DEPARTMENT OF DEFENSE
ARLINGTON, VIRGINIA 22209

ALLOY DESIGNATION SYSTEM FOR WROUGHT AND CAST COPPER AND COPPER ALLOYS
MIL-STD-455

1. This standard has been approved by the Department of Defense and is mandatory for use by the Departments of the Army, the Navy, and the Air Force.

2. Recommended corrections, additions, or deletions should be addressed to the Army Materials and Mechanics Research Center, Watertown, Mass. 02172, Attention AMXMR-LS.

FOREWORD

The five-digit designation system described herein is the Unified Numbering System (UNS) for Metals and Alloys developed jointly by the American Society for Testing and Materials and the Society of Automotive Engineers to provide a unified numbering system for all commercial metals and alloys. This supersedes the three-digit designation system developed by what is now the Copper Development Association and adopted for use 1 August 1961.

This document provides a cross-reference of copper and copper alloy numbers, previous commonly accepted trade names, and Federal and Military specifications.

1. SCOPE

1.1 This standard covers a uniform five-digit system for designating wrought and cast copper and copper alloys, cross-referenced to previous commonly accepted trade names and Federal and Military specifications.

1.1.1 Application. This standard is to be used as a cross-reference only. All contracts and orders for wrought and cast copper and copper alloys should refer to the applicable specifications, and the designations used should be those appearing therein. Copper and copper alloy numbers should not be used unless used in the applicable specification. Conversion to the UNS system is explained in 5.1.

1.1.2 Exclusions. The following materials are specifically excluded:

(a) Standard coppers and copper alloys not covered by a Federal or Military specification.

(b) Coppers and copper alloys covered by a Federal or Military specification that are not considered standard by industry.

(c) Powder alloys.

2. REFERENCED DOCUMENTS

2.1 SPECIFICATIONS. The specifications listed in tables I, II, and III form a part of this standard to the extent specified herein.

3. DEFINITIONS. Not applicable.

4. GENERAL STATEMENT. Not applicable.

5. DETAIL REQUIREMENTS

5.1 COPPER AND COPPER ALLOY CODING SYSTEM. The numerical designation for each copper and copper alloy consists of the letter "C" and five digits. The letter "C" denotes copper. The first three digits are the same as the three-digit designation appearing in the previous issue of this standard. The final two digits, currently "00", permit the flexibility required for the addition of future coppers and alloys. The individual digits have no significance in themselves. Materials of similar composition, however, are generally grouped together. For instance, coppers are numbers C10100 through C15000 and copper-nickel alloys are numbers C70200 through C72500. New numbers are added by assigning an unused number within each general group.

5.2 CROSS-REFERENCES. Table I lists copper and copper alloy numbers and previous commonly accepted trade name together with the applicable Federal and Military specification designation. Where there is no entry in the "Previous Commonly Accepted Trade Name" column, no name has been officially recognized by the industry. Table II lists Federal Specification numbers and titles and equivalent copper numbers or copper alloy numbers. Table III

Check the source to verify that this is the current version before use.

lists Military specification numbers and titles and equivalent copper numbers or copper alloy numbers. The issue designation letter of Government specifications has been included since changes in the specification alloy designation or composition would otherwise cause the reference in this standard to be confusing or useless.

Table I. Cross reference of UNS (copper or copper alloy) number, previous commonly accepted trade name, and specification number.

NOTE. The compositional limits of the referenced specification alloy may not be identical to those of the listed UNS number. Though not directly interchangeable in these cases, such alloys may be considered to be approximately equivalent.

Table III. Cross reference of Military specification number, title, alloy designation, and UNS (copper or copper alloy number). (Continued)

Specification No.	Specification Title	Specification Alloy Designation	UNS Number (Copper or Copper Alloy No.)
MIL-B-24480	Bronze, Nickel-Aluminum Castings, for Seawater Service	----------	C95700, C95800
MIL-T-46072A	Tube, Round, Copper Alloy Numbers 330, 331, 332, and 370 (Leaded Brass), Seamless	Alloy no. 330 Alloy no. 331 Alloy no. 332 Alloy no. 370	C33000 C33100 C33200 C37000
MIL-C-46087A	Copper Alloy Number 175 (Copper-Cobalt-Beryllium) Bar and Rod	----------	C17500
MIL-C-81021	Copper-Cobalt-Beryllium Alloy (Copper Alloy No. 175), Strip	----------	C17500
MIL-C-81519	Castings: Copper Alloy (CDA No. 717) (Copper-Nickel-Beryllium)	----------	C96600

a/ The following copper numbers are applicable: 101, 102, 104, 105, 110, 111, 114, 116, 120, 121, 122, 123, 125, 127, 128, and 130.

b/ The following copper and copper alloy numbers are applicable: 102, 110, 220, 268, 464, 510, and 618.

c/ No equivalent UNS number.

d/ The following copper and copper alloy numbers are applicable: 101, 102, 120, 122, 220, and 702.
