1/ Each relay possesses high level and low level capabilities. However, relays previously tested or used above 10 mA resistive at 6 V dc maximum or peak ac open circuits are not recommended for subsequent use in low level applications.

2/ The suffix letter L, M, P, or R to designate the applicable failure rate level shall be added to the applicable listed dash number. Failure rate level (percent per 10,000 operations): L, 3.0; M, 1.0; P, 0.1; R, 0.01. Example, 001L - - - - - - - - -003R.

3/ CAUTION: The use of any coil voltage less than the rated coil voltage will compromise the operation of the relay.

	M39016/14-003	2 units, qualification inspection table, Q1, and shock, vibration, acceleration, terminal strength, and seal.

1/ For retention of qualification or extension of qualification to lower failure rate, all life test data accumulated on MIL-PRF-39016/53 and MIL-PRF-39016/54 may be used in addition to MIL-PRF-39016/14 data. Prior to retention of qualification testing, the relay manufacturer shall preselect the sampling plans.

2/ The number of units required for qualification testing shall be increased as required in group IV, table II, MIL-PRF-39016, if the relay manufacturer elects to test the number of units permitting one or more failures. Prior to qualification testing, the relay manufacturer shall preselect the sampling plan.

Qualification inspection (reduced testing) and sample size: See table III. If the relays produced for MIL-PRF-39016/14 are similar in construction and design except for the diodes and coils to the relays produced for MIL-PRF-39016/53 and MIL-PRF-39016/54, then reduced testing for qualification of MIL-PRF-39016/14 relays may be performed concurrent with or subsequent to successful qualification of MIL-PRF-39016/53 and MIL-PRF-39016/54.

TABLE III. Qualification inspection (reduced testing).
