply with purity standards for sodium chloride of the Food Chemicals Codex.

3.2.7 Shortening, vegetable, powdered. Powdered vegetable shortening shal be spray dried, free flowing, and free of any scorching. The shortening shal be composed of partially hydrogenated vegetable oil, sodium caseinate, corn syrup solids, soy protein isolate, dipotassium phosphate, sodium silico-aluminate, tricalcium phosphate, with or without antioxidant and shall have t following typical analyses (see 6.6):

Total oil	75 ± 2.5%
Protein	5.5 ± 0.5%
Carbohydrate	16.0 ± 1.0%
Moisture	1.5 ± 0.5%
Ash	2.0 ± 1.0%

3.2.8 Vegetable protein, hydrolyzed. Hydrolyzed vegetable protein (HVP) shall be a very light colored and light flavored hydrolyzate of corn protein. In a 3-percent solution, the HVP shall have a clean, slightly salty and delic flavor with no detectable harshness, and no off-flavors. The typical analyse of this HVP shall have the following range of values (see 6.3):

Total solids	Not less than 94.0%
Ash	49.5 ± 2.0%
Organic solids	48.5 ± 2.0%
Total nitrogen	6.05 ± 0.5 %
Protein	31.5 ± 2.0%
pH	4.8 ± 0.2
Chloride, as NaCl	Not more than 50.0%

3.2.9 Fat, chicken, rendered. Rendered chicken fat shall have a clear, yellow color and a characteristic mild chicken-fat odor and flavor. The fat shall contain USDA approved antioxidants. Chicken fat may be either rendere the contractor from chickens or purchased frozen or spray dried. When produ by the contractor, the rendered chicken fat shall be utilized in the soup preparation within 72 hours after rendering and maintained at a temperature 40°F or below (there shall be no evidence of freezing) during this time. Wh frozen rendered chicken fat is used, it shall not be stored for more than 75 days and maintained at a temperature of 0°F prior to formulation. The froze rendered chicken fat shall have a peroxide value not to exceed 6 meq./kg. a fatty acid content not to exceed 0.50 percent (expressed as oleic acid), and moisture content not to exceed 0.25 percent. When spray dried chicken fat i used, it shall be between 68.0 and 72.0 percent fat spray dried on nonfat mi

Source: https://assist.dla.mil -- Downloaded: 202610-22T01:11Z
Check the source to verify that this is the current version before use.

Moisture content shall not be more than 2.0 percent. The spray dried chicken fat shall be not more than 75 days old and may be protected by the types and amounts of antioxidants approved by FSIS, USDA. Spray dried chicken fat shall be free from hard lumps and 100 percent shall pass through No. 12 U.S. Standard Sieve. All types of chicken fat shall be produced in a USDA inspected plant in accordance with USDA regulations (see 6.7).

3.2.10 Monosodium glutamate. Monosodium glutamate shall conform to the Food Chemicals Codex.

3.2.11 Sugar, white, granulated. Sugar shall be white, refined, granulated cane or beet sugar, or a combination thereof. The sugar shall comply with industry bulk fine or ready mix grades.

3.2.12 Onion powder. Onion powder shall be Fancy Grade of the Official Standards and Methods of the American Dehydrated Onion and Garlic Association for Dehydrated Onion and Garlic Products.

3.2.13 Celery seed, ground. Ground celery seed shall be derived from the seed of Apium graveolens L. and shall possess a characteristic celery odor and flavor with a warm, slightly bitter aftertaste. The ground celery seed shall contain not less than 2.0 mL of volatile oil per 100 grams and shall be of such size that not less than 95 percent, be weight, shall pass through a U.S. Standard No. 35 sieve. Soluble celery flavoring at a strength equivalent to that of the ground celery seed may be substituted. When soluble flavoring is used, an appropriate adjustment for the carrier may be required.

3.2.14 Chicken meat flavor, natural and/or artificial. Natural and/or artificial chicken meat flavor shall be equal to Artificial Chicken Flavor NV 6536 manufactured by Jay Flavors, Natural and Artificial Roast Chicken Flavor OS 575035U manufactured by PFW division of Hercules Inc., or Natural Chicken Flavor WONF L 2615 manufactured by Oscar Mayer.

3.2.15 Chicken meat solids, dried. The dried chicken meat solids shall be produced under the inspection of the Food Safety and Inspection Services (FSIS), shall be stored under conditions, such as refrigeration, which minimize degradation, and shall not be more than 6 months old at time of use. The chicken meat solids shall not have more than 3.0 percent moisture. The dried chicken meat solids may be protected by the types and amounts of antioxidants approved by the FSIS, USDA. The product shall have good flavor and odor and shall be reduced to a fine powder such that 100 percent will pass through a U.S. Standard No. 12 sieve (see 6.8).

3.2.16 Parsley, dehydrated, chopped. The dehydrated chopped parsley shall possess a characteristic uniform green color and a good typical aroma free from scorched, musty, or other objectionable odors. The parsley shall contain not more than 1.0 percent, by weight, of defective pieces (such as but not limited to discolored or large unchopped pieces) or 2.0 percent, by weight, of stems longer than 1/4 inch.

Source: https://assist.dla.mil -- Downloaded: 202640-22T01:11Z
Check the source to verify that this is the current version before use.

3.2.17 Silicon dioxide. Silicon dioxide shall comply with the Food Chemical Codex.

3.2.18 Turmeric, ground. Ground turmeric shall be prepared from Curcuma longa L. and shall possess a deep yellow to orange-yellow color with a peppery, aromatic odor. The ground turmeric shall contain not less than 3.5 mL of volatile oil per 100 grams of ground turmeric and shall be of such size that no less than 95 percent shall pass through a U.S. Standard No. 40 sieve.

3.2.19 Garlic powder. Garlic powder shall be Fancy Grade of the Official Standards and Methods of the American Dehydrated Onion and Garlic Association for Dehydrated Onion and Garlic Products.

3.2.20 Pepper, white, ground. Ground white pepper shall be derived from the dried mature berries of Piper nigrum L. from which the outer covering or outer and inner coverings have been removed. The ground pepper have a characteristic penetrating odor, a hot, biting, pungent flavor, and a light color. The ground white pepper shall contain not less than 1.0 mL volatile oil per 100 grams of ground white pepper and be of such size that not less than 95 percent shall pass through a U.S. Standard No. 40 sieve.

3.2.21 Disodium inosinate and disodium guanylate. Disodium inosinate and disodium guanylate shall comply with the Food Chemicals Codex.

3.2.22 Color FD&C, Yellow No. 5. FD and C yellow No. 5 color shall be FDA certified.

3.2.23 Water. Water used for formulation and washing shall conform to the National Primary Drinking Water Regulations.

3.3 Preparation and processing.

3.3.1 Formulation of the instant chicken noodle soup. The soup shall be formulated as follows:

	Percent by weight
Egg noodles, extra fine, instant	62.0
Chicken, diced, dehydrated	5.5
Soup base	32.5

3.3.2 Formulation of soup base. The soup base shall be formulated as follows:

Source: https://assist.dla.mil -- Downloaded: 2026-10-22T01:11Z
Check the source to verify that this is the current version before use.

Ingredient	Percent by weight
Salt	62.0
Starch, instant; dextrin; corn syrup solids or any combination thereof (see 6.4)	19.0
Shortening, vegetable, powdered	14.5
Vegetable protein, hydrolyzed	10.5
Fat, chicken	10.5
Monosodium glutamate	6.2
Sugar	4.8
Onion powder	3.2
Celery seed, ground	3.2
Chicken meat flavor	2.0
Chicken meat solids	2.0
Silicon dioxide	1.5
Parsley, dehydrated, chopped	1.0
Garlic powder	1.0
Turmeric	0.28
Pepper, white	0.2
Disodium inosinate and disodium guanylate	0.1
Color, FD&C Yellow No. 5	0.02

3.3.3 Preparation of soup base. The soup base shall be uniformly blended after first mixing the chicken fat with the silicon dioxide. If spray dried chicken fat is used the silicon dioxide may be reduced and the percent difference added into spray dried chicken fat.

3.3.4 Preparation of instant chicken noodle soup. The instant egg noodle, dehydrated chicken dices, and soup base shall be filled into pouches in the proportions listed in the formulation (3.3.1). The soup base, dehydrated chicken, and noodles shall not be mixed together before filling.

3.4 Pouch filling and sealing. The product shall be filled and sealed in pouches such as to meet the requirements in 3.5 and MIL-P-44276.

3.5 Finished product requirements. The finished product shall comply with the following requirements:

a. There shall be no foreign material such as, but not limited to, dirt, insect parts, hair, wood, glass, or metal.

b. There shall be no foreign odor or flavor such as, but not limited to, burnt, scorched, stale, sour, rancid, moldy, or caramelized.

c. There shall be no color foreign to the product.

d. The contents of each pouch shall weigh not less than 18.0 grams and not greater than 24.0 grams.

e. There shall be not less than 5.0 percent of chicken pieces and not greater than 65.0 percent of noodles in a pouch.

Source: https://assist.dla.mil -- Downloaded: 2026-10-22T01:11Z
Check the source to verify that this is the current version before use.

f. The soup base shall have a uniform yellowish color.

g. The soup base shall be a uniformly blended, free flowing mixture.

h. The sodium content of the finished product shall be not greater than 3900 mg/100 g.

i. The moisture content of the finished product shall be not greater than 5.0 percent by weight.

j. The finished product, when rehydrated as specified in footnote 2 under table I, shall have the flavor, odor, and appearance typical of chicken noodle soup.

3.5.1 Palatability. The product shall be equal to or better than the approved preproduction sample (see 6.1) in palatability and overall appearance.

3.6 Plant qualification. The product shall be prepared, processed and packaged in establishments meeting the requirements of Title 21, Code of Federal Regulations, Part 110, "Current Good Manufacturing Practice in Manufacturing, Processing, and Packaging or Holding of Human Foods", and the plant sanitation requirements of the appropriate Government inspection agency.

3.7 Federal Food, Drug, and Cosmetic Act. All deliveries shall conform in every respect to the provisions of the Federal Food, Drug, and Cosmetic Act and regulations promulgated thereunder.

4. QUALITY ASSURANCE PROVISIONS

4.1 Contractor's responsibility. Inspection and acceptance by the USDA shall not relieve the contractor of obligation and responsibility to deliver a product complying with all requirements of this document. The contractor shall assure product compliance prior to submitting the product to the USDA for any inspection.

4.2 Inspection and certification. Product acceptability shall be determined by the USDA. The USDA will determine the degree of supervision necessary to assure compliance with the requirements of this document.

4.3 Classification of inspection. The inspection requirements specified herein are classified as follows:

a. First article inspection (see 4.4).
b. Quality conformance inspection (see 4.5).

Source: https://assist.dla.mil -- Downloaded: 2026-10-22T01:11Z
Check the source to verify that this is the current version before use.

4.4 First article inspection. When a first article is required (see 6.1), it shall be inspected in accordance with the quality assurance provisions of this document and evaluated for overall appearance and palatability. Any failure to conform to the quality assurance provisions of this document or any appearance or palatability failure shall be cause for rejection of the first article.

4.5 Quality conformance inspection. Unless otherwise specified, sampling fo inspection shall be performed in accordance with MIL-STD-105.

4.5.1 Component and material inspection. In accordance with 4.1, components and materials shall be inspected in accordance with all the requirements of referenced documents unless otherwise excluded, amended, modified, or qualified in this document or applicable purchase document.

4.5.1.1 Ingredient and component examination. Conformance of ingredients and components to identity, condition, and other requirements specified in 3.2 shall be certified by the ingredient supplier or ingredient manufacturer, or compliance be verified by examination of pertinent labels, markings, U.S. Grade Certificates, certificates of analyses, or other such valid documents acceptable to the inspection agency. If necessary, each ingredient shall be examined organoleptically or inspected according to generally recognized test methods, such as the standard methods described in the Official Methods of Analysis of the Association of Official Analytical Chemists and in the Approved Methods of the American Association of Cereal Chemists, to determine conformance to th condition requirements. Any nonconformance to an identity, condition, or r requirement shall be cause for rejection of the ingredient or component lot or of any involved product.

4.5.2 In-process examination. In-process examination shall be performed to determine conformance to the preparation, processing, and filling requirements. Any nonconformance revealed by actual examination or by review of records of time, temperature, and formulation or of other valid documents shall be cause for rejection of the involved product.

4.5.3 Net weight inspection. The net weight of the filled and sealed pouches shall be determined by weighing each sample unit on a suitable scale tared with a representative empty pouch. Results shall be reported to the nearest 0.1 gram. any individual net weight of less than 18.0 grams or more than 24.0 grams shall be scored as a defect. The lot size shall be expressed in pouches. The sample unit shall be one filled and sealed pouch. The inspection level shall be S-3 and the acceptable quality level (AQL), expressed in terms of defects per hundred units, shall be 2.5.

4.5.4 Chicken and noodle content inspection. The chicken and noodle content of the dry product shall be determined as follows: Twenty filled and sealed pouches shall be selected at random from the lot. The contents of the 20 pouches shall be weighed and the chicken pieces and noodles separated and

Source: https://assist.dla.mil - Downloaded: 2026-10-22T01:11Z
Check the source to verify that this is the current version before use.

weighed separately. The percent chicken pieces and noodles shall be determined and reported to the nearest 0.1 percent. Less than 5.0 percent chicken pieces and/or more than 65.0 percent noodles shall be cause for rejection of the lot.

4.5.5 Product inspection. The finished product shall be examined for the defects listed in table I. The lot size shall be expressed in pouches. The sample unit shall be the contents of one filled and sealed pouch. The inspection level shall be S-3 and the AQL, expressed in terms of defects per hundred units, shall be 1.5.

TABLE I. Product defects 1/

Category	Defect
Major	Dry product
101	Soup base not of specified color.
102	Soup base not uniformly blended and free flowing.
	Rehydrated product 2/
103	Flavor, odor and appearance not typical of chicken noodle soup.

1/ The presence of foreign material (e.g. glass, dirt, insect parts, hair, wood, metal), foreign odor or flavor (e.g. burnt, scorched, moldy, rancid, sour, stale, caramelized), or foreign color shall be cause for rejection of the lot.

2/ For defect 103, select one pouch from the sample and rehydrate the contents with 10 ounces of boiling water and wait 2 minutes. Presence of this defec shall be cause for rejection of the lot.

4.5.6 Product testing. The instant soup mixture shall be tested for sodium as specified in 4.5.6.1 and for moisture as specified in 4.5.6.2. The lot size shall be expressed in units of pouches. The sample unit shall be four filled and sealed pouches. The inspection level shall be S-2 and the AQL, expressed i terms of defects per hundred units, shall be 1.5. Any result not conforming to the moisture or sodium content requirement specified in 3.5 shall be scored as major defect.

4.5.6.1 Sodium content test. The sodium content shall be determined in accordance with the Plant Chapter of the Official Methods of Analysis of the Association of Official Analytical Chemists. The results shall be reported to the nearest milligram.

Source: https://assist.dla.mil -- Downloaded: 2026-10-22T01:11Z
Check the source to verify that this is the current version before use.

4.5.6.2 Moisture content test. The moisture content shall be determined in accordance with the Cereal Foods Chapter, total solids (moisture indirect method) section, vacuum oven method of the Official Methods of Analysis of the Association of Official Analytical Chemists. The results shall be reported to the nearest 0.1 percent.

4.5.7 Packaging inspection. Inspection of packaging shall be in accordance with the quality assurance provision of MIL-P-44276.

5. PACKAGING

5.1 Packaging. Packaging shall be in accordance with the requirements of MIL-P-44276.

6. NOTES

6.1 Ordering data. Acquisition documents should specify the following:

a. Title, number, and date of this document.
b. When a first article is required (see 3.1, 4.4, and 6.2).
c. Provisions for approved preproduction samples (see 3.5.1 and 6.2).

6.2 First article. When a first article sample is required, it shall be inspected and approved under the appropriate provisions of DAR 7-104.55. The first article should be a preproduction sample. The contracting officer shall specify the appropriate type of first article and the number of units to be furnished. The contracting officer should include specific instructions in all acquisition documents regarding arrangements for selection, inspection, and approval of the first article.

6.3 Vegetable protein, hydrolyzed. The hydrolyzed vegetable protein used in in-house productions was LUXOR KB-500V, manufactured by Hercules Inc. or 3H3 manufactured by Nestle Inc. Other HVP's may be equally acceptable.

6.4 Starch and dextrin blend. Instant starch and dextrin blend (50:50) used in in-house production was Instant 721-A manufactured by Amaizo Inc. or Instant Clear Jel Manufactured by National Starch and Chemical Corporation, and Maltrin 040 manufactured by Grain Processing Corp. Other blends may be equally acceptable.

6.5 Egg noodles, extra fine, instant. Instant, extra fine, egg noodles used in in-house production, were produced by Maruchan Incorporated. Other dehydrated noodles, meeting the requirements of 3.2.1 may be equally acceptable.

6.6 Shortening, vegetable, powdered. Powdered vegetable shortening (PVS) used in in-house production was either Beatreme 2784Z or NDX11ZV, manufactured by Beatrice Food Ingredients. Other PVS's meeting the requirements of 3.2.7 may be equally acceptable.

Source: https://assist.dla.mil -- Downloaded: 2026-10-22T01:11Z
Check the source to verify that this is the current version before use.

6.7 Fat, chicken, rendered. Rendered chicken fat used in in-house production was Beatreme 1375-B, manufactured by Beatrice Food Ingredients. Other rendered chicken fats meeting the requirements of 3.2.9 may be equally acceptable.

6.8 Chicken meat solids, dried. Dry chicken meat solids used in in-house production were Beatreme 3160 manufactured by Beatrice Food Ingredients. Other dry chicken meat solids meeting the requirements of 3.2.15 may be equally acceptable.

6.9 Subject term (key word) listing.

INSTRUCTIONS: In a continuing effort to make our standardization documents better, the DoD provides this form for submitting comments and suggestions for improvements. All users of military standardization documents are invited to p suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge *(DO NOT STAPLE,* mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretatio too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate th problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

NOTE: This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification o specification requirements on current contracts. Comments submitted on this form do not constitute or imply authoriza to waive any portion of the referenced document*(s)* or to amend contractual requirements.
