ADOPTION NOTICE

ISO/IEC 26702: 2007, **Systems engineering – Application and management of the systems engineering process**, was adopted on 30-JUL-2009. It replaces the IEEE 1220, Management of the Systems Engineering Process, Standard for' which was adopted on 20-AUG-2002 for use by the Department of Defense (DoD). For suggestions or queries by DoD activities, please contact the Systems Engineering office of the DoD Adopting Activity: ODDR&E, 3030 Defense Pentagon, 3B938, Washington D. C. 20301-3090.

Copies of this document may be purchased from http//:webstore.ansi.org or International Organization for Standardization, 25 West 43rd Street, New York, NY 10036, (212) 642.4900. Check for discount.

ISO/IEC 26702 defines the interdisciplinary tasks which are required throughout a system's life cycle to transform customer needs, requirements and constraints into a system solution. In addition, it specifies the requirements for the systems engineering process and its application throughout the product life cycle. ISO/IEC 26702 focuses on engineering activities necessary to guide product development, while ensuring that the product is properly designed to make it affordable to produce, own, operate, maintain and eventually dispose of without undue risk to health or the environment.

This edition cancels and replaces the first edition (IEEE 1220:1998), which has been technically revised. It is equivalent to the IEEE 1220:2005 update and is to further harmonize with the ISO/IEC 15288: 2002 version by illustrating similarities and differences. Further updates are planned for future harmonization with the ISO/IEC 15288: 2008.

ISO/IEC 26702 is a joint effort by the IEEE Computer Society's Software and Systems Engineering Standards Committee and the Joint Technical Committee ISO/IEC JTC 1, Information technology, Subcommittee SC 7, Systems and Software Engineering. INCOSE also participated.

Custodians:
Army – AM
Navy – AS
Air Force – 10

Adopting Activity:
OUSD (AT&L) SE
(Project #SESS-2009-017)

Area: SESS
