DATA ITEM DESCRIPTION

Title: DEFENSIVE CYBERSPACE OPERATIONS FOR SPACE (DCO-S) INTERFACE CONTROL DOCUMENT (ICD)

Number: DI-SESS-82552
AMSC Number: 10686
DTIC Applicable: No
Preparing Activity: 19 (SSC)
Applicable Forms: N/A

Approval Date: 20260805
Limitation: N/A
GIDEP Applicable: No
Project Number: SESS-2026-041

Use/relationship: The Interface Control Document (ICD) provides a formal record of all interface information required to integrate a United States Space Force (USSF) mission system with the Defensive Cyberspace Operations for Space (DCO-S) suite of capabilities (e.g., Manticore, Kraken). The ICD serves as the standardized framework for capturing the details associated with the integration of mission systems with the Defensive Cyberspace Warfare (DCW) operations.

a. The ICD provides a record of all interface information, technical specifications, drawings, diagrams, tables, protocols, and requirements necessary for integration, and ensuring compatibility and compliance with cybersecurity standards.
b. The ICD DID contains the format, content, and intended use information for the data deliverable resulting from the task described in the solicitation.

Requirements:

1. Reference Documents. The applicable issue of the documents cited herein, including their approval dates and dates of any applicable amendments, notices, and revisions, shall be as specified in the contract.
2. Format. The ICD shall be prepared using the Government-provided DCO-S ICD Template.
3. Content. The ICD shall contain an accurate and complete set of information defining the mission system interface to the DCO-S suite:
    a. Scope: A definition of the systems and interfaces covered by the ICD, a statement of the ICD's purpose, and an identification of system boundaries.
    b. Change Control Process: Describe the formal change control process for ICD modifications.
    c. Revision History: A record of all document versions, release dates, authors, and a description of changes.
    d. Applicable Documents: A comprehensive list of all referenced documents:

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T11:04Z
Check the source to verify that this is the current version before use.

(1) Governing Directives and Policies: Relevant DoD, DAF, USSF, and organizational policies governing integration, data handling, and security (e.g., DoDI 8510.01, NIST SP 800-53).

(2) Technical Standards and Frameworks: Industry standards (e.g., ISO 27001), threat modeling frameworks with versions (e.g., MITRE ATT&CK, Aerospace SPARTA), and data exchange formats (e.g., STIX, JSON, Syslog).

(3) System-Specific Documentation: A listing of key system documents such as the System Security Plan (SSP), Security Assessment Report (SAR), Plan of Action and Milestones (POA&M), Interconnection Security Agreements (ISAs), Mission Relevant Terrain – Cyber (MRT-C) analysis and other ICDs.

e. Mission System Overview:

(1) System Identification: The official name, purpose, functionality, and a high-level description of the mission system.

(2) Points of Contact: A list of key personnel, the Mission System Owner, DCO-S PMO Representative, System Defender and ICD Author/Maintainer with their roles and responsibilities defined.

(3) System Components: Comprehensive lists of all hardware (type, manufacturer, model, OS), software (name, version, vendor) within the system's accreditation boundary, Network topology and Security Architecture (descriptions, data flow illustrations, security domains, classification levels, internal/external connectivity, accreditation boundary, and location of Task Critical Assets).

(4) Planned System Upgrades and Modifications: A description of any planned modifications to the system architecture and their potential impact on the ICD.

f. Interface Definitions (Physical and Functional Relationships):

(1) Physical / On-Premises Systems Interface: Detailed specifications for the Test Access Point (TAP)-hardware interface, tables containing mission components, devices (Type, Manufacturer, Model), Aggregators, and One-Way Data Diodes (OWDD), with unique IDs mapping to integration drawings.

(2) Cloud-Based Systems Interface: Detailed specifications for the cloud-native interface, data transfer protocol, interface information, transfer method (e.g., S3 Replication, Lambda) and data write frequency.

(3) Security Orchestration Automation & Response (SOAR) / Endpoint Detection & Response (EDR) Integration Details (product information, component details, pre-approved actions).

g. Integration Drawings: Logical and physical diagrams that depict the end-to-end integration of the mission system with DCO-S capabilities, clearly labeling and referencing all components defined in the interface tables.

Check the source to verify that this is the current version before use.

h. Data Exchange Control and Management: Document the strategy for change management, versioning, compatibility, validation and verification.

i. Data Requirements:

(1) Data Identification Process: A description of the process used to identify cybersecurity-relevant data, which involves threat modeling and detection, mapping threats to the system architecture, and focusing on data from TCAs from MRT-C analysis.

(2) Detailed Event Specifications: A description of the event and the reason for its collection, the data format as it exists on the source system and the format in which it will be sent, and a raw sample of the event data to ensure correct parsing and analysis for each data element.

(3) Data Element Categories: A detailed catalog of each data element (event source, description, rationale for collection, criticality, collection format, interface format), organized by categories such as Information Technology, Wire Data, Mission System Data, Operational Technology, Environmental Data, and SOAR/EDR Data.

j. Compliance and Testing: Detailed requirements for documenting the procedures that verify and validate the interface's functionality and compliance with established standards.

k. Preparation for Delivery: Detailed requirements, procedures, schedules, and key milestones associated with the delivery and installation of the interface components.

l. Interface Record: All reference documentation in this section shall be delivered to the contracting representative who will disseminate to the mission system PMO, the DCO-S PMO and SSIO. Provide a cross-reference listing of all released/approved ICDs for the mission system and to which systems elements they apply.

End of DI-SESS-82552
