DATA ITEM DESCRIPTION
Title: CONTRACTOR ENGINEERING PROGRAM PLAN

Number: DI-SESS-82195
AMSC Number: N9912
DTIC Applicable: N/A
Preparing Activity: SH
Applicable Forms: N/A

Approval Date: 20180418
Limitation: N/A
GIDEP Applicable: N/A
Project Number: SESS-2018-006

Use/Relationship: The Contractor's Engineering Program Plan describes the contractor's overall Engineering and Configuration Management (CM) program, how it is organized, how it will be conducted, and the interrelationships between the Engineering and Configuration Management programs. The principal use is to provide the government a basis for review, evaluation and monitoring of the program.

This data item description (DID) contains the format and content preparation instructions for the data product generated by the specific and discrete task requirement as delineated in the contract.

Requirements:

1. Format. The Contractor's Engineering Program Plan shall be in contractor's format.

2. Content. The Contractor's Engineering Program Plan shall identify the contractor's engineering and CM program organization, the methods, procedures, and controls that shall be employed, as well as the various government-approved engineering tasking that may be assigned.

2.1. The plan shall include details of the contractor process and the interactions with the procuring activity Project Process.

2.2. The plan shall contain Engineering and CM procedures for the following:

a. Resolving Operation and Maintenance (O&M) hardware, software, and firmware problems for systems that are still being actively used and for equipment that is inoperable and requires engineering expertise.

b. Engineering, installation, integration and surveying or drafting support for contract equipment, systems and facilities.

c. Developing and installing Temporary Engineering Changes (TECs), Engineering Change Proposals (ECPs), Notices of Revision (NORs), and Specification Change Notices (SCNs).

d. Performing Naval Surface Warfare Center (NSWC), Corona approved engineering tasking, which include the following:

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:00Z
Check the source to verify that this is the current version before use.

(1) Bringing new, inoperative, or "mothballed" equipment or systems to operational status.

(2) Relocating, re-configuring, installing, modifying, and integrating contract equipment, systems, and facilities to meet new operational requirements, facility build-up, and range configuration and development changes.

(3) Implementing approved system modifications, enhancements, and upgrade (e.g., System Life-cycle Extension Program, Inspect and Replace).

e. Maintaining an on-line master Engineering Project Status Listing.

f. Maintaining, inventorying, and controlling the contents of the Technical Library and the on-line electronic Document Database, available to the government.

g. Establishing an active Configuration Control Board (CCB) consisting of both NSWC and contract personnel, establishing CCB review and approval processes.

h. Evaluating contract requirements, contract equipment, systems, facilities, and associated technical data/documentation to establish appropriate levels of identifiers for use in management and configuration of each applicable contract item.

i. Defining and identifying the type and level of system configuration information that is necessary for control of each piece of contract equipment, system, or facility.

2.3. The plan shall identify the Configuration Management program in accordance with the contractor's processes and procedures. The ANSI/EIA-649, National Consensus Standard for Configuration Management (paragraphs 5.2.5 and 5.3.3) may be useful in defining content.

2.4. It plan shall also include how CM will be conducted, and the methods and controls for effective identification, change control, status accounting, and audits.

End of DI-SESS-82195
