FEDERAL SPECIFICATION

WIRE ROPE AND STRAND

This specification was approved by the Commissioner, Federal Supply Service, General Services Administration, for use by all Federal agencies.

1. SCOPE AND CLASSIFICATION

1.1 Scope. This specification covers wire ropes and wire seizing strands (see 6.1). This specification does not include all types, classes, and so forth, of wire rope and strand which are commercially available, but it is intended to cover the more common types, classes, and so forth, which are suitable for Federal Government use.

1.2 Classification.

1.2.1 Types, classes, constructions, and sizes. Wire ropes and wire seizing strands covered by this specification shall be of the following types, classes, constructions, and sizes as specified (see 6.2 and tables L and LI). For general rules for selection of wire rope and strand (see 3.5, 6.3, and tables L and LI). For wire rope and strand definitions and terms, (see 6.4).

Type I. - General purpose wire ropes.
- Class 1. -6 by 7.
- Class 2. -6 by 19.
  - Construction 1. -6 by 19 (2 operations).1/
  - Construction 2. -6 by 19 Warrington.1/
  - Construction 3. -6 by 19 Seale.
  - Construction 4. -6 by 19 Filler wire.1/
  - Construction 5. -6 by 19 Warrington-Seale.
- Class 3. -6 by 37.
  - Construction 1. -6 by 37 (3 operations).1/
  - Construction 2. -6 by 37 (2 operations).1/
  - Construction 3. -6 by 37 Seale (2 operations).1/
  - Construction 4. -6 by 37 Filler wire.1/
  - Construction 5. -6 by 37 Seale-Warrington.1/

1/ These constructions have size and lay type limitations, or both. (See 3.5, 6.3.9 and the pertinent descriptive paragraph for each construction.)

Source: https://assist.dla.mil -- Downloaded: 202640-26T12:10Z
Check the source to verify that this is the current version before use.

Construction 6. -6 by 37 Warrington-Seale.
Construction 7. -6 by 37 Seale-Filler wire.1/
Construction 8. -6 by 37 Filler wire-Seale.1/
Construction 9. -6 by 37 Seale-Warrington-Seale.1/
Class 4. -8 by 19.
Construction 1. -8 by 19 (2 operations).1/
Construction 2. -8 by 19 Warrington.1/
Construction 3. -8 by 19 Seale.
Construction 4. -8 by 19 Filler wire.1/
Construction 5. -8 by 19 Warrington-Seale.1/
Class 5. -6 by 61.
Construction 1. -6 by 61 (3 operations).1/
Construction 2. -6 by 61 (2 operations).1/
Construction 3. -6 by 61 (2 operations).1/
Construction 4. -6 by 61 Filler wire-Seale.1/
Construction 5. -6 by 61 Seale-Warrington-Seale.1/
Construction 6. -6 by 61 Seale-Filler wire-Seale.1/
Class 6. -6 by 91.
Construction 1. -6 by 91 (4 operations).1/
Construction 2. -6 by 91 (3 operations).1/
Construction 3. -6 by 91 (3 operations).1/
Construction 4. -6 by 91 (2 operations).1/
Type II. -Elevator.
Class 1. -6 by 19.
Construction 1. -6 by 19 Warrington.1/
Construction 2. -6 by 19 Filler wire.1/
Construction 3. -6 by 19 Warrington-Seale.1/
Class 2. -8 by 19.
Construction 1. -8 by 19 (2 operations).1/
Construction 2. -8 by 19 Warrington.1/
Construction 3. -8 by 19 Seale.
Construction 4. -8 by 19 Filler wire.1/
Construction 5. -8 by 19 Warrington-Seale.1/
Type III. -Marine (cables).
Class 1. -6 by 6 deck lashing ropes.
Class 2. -6 by 12 running ropes.
Class 3. -6 by 24 mooring lines.
Construction 1. -6 by 24 (2 operations).
Construction 2. -6 by 24 Warrington.
Construction 3. -6 by 24 Seale.
Class 4. -6 by 3 by 7 spring lay.
Class 5. -6 by 3 by 19 spring lay.
Construction 1. -6 by 3 by 19 (2 operations).
Construction 2. -6 by 3 by 19 Warrington.
Construction 3. -6 by 3 by 19 Seale.
Class 6. -6 by 42 tiller or hand control ropes.

1/ These constructions have size and lay type limitations, or both. (See 3.5, 6.3.9 and the pertinent descriptive paragraph for each construction.)

Type IV. -Miscellaneous.
Class 1. -5 by 19 marline-clad.
Construction 1. -5 by 19 (2 operations).
Construction 2. -5 by 19 Warrington.
Construction 3. -5 by 19 Filler wire.
Class 2. -18 by 7 rotation resistant.
Class 3. -flattened strand.
Construction 1. -6 by 25 style B.
Construction 2. -6 by 30 style G.
Construction 3. -6 by 27 style H.
Construction 4. -6 by 31 style V.
Class 4. -8 by 19 rotation resistant.
Construction 1. -8 by 19 Seale.
Construction 2. -8 by 19 Filler wire.
Construction 3. -8 by 19 Warrington-Seale.
Type V. -Auxiliary wire strands.
Class 1. -1 by 7 seizing strand.
Class 2. -1 by 19 seizing strand (2 operations).
Type VI. -Small cords.2/
Class 1. -3 by 7.1/
Class 2. -7 by 7 (6 by 7 wire strand core).1/
Class 3. -7 by 19 (6 by 19 wire strand core) (2 operations).1/

2. APPLICABLE DOCUMENTS

2.1 Issues of documents. The following documents, of the issue in effect on date of invitation for bids or request for proposal, form a part of this specification to the extent specified herein:

Federal Specifications:

QQ-B-750 - Bronze, Phosphor; Bar, Plate, Rod, Sheet, Strip, Flat Wire, and Structural and Special Shaped Sections.
QQ-S-781 - Strapping, Steel, and Seals.
LLL-B-810 - Building Board, (Hardboard) Hard Pressed, Vegetable Fiber.
PPP-B-1055 - Barrier Material, Waterproofed, Flexible.
PPP-V-205 - Veneer, Paper Overlaid, Container Grade.

Federal Standards:

FED-STD-66 - Steel: Chemical Composition and Hardenability.
FED-STD-123 - Marking for Shipment (Civil Agencies).
FED-STD-151 - Metals; Test Methods.

1/ These constructions have size and lay type limitations, or both. (See 3.5, 6.3.9 and the pertinent descriptive paragraph for each construction.)
2/ This type is not intended for use in aircraft control systems. For such wire rope, see MIL-W-83420.

Check the source to verify that this is the current version before use.

(Activities outside the Federal Government may obtain copies of Federal specifications, standards, and commercial item descriptions as outlined under General Information in the Index of Federal Specifications, Standards and Commercial Item Descriptions. The Index, which includes cumulative bimonthly supplements as issued, is for sale on a subscription basis by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

(Single copies of this specification, and other Federal specifications and commercial item descriptions required by activities outside the Federal Government for bidding purposes are available without charge from General Services Administration Business Service Centers in Boston; New York; Philadelphia; Washington, DC; Atlanta; Chicago; Kansas City, MO; Fort Worth; Houston; Denver; San Francisco; Los Angeles; and Seattle, WA.

(Federal Government activities may obtain copies of Federal standardization documents and the Index of Federal Specifications, Standards and Commercial Item Descriptions from established distribution points in their agencies.)

Military Specifications:

MIL-P-24216 - Polypropylene Cores, Strand Centers and Substrands for Wire Rope.
MIL-C-52950 - Crates, Wood, Open and Covered.
MIL-W-83420 - Wire Rope, Flexible, for Aircraft Control.

Military Standard:

MIL-STD-163 - Steel Mill Products Preparation for Shipment and Storage.

(Copies of Military specifications and standards required by contractors in connection with specific procurement functions should be obtained from the procuring activity or as directed by the contracting officer.)

2.2 Other publications. The following documents form a part of this specification to the extent specified herein. Unless a specific issue is identified, the issue in effect on date of invitation for bids or request for proposal shall apply:

ASTM
E 8 - Tension Testing of Metallic Materials. (DoD adopted)

(Application for copies should be addressed to the ASTM, 1916 Race Street, Philadelphia, PA 19103.)

NATIONAL MOTOR FREIGHT TRAFFIC ASSOCIATION, INC., AGENT
National Motor Freight Classification

(Application for copies should be addressed to the National Motor Freight Traffic Association, Inc., ATA TRAFFIC Dept., 1616 "P" Street, NW, Washington, DC 20036.)

Check the source to verify that this is the current version before use.

UNIFORM CLASSIFICATION COMMITTEE AGENT
Uniform Freight Classification Ratings, Rules and Regulations

(Application for copies should be addressed to the Uniform Classification Committee Agent, Tariff Publication Officer, Room 1106, 222 South Riverside Plaza, Chicago, IL 60606.)

3. REQUIREMENTS

3.1 Material. Wire rope and strand shall be made of iron, annealed steel, traction steel, improved plow steel, extra improved plow steel, phosphor bronze, or corrosion-resistant steel as specified in the detail requirements for the individual wire ropes and strands.

3.1.1 Iron, annealed steel, traction steel, improved plow steel, and extra improved plow steel. Material shall be free from defects which might be detrimental to its appearance or serviceability. Steel for wires shall be made by either the open-hearth, basic oxygen, or electric furnace process.

3.1.2 Phosphor bronze. Unless otherwise specified (see 6.2), phosphor bronze shall be in accordance with composition A of QQ-B-750.

3.1.3 Corrosion-resistant steel. Corrosion-resistant steel wire ropes shall be made of wires of 302 or 304 composition as specified in FED-STD-66.

3.1.4 Recovered materials. The offeror/contractor is encouraged to use recovered materials in accordance with Public Law 94-580 to the maximum extent practicable.

3.2 Wire-rope cores and centers for wire strands. Wire-rope cores and centers for wire strands shall be as specified in 3.2.1 through 3.2.5 for the individual wire ropes and strand centers.

3.2.1 Fiber core (see figure 1). Fiber core for wire rope shall be one of the hard fibers or polypropylene fiber. The hard fibers are manila (abaca) and sisal (African, Java, Mauritius, Mexican, and Yucatan). Cotton, hemp or jute fibers, hard laid, may be used in wire-rope cores in fiber sizes of 1/8 inch in diameter and smaller. A mixture of two or more species of hard fibers may be used. Polypropylene fibers shall meet the requirements of MIL-P-24216. Fiber cores of wire ropes shall be thoroughly cleaned, free from waste, evenly twisted, and of uniform ply.

3.2.2 Wire-strand core (see figure 2). The number of wires in the wire-strand core shall be not less than the number of wires in the strands of the wire rope. Wires in the wire-strand core shall be of the same material, or of a lower tensile strength steel (see table I), as the wires in the strands of the wire rope. Iron or annealed steel shall not be used.

3.2.3 Independent wire-rope core (IWRC) (see figure 3). IWRC may be a 6 by 7 wire rope with either a fibrous or wire-strand (making it a 7 by 7) core. Six by 61 (type 1, general purpose, class 5) and 6 by 91 (type I, general purpose, class 6) wire rope shall have 19 wire strands instead of 7 wire strands (making it a 7 by 19) in the IWRC. Wire rope with an independent wire rope

Source: https://assist.dla.mil -- Downloaded: 202610-26T12:10Z
Check the source to verify that this is the currenversion before use.

core shall carry the letters IWRC in its description or designation. Wires in the IWRC shall be of the same material, or of a lower tensile strength steel (see table I), as the wires in the strands of the wire rope. Iron or annealed steel shall not be used.

3.2.4 Centers for wire strands. Centers in wire strands shall be either of a twisted fibrous material, or a single wire as outlined in the specific strand construction description. When this wire becomes so large (manufacturer's discretion) that it is considered undesirable, a 7 wire strand is allowed to replace it, as specified (see 6.2). This 7 wire strand center shall not increase the number of stranding operations of the main strand or the number of wires in the main strand wire count. Fiber centers for wire strands shall be as specified in 3.2.1.

3.2.5 Other material for cores and centers. When specified (see 6.2), asbestos fiber, glass fibers, plastic fibers, twisted and waxed kraft paper, spiral springs, or flexible plastic rods may be used in wire-rope cores and wire-strand centers.

3.3 Mechanical properties (see 3.9).

3.3.1 Tensile strength.

3.3.1.1 Wire ropes. Wire ropes covered in this specification shall meet or exceed the acceptance breaking strength requirements specified in the applicable table.

3.3.1.2 Main wires (load carrying). Where applicable, main wires in the main strands shall conform with the tensile strength requirements shown in table I.

3.3.1.3 Drawn galvanized wires. When drawn galvanized wire is ordered it shall conform to the tensile requirements for bright (uncoated) steel wire shown in table I. The weight of zinc coating shall conform to the requirements shown in table II.

3.3.2 Torsion strength. Where applicable, main wires in the main strands, either bright (uncoated) or drawn galvanized, shall conform to the minimum torsion requirements shown in table III.

3.3.3 Wrapping.

3.3.3.1 Rope wires of iron and steel grades, zinc-coated (galvanized) at finished size. Rope wires of iron and steel grades, zinc-coated at finished size, shall withstand wrapping in a close helix for six complete turns around a mandrel, followed by unwrapping without breakage or fracture of the wire. For zinc-coated iron wires, the mandrel shall be the same diameter as the wire. For zinc-coated steel wires, the mandrel shall be two times the diameter of the wire.

3.3.3.2 Rope wires of uncoated iron and phosphor bronze. Rope wires of uncoated iron and phosphor bronze shall withstand wrapping in a close helix for six complete turns around a mandrel having a diameter the same as the wire.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:10Z
Check the source to verify that this is the current version before use.

3.3.4 Prestretched (prestressed) wire rope. When specified (see 6.2), the wire rope shall be prestretched. The wire rope shall be subjected to three cycles of tensile loading the wire rope to 40 percent of the nominal strength for 5 minutes and returning the tensile load to 5 percent of the nominal strength between cycles. After the last cycle, the tensile load shall be completely released.

3.3.5 Finish.

3.3.5.1 Uncoated carbon steel. Unless otherwise specified (see 6.2), wire ropes shall be uncoated carbon steel.

3.3.5.2 Zinc coating (galvanized). When specified (see 6.2), zinc coating shall be applied by either the electrolytic-plating process or by hot dipping in molten zinc. The weight of the zinc coating shall be as specified in table II.

3.3.5.2.1 Zinc coating shall be free from uncoated spots, lumps, pits, blisters, gritty areas, dross, and flux.

3.4 Fabrication.

3.4.1 Wire rope. A wire rope shall consist of a specified number of wire strands closed around a core. Each strand shall be constructed as specified in the detail requirements for the individual class and construction.

3.4.1.1 Rope and strand wires. Wires in the same layer of wire ropes and strands shall be considered of one diameter, when the difference between the largest and the smallest diameters does not exceed the values shown in table IV.

3.4.2 Wire joints. Wires up to and including 0.014 inch in diameter may be spliced by twisting. Wires larger than 0.014 shall be joined by lap brazing or butt welding. Butt welds shall be annealed.

3.4.2.1 Twisted splices of wires of any one layer of a strand shall not be closer than 20 feet. Brazed or butt-welded joints in the wires of a strand shall not be closer than 18 inches.

3.4.3 Preformed and nonpreformed wire ropes and strands. Unless otherwise specified (see 6.2), the contractor shall supply either preformed or nonpreformed wire ropes and strands as specified in 3.4.3.1 and 3.4.3.2.

3.4.3.1 Preformed wire ropes and strands. Wire ropes in which the strands and their wires are permanently shaped during fabrication to a spiral form they assume in the finished wire rope or strand shall be identified as preformed wire ropes or strands.

3.4.3.2 Nonpreformed wire ropes and strands. Wire ropes in which the strands and their wires are not permanently shaped during fabrication to a spiral form they assume in the finished wire rope or strand shall be identified as nonpreformed wire ropes or strands.

3.4.4 Lays (see figure 4). Wire rope lays shall be as specified in the detail requirements for the individual wire ropes and strands.

Source: https://assist.dla.mil -- Downloaded: 202640-26T12:10Z
Check the source to verify that this is the currenversion before use.

3.4.4.1 Right regular lay. Wires in the strand are laid to the left, and strands in the rope are laid to the right.

3.4.4.2 Left regular lay. Wires in the strand are laid to the right, and strands in the rope are laid to the left.

3.4.4.3 Right lang lay. Both the wires in the strand and the strands in the rope are laid to the right.

3.4.4.4 Left lang lay. Both the wires in the strand and the strands in the rope are laid to the left.

3.4.4.5 Strand pitch. Strands in wire ropes shall have a pitch of not less than 5-1/2 times the nominal rope diameter. The maximum pitch shall be not more than specified in the applicable table. Three strand ropes shall have a pitch of not less than 4-1/2 times the nominal rope diameter.

3.5 Construction. Unless otherwise specified (see 6.2), the contractor may supply wire rope and strand of any construction applicable to the size rope or strand being furnished.

3.6 Lubrication.

3.6.1 Iron or traction steel wire rope for elevator service. Wires of iron or traction steel wire rope for elevator service shall be thoroughly coated with lubricant during the process of manufacture. The lubrication shall be compounded for each specific application so as not to restrict the rope's operating characteristics.

3.6.2 Uncoated iron or steel wire ropes. Unless otherwise specified (see 6.2), wires of uncoated (not galvanized) iron, or steel wire ropes, shall be thoroughly coated with a lubricant during the process of manufacture. The lubricant shall be compounded with additives to provide lubricating qualities and corrosion protection during shipping, storage, handling, and the initial period of service and suitable base for subsequent field relubrications. The lubricant shall be free from substances injurious to steel wires and fiber cores. For specific applications, iron or steel wire ropes may be specified to have no lubrication, or to have a special lubricant that is required for a special application. Where no lubrication is specified, a rust inhibiter shall be specified to prevent corrosion prior to installation.

3.6.3 Coated (galvanized) steel and iron, corrosion-resistant steel, and phosphor bronze wire ropes. Unless otherwise specified (see 6.2), coated (galvanized) steel and iron, corrosion-resistant steel, and phosphor bronze wire ropes may be lightly lubricated during fabrication.

3.6.3.1 Coated (galvanized) steel ropes. Coated (galvanized) steel ropes which are to be immersed in sea water shall be lubricated in accordance with 3.6.2.

3.6.4 Fiber centers and cores. Fiber centers and cores shall be thoroughly impregnated during fabrication with a lubricant which shall contain preservative materials to allay deterioration of fiber parts due to rot or mildew and shall not be injurious to the steel wires. This requirement is not applicable to polypropylene cores or centers.

Source: https://assist.dla.mil -- Downloaded: 202610-26T12:10Z
Check the source to verify that this is the current version before use.

3.6.5 Wire strand core and IWRC. Wire strand core and IWRC shall be thoroughly covered with a lubricant for protecting and preserving their wires.

3.7 Diameter of wire rope and strands. Except for type II elevator, type III spring lay, type IV marline clad, type V seizing strand and type VI small cord which are of special construction, the actual diameter of wire ropes and strands shall not differ from the ordered diameter by more than the amounts shown in tables V and VI.

3.7.1 Traction steel and iron elevator rope. The maximum diameter tolerance based on nominal rope diameter shall be as shown in the maximum (no load) column of the applicable table. With a load of 10 percent of minimum breaking strength, the minimum diameter tolerance based on nominal rope diameter shall be plus 1/128 inch.

3.8 Seizing. Each end of each length of wire rope shall be suitably seized.

3.9 Mechanical properties. Mechanical properties for wire in ropes and strands shall be as specified in tables I and III, except for filler wires, non-round wires, wires in wire strand cores, and wires in IWRC's (see 3.2.2 and 3.2.3).

3.10 Workmanship. Wire ropes shall be uniform in material and quality and shall be securely laid and free from kinks, loose wires, loose strands, or other defects which may be detrimental to their serviceability and appearance.

3.11 Type I, general purpose.

3.11.1 Type I, general purpose, class 1, 6 by 7 (see figure 5). Wire rope shall have 6 strands of 7 wires, totaling 42 wires, laid around a fiber core, as specified (see 3.2.1, 3.2.5, and 6.2).

3.11.1.1 Each strand shall have 1 wire center and 6 outer wires. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in one operation.

3.11.1.2 Material. Material shall be of improved plow steel or iron, as specified (see 3.1 and 6.2).

3.11.1.2.1 Finish. Wire ropes of iron shall be of zinc-coated (galvanized) wires; and unless a zinc-coating material is specified (see 3.3.5 and 6.2) improved plow steel shall be of uncoated (bright) wires.

3.11.1.3 Cores. Cores shall be of fiber as specified (see 3.11.1 and 6.2).

3.11.1.4 Fabrication. Wire ropes shall be fabricated as specified (see 3.4 and 6.2).

3.11.1.5 Lay. Unless otherwise specified (see 6.2), wire ropes shall be supplied with right regular lay (see 3.4.4).

3.11.1.6 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be as specified in tables VII and VIII.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:10Z
Check the source to verify that this is the current version before use.

3.11.2 Type I, general purpose, class 2, 6 by 19.

3.11.2.1 Material. Material shall be of improved plow steel, extra improved plow steel, corrosion-resistant steel, or phosphor bronze as specified (see 3.1 and 6.2).

3.11.2.1.1 Finish. Wire rope of phosphor bronze and corrosion-resistant steel shall be of uncoated (bright) wires. Wire rope of improved plow steel or extra improved plow steel shall be of uncoated (bright) or zinc-coated (drawn galvanized) wires as specified (see 3.3.1.3, 3.3.5, and 6.2).

3.11.2.1.2 Cores. Cores shall be in accordance with table IX as specified (see 6.2).

3.11.2.1.3 Fabrication. Wire ropes shall be fabricated as specified (see 3.4 and 6.2).

3.11.2.1.4 Lay. Wire ropes with fiber cores shall be supplied with right regular lay unless otherwise specified (see 3.4.4 and 6.2).

3.11.2.1.5 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be as specified in tables X through XIV.

3.11.2.2 Type I, general purpose, class 2, construction 1, 6 by 19 (2 operations) (see figure 6). Wire ropes shall have 6 strands of 19 wires each totaling 114 wires in the strands. This construction shall not be required in lang lay or in sizes larger than 3/8 inch.

3.11.2.2.1 Each strand shall have 1 wire center, 6 inner wires, and 12 outer wires. Wires in the inner layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in two operations.

3.11.2.3 Type I, general purpose, class 2, construction 2, 6 by 19 (Warrington) (see figure 7). Wire rope shall have 6 strands of 19 wires each, totaling 114 wires in the strands. This construction shall not be required in lang lay.

3.11.2.3.1 Each strand shall have 1 wire center, 6 inner wires, and 12 outer wires. Wires in the inner layer shall be 1 diameter. Wires in the outer layer shall be 2 diameters of wire laid alternately. Each strand shall be fabricated in one operation.

3.11.2.4 Type I, general purpose, class 2, construction 3, 6 by 19 (Seale) (see figure 8). Wire ropes shall have 6 strands of 19 wires each, totaling 114 wires in the strands.

3.11.2.4.1 Each strand shall have 1 wire center, 9 inner wires, and 9 outer wires. Wires in the inner layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in one operation.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:10Z
Check the source to verify that this is the current version before use.

3.11.2.5 Type I, general purpose, class 2, construction 4, 6 by 19 (Filler wire) (see figure 9). Wire ropes shall have 6 strands of not less than 21 wires and not more than 25 wires each, totaling not less than 126 nor more than 150 wires in the strands. This construction shall not be required in sizes smaller than 3/8 inch.

3.11.2.5.1 Each strand shall have 1 wire center, not less than 5 nor more than 6 inner wires and not less than 10 nor more than 12 outer wires. There shall be not less than 5 nor more than 6 wires (fillers) between the layers. Wires in the inner layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Filler wires shall be 1 diameter. Each strand shall be fabricated in one operation.

3.11.2.6 Type I, general purpose, class 2, construction 5, 6 by 19 (Warrington-Seale) (see figure 10). Wire ropes shall have 1 core and 6 strands of 26 wires each totaling 156 wires in the strands.

3.11.2.6.1 Each strand shall have 1 center wire, 5 inner wires, 10 intermediate wires, and 10 outer wires. Wires in the inner layer shall be 1 diameter. Wires in the intermediate layer shall be 2 diameters of wire laid alternately. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in one operation.

3.11.3 Type I, general purpose, class 3, 6 by 37.

3.11.3.1 Material. Material shall be of improved plow steel, extra improved plow steel, or corrosion-resistant steel as specified (see 3.1 and 6.2).

3.11.3.1.1 Finish. Wire rope of corrosion-resistant steel shall be of uncoated (bright) wires. Wire rope of improved plow steel or extra improved plow steel shall be of uncoated (bright) or zinc-coated (drawn galvanized) wire as specified (see 3.3.1.3, 3.3.5, and 6.2).

3.11.3.1.2 Cores. Cores shall be in accordance with table IX as specified (see 6.2).

3.11.3.1.3 Fabrication. Wire ropes shall be fabricated as specified (see 3.4 and 6.2).

3.11.3.1.4 Lay. Lay shall be as specified (see 3.4.4 and 6.2).

3.11.3.1.5 Dimensions, weight, and strength. Dimensions, weight, and strength shall be as specified in tables X through XIII and XV through XVIII.

3.11.3.2 Type I, general purpose, class 3, construction 1, 6 by 37 (3 operations) (see figure 11). Wire ropes shall have 1 core and 6 strands of not less than 34 nor more than 37 wires each totaling not less than 204 nor more than 222 wires in the strands. This construction shall not be required in lang lay or in sizes larger than 3/8 inch.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:10Z
Check the source to verify that this is the current version before use.

3.11.3.2.1 Each strand shall have 1 wire center, 6 inner wires, 12 intermediate wires, and not less than 15 nor more than 18 outer wires. Wires in the inner layer shall be 1 diameter. Wires in the intermediate layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in three operations.

3.11.3.3 Type I, general purpose, class 3, construction 2, 6 by 37 (2 operations) (see figure 12). Wire ropes shall have 1 core and 6 strands of not less than 33 nor more than 43 wires each totaling not less than 198 nor more than 258 wires in the strands. This construction shall not be required in lang lay.

3.11.3.3.1 Each strand shall have 1 center strand of 19 to 25 wires constructed in accordance with 3.11.2.3, 3.11.2.4, and 3.11.2.5. Over this center strand, the outer layer shall be not less than 14 nor more than 18 wires. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in two operations.

3.11.3.4 Type I, general purpose, class 3, construction 3, 6 by 37 (Seale) (2 operations) (see figure 13). Wire ropes shall have 1 core and 6 strands of not less than 27 nor more than 37 wires each totaling not less than 162 nor more than 222 wires in the strands. This construction is generally furnished only in regular lay. It shall not be required in sizes larger than 1 inch.

3.11.3.4.1 Each strand shall have 1 wire center, 6 inner wires, not less than 10 nor more than 15 intermediate wires, and not less than 10 nor more than 15 outer wires. Wires in the inner layer shall be 1 diameter. Wires in the intermediate layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in two operations.

3.11.3.5 Type I, general purpose, class 3, construction 4, 6 by 37 (Filler wire) (see figure 14). Wire ropes shall have 1 core and 6 strands of not less than 29 nor more than 37 wires each totaling not less than 174 nor more than 222 wires in the strands. This construction shall not be required in sizes smaller than 3/8 inch.

3.11.3.5.1 Each strand shall have 1 wire center, not less than 7 nor more than 9 inner wires, and not less than 14 nor more than 18 outer wires. There shall be not less than 7 nor more than 9 filler wires between the inner and outer layers. Wires in the inner layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Filler wires shall be 1 diameter. Each strand shall be fabricated in one operation.

3.11.3.6 Type I, general purpose, class 3, construction 5, 6 by 37 (Seale-Warrington) (see figure 15). Wire ropes shall have 1 core and 6 strands of not less than 29 nor more than 37 wires each totaling not less than 174 nor more than 222 wires in the strands. This construction shall not be required in lang lay or in sizes smaller than 3/8 inch.

3.11.3.6.1 Each strand shall have 1 center wire, not less than 7 nor more than 9 inner wires, not less than 7 nor more than 9 intermediate wires, and not less than 14 nor more than 18 outer wires. Wires in the inner layer shall be 1 diameter. Wires in the intermediate layer shall be 1 diameter. Wires in the outer layer shall be 2 diameters, laid alternately. Each strand shall be fabricated in one operation.

3.11.3.7 Type I, general purpose, class 3, construction 6, 6 by 37 (Warrington-Seale) (see figure 16). Wire ropes shall have 1 core and 6 strands of not less than 31 nor more than 46 wires each totaling not less than 186 nor more than 276 wires in the strands.

3.11.3.7.1 Each strand shall have 1 wire center, not less than 6 nor more than 9 inner wires, not less than 12 nor more than 18 intermediate wires, and not less than 12 nor more than 18 outer wires. Wires in the inner layer shall be 1 diameter. Wires in the intermediate layer shall be 2 diameters of wires laid alternately. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in one operation.

3.11.3.8 Type I, general purpose, class 3, construction 7, 6 by 37 (Seale-Filler wire) (see figure 17). Wire ropes shall have 1 core and 6 strands of not less than 36 wires nor more than 46 wires each totaling not less than 216 nor more than 276 wires in the strands. This construction shall not be required in sizes 3/8 inch and smaller.

3.11.3.8.1 Each strand shall have 1 wire center, not less than 7 nor more than 9 inner wires, not less than 7 nor more than 9 intermediate wires, not less than 14 nor more than 18 outer wires. There shall be not less than 7 nor more than 9 filler wires between the intermediate and outer layers. Wires in the inner layer shall be 1 diameter. Wires in the intermediate layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Filler wires shall be 1 diameter. Each strand shall be fabricated in one operation.

3.11.3.9 Type I, general purpose, class 3, construction 8, 6 by 37 (Filler wire-Seale) (see figure 18). Wire ropes shall have 1 core and 6 strands of not less than 31 nor more than 49 wires each, totaling not less than 186 nor more than 294 wires in the strands. This construction shall not be required in sizes smaller than 1/2 inch.

3.11.3.9.1 Each strand shall have 1 wire center, not less than 5 nor more than 8 inner wires, not less than 10 nor more than 16 intermediate wires, and not less than 10 nor more than 16 outer wires. There shall be not less than 5 nor more than 8 filler wires between the inner and intermediate layers. Wires in the inner layer shall be 1 diameter. Wires in the intermediate layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Filler wires shall be 1 diameter. Each strand shall be fabricated in one operation.

3.11.3.10 Type I, general purpose, class 3, construction 9, 6 by 37 (Seale-Warrington-Seale) (see figure 19). Wire ropes shall have 1 core and 6 strands of not less than 43 nor more than 49 wires each, totaling not less than 258 nor more than 294 wires in the strands. This construction shall not be required in sizes smaller than 2 inches.

3.11.3.10.1 Each strand shall have 1 wire center, not less than 7 nor more than 8 inner wires, not less than 7 nor more than 8 inside intermediate wires, not less than 14 nor more than 16 outside intermediate wires, and not less than 14 nor more than 16 outer wires. Wires in the inner layer shall be 1 diameter. Wires in the inside intermediate layer shall be 1 diameter. Wires in the outside intermediate layer shall be 2 diameters, laid alternately. Wires in the outside layer shall be 1 diameter. Each strand shall be fabricated in one operation.

3.11.4 Type I, general purpose, class 4, 8 by 19.

3.11.4.1 Material. Material shall be of improved plow steel as specified in 3.1.

3.11.4.1.1 Finish. Wire ropes shall be of uncoated (bright) or zinc-coated (galvanized) wires as specified (see 3.3.1.3, 3.3.5, and 6.2).

3.11.4.1.2 Cores. Cores shall be fiber cores in accordance with 3.2.1 or, when specified, (see 3.2.5 and 6.2).

3.11.4.1.3 Fabrication. Wire ropes shall be fabricated as specified (see 3.4 and 6.2).

3.11.4.1.4 Lay. Lay shall be right regular lay in accordance with 3.4.4.1.

3.11.4.1.5 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be as specified in table XIX.

3.11.4.2 Type I, general purpose, class 4, construction 1, 8 by 19 (2 operations) (see figure 20). Wire ropes shall have 1 core and 8 strands of 19 wires each, totaling 152 wires in the strands. This construction shall not be required in sizes larger than 1/4 inch.

3.11.4.2.1 Each strand shall be in accordance with 3.11.2.2.1.

3.11.4.3 Type I, general purpose, class 4, construction 2, 8 by 19 (Warrington)(see figure 21). Wire rope shall have 1 core and 8 strands of 19 wires each, totaling 152 wires in the strands. This construction shall not be required in sizes smaller than 1/4 inch.

3.11.4.3.1 Each strand shall be in accordance with 3.11.2.3.1.

3.11.4.4 Type I, general purpose, class 4, construction 3, 8 by 19 (Seale) (see figure 22). Wire ropes shall have 1 core and 8 strands of 19 wires each, totaling 152 wires in the strands.

3.11.4.4.1 Each strand shall be in accordance with 3.11.2.4.1.

3.11.4.5 Type I, general purpose, class 4, construction 4, 8 by 19 (Filler wire) (see figure 23). Wire ropes shall have 1 core and 8 strands of not less than 21 nor more than 25 wires, totaling not less than 168 nor more than 200 wires in the strands. This construction shall not be required in sizes smaller than 7/16 inch.

3.11.4.5.1 Each strand shall be in accordance with 3.11.2.5.1.

3.11.4.6 Type I, general purpose, class 4, construction 5, 8 by 19 (Warrington-Seale) (see figure 24). Wire ropes shall have 1 core and 8 strands of 26 wires each totaling 208 wires in the strands.

3.11.4.6.1 Each strand shall be in accordance with 3.11.2.6.1.

3.11.5 Type I, general purpose, class 5, 6 by 61 (see figure 25).

3.11.5.1 Material. Material shall be of improved plow or extra improved plow steel as specified (see 3.1 and 6.2).

3.11.5.1.1 Finish. Wire rope of improved plow steel or extra improved plow steel shall be of uncoated (bright) or zinc-coated (drawn galvanized) wire as specified (see 3.3.1.3, 3.3.5, and 6.2).

3.11.5.1.2 Cores. Wire ropes of improved plow steel shall have either fiber core, wire strand core, or IWRC as specified (see 3.2 and 6.2). Wire ropes of extra improved plow steel shall have an IWRC in accordance with 3.2.3.

3.11.5.1.3 Fabrication. Wire ropes shall be fabricated as specified (see 3.4 and 6.2).

3.11.5.1.4 Lay. Lay shall be as specified (see 3.4.4 and 6.2).

3.11.5.1.5 Dimensions, weight, and strength. Dimensions, weight, and strength shall be as specified in tables XX, XXI, and XXII.

3.11.5.2 Type I, general purpose, class 5, construction 1, 6 by 61 (3 operations). Wire ropes shall have 1 core and 6 strands of not less than 53 nor more than 68 wires each totaling not less than 318 nor more than 408 wires in the strands. This construction is not furnished in lang lay and it is not furnished preformed. This construction shall not be required in sizes smaller than 2 inches.

3.11.5.2.1 Each strand shall have 1 center strand of 19 to 26 wires constructed in accordance with 3.11.2.3.1, 3.11.2.4.1, 3.11.2.5.1, or 3.11.2.6.1. The second layer from the outside shall have not less than 14 nor more than 18 wires. The outer layer shall have not less than 20 nor more than 24 wires. Wires in the second layer from the outside shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in three operations.

3.11.5.3 Type I, general purpose, class 5, construction 2, 6 by 61 (2 operations). Wire ropes shall have 1 core and 6 strands of not less than 51 nor more than 74 wires each totaling not less than 306 nor more than 444 wires in the strands. This construction is not furnished in lang lay and it is not furnished preformed. This construction shall not be required in sizes smaller than 2 inches.

3.11.5.3.1 Each strand shall have 1 center strand of 19 to 26 wires constructed in accordance with 3.11.2.3.1, 3.11.2.4.1, 3.11.2.5.1, or 3.11.2.6.1. The second layer from the outside shall have not less than 16 nor more than 24 wires. The outer layer shall have not less than 16 nor more than 24 wires. Wires in the second layer from the outside shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in two operations.

3.11.5.4 Type I, general purpose, class 5, construction 3, 6 by 61 (2 operations). Wire ropes shall have 1 core and 6 strands of not less than 51 nor more than 73 wires each totaling not less than 306 nor more than 438 wires in the strands. This construction is not furnished in lang lay and it is not furnished preformed. This construction shall not be required in sizes smaller than 2 inches.

3.11.5.4.1 Each strand shall have 1 center strand of 31 to 49 wires constructed in accordance with 3.11.3.5.1, 3.11.3.6.1, 3.11.3.7.1, 3.11.3.8.1, or 3.11.3.9.1. The outside layer shall have not less than 16 nor more than 24 wires. Wires in the outside shall be 1 diameter. Each strand shall be fabricated in two operations.

3.11.5.5 Type I, general purpose, class 5, construction 4, 6 by 61 (Filler wire-Seale). Wire ropes shall have 1 core and 6 strands of not less than 55 nor more than 61 wires each totaling not less than 330 nor more than 366 wires in the strand. This construction shall not be required in sizes smaller than 2 inches.

3.11.5.5.1 Each strand shall have one wire center, either 8 or 9 inner wires, either 16 or 18 intermediate wires, and either 16 or 18 outer wires. There shall be a layer of either 8 or 9 filler wires between the inner and intermediate layers. Wires in the inner layer shall be 1 diameter. Wires in the intermediate layer shall be 1 diameter. Wires in the outside layer shall be 1 diameter. Filler wires shall be 1 diameter.

3.11.5.6 Type I, general purpose, class 5, construction 5, 6 by 61 (Seale-Warrington-Seale). Wire ropes shall have 1 core and 6 strands of 55 wires each, totaling 330 wires in the strands. This construction shall not be required in sizes smaller than 2 inches.

3.11.5.6.1 Each strand shall have 1 wire center, 9 inner wires, 9 inside intermediate wires, 18 outside intermediate wires, and 18 outer wires. Wires in the inner layer shall be 1 diameter. Wires in the inside intermediate layer shall be 1 diameter. Wires in the outside intermediate layer shall be 2 diameters laid alternately. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in one operation.

3.11.5.7 Type I, general purpose, class 5, construction 6, 6 by 61 (Seale-Filler wire-Seale). Wire ropes shall have 1 core and 6 strands of 57 or 64 wires each totaling 342 or 384 wires in the strands. This construction shall not be required in sizes smaller than 2 inches.

3.11.5.7.1 Each strand shall have 1 wire center, 8 or 9 inner wires, 8 or 9 inside intermediate wires, 16 or 18 outside intermediate wires, and 16 or 18 outer wires. There shall be either 8 or 9 filler wires between the inside and outside intermediate layers. Wires in the inner layer shall be 1 diameter. Wires in the inside intermediate layer shall be 1 diameter. Wires in the outside intermediate layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Filler wires shall be 1 diameter. Each strand shall be fabricated in one operation.

3.11.6 Type I, general purpose, class 6, 6 by 91 (see figure 26).

3.11.6.1 Material. Material shall be of improved plow steel or extra improved plow steel as specified (see 3.1 and 6.2).

3.11.6.1.1 Finish. Wire rope of improved plow steel or extra improved plow steel shall be of uncoated (bright) or zinc-coated (drawn galvanized) wire as specified (see 3.3.1.3, 3.3.5, and 6.2).

3.11.6.1.2 Cores. Wire ropes of improved plow steel shall have either fiber core, wire strand core, or IWRC as specified (see 3.2 and 6.2). Wire ropes of extra improved plow steel shall be IWRC in accordance with 3.2.3.

3.11.6.1.3 Fabrication. Wire ropes shall be fabricated as specified (see 3.4 and 6.2).

3.11.6.1.4 Lay. Unless otherwise specified (see 6.2), the lay shall be right regular lay in accordance with 3.4.4.1.

3.11.6.1.5 Dimensions, weight, and strength. Dimensions, weight, and strength shall be as specified in tables XXIII, XXIV, and XXV.

3.11.6.2 Type I, general purpose, class 6, construction 1, 6 by 91 (4 operations). Wire ropes shall have 1 core and 6 strands of not less than 79 nor more than 98 wires each totaling not less than 474 nor more than 588 wires in the strands. This construction is not furnished in lang lay and it is not furnished preformed. This construction shall not be required in sizes smaller than 2-1/2 inches.

3.11.6.2.1 Each strand shall have 1 center strand of 19 to 26 wires constructed in accordance with 3.11.2.3.1, 3.11.2.4.1, 3.11.2.5.1, or 3.11.2.6.1. The third layer from the outside shall have not less than 14 nor more than 18 wires. The second layer from the outside shall have not less than 20 nor more than 24 wires. The outer layer shall have not less than 26 nor more than 30 wires. Wires in the third layer from the outside shall be 1 diameter. Wires in the second layer from the outside shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in 4 operations.

3.11.6.3 Type I, general purpose, class 6, construction 2, 6 by 91 (3 operations). Wire ropes shall have 1 core and 6 strands of not less than 79 nor more than 110 wires each totaling not less than 474 nor more than 660 wires in the strands. This construction is not furnished in lang lay and it is not furnished preformed. This construction shall not be required in sizes smaller than 2-1/2 inches.

Check the source to verify that this is the current version before use.

3.11.6.3.1 Each strand shall have 1 center strand of 19 to 26 wires constructed in accordance with 3.11.2.3.1, 3.11.2.4.1, 3.11.2.5.1, or 3.11.2.6.1. The third layer from the outside shall have not less than 16 nor more than 24 wires. The second layer from the outside shall have not less than 22 nor more than 30 wires. The outer layer shall have not less than 22 nor more than 30 wires. Wires in the third layer from the outside shall be 1 diameter. Wires in the second layer from the outside shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in 3 operations.

3.11.6.4 Type I, general purpose, class 6, construction 3, 6 by 91 (3 operations). Wire ropes shall have 1 core and 6 strands of not less than 75 nor more than 103 wires each totaling not less than 450 nor more than 618 wires in the strands. This construction is not furnished in lang lay and it is not furnished preformed. This construction shall not be required in sizes smaller than 2-1/2 inches.

3.11.6.4.1 Each strand shall have 1 center strand of 29 to 49 wires constructed in accordance with 3.11.3.5.1, 3.11.3.6.1, 3.11.3.7.1, 3.11.3.8.1, or 3.11.3.9.1. The second layer from the outside shall have not less than 20 nor more than 24 wires. The outer layer shall have not less than 26 nor more than 30 wires. Wires in the second layer from the outside shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in 3 operations.

3.11.6.5 Type I, general purpose, class 6, construction 4, 6 by 91 (2 operations). Wire ropes shall have 1 core and 6 strands of not less than 75 nor more than 109 wires each totaling not less than 450 nor more than 654 wires in the strands. This construction is not furnished in lang lay and it is not furnished preformed. This construction shall not be required in sizes smaller than 2-1/2 inches.

3.11.6.5.1 Each strand shall have 1 center strand of 31 to 49 wires constructed in accordance with 3.11.3.5.1, 3.11.3.6.1, 3.11.3.7.1, 3.11.3.8.1, or 3.11.3.9.1. The second layer from the outside shall have not less than 22 nor more than 30 wires. The outer layer shall have not less than 22 nor more than 30 wires. Wires in the second layer from the outside shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in 2 operations.

3.12 Type II, elevator.

3.12.1 Material. Material shall be of iron or traction steel as specified (see 3.1 and 6.2). When specified (see 6.2), elevator wire ropes of 11/16, 13/16, and 15/16 inch diameters may be of high-rise special steel of greater strengths.

3.12.1.1 Finish. Elevator wire ropes shall be of uncoated (bright) wires in accordance with 3.3.5.1.

3.12.1.2 Cores. Cores shall be fiber cores in accordance with 3.2.1 or 3.2.5.

Check the source to verify that this is the current version before use.

3.12.1.3 Fabrication. Steel wire ropes shall be fabricated as specified (see 3.4 and 6.2). Iron wire ropes shall be nonpreformed in accordance with 3.4.

3.12.1.4 Lay. Lay shall be right regular lay in accordance with 3.4.4.1.

3.12.1.5 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be as specified in tables XXVI, XXVII, and XXVIII.

3.12.2 Type II, elevator, class 1, 6 by 19.

3.12.2.1 Type II, elevator, class 1, construction 1, 6 by 19 (Warrington) (see figure 7). Wire ropes shall have 1 core and 6 strands of 19 wires each, totaling 114 wires in the strands. This construction shall not be required in sizes larger than 5/16 inch.

3.12.2.1.1 Strands shall be in accordance with 3.11.2.3.1.

3.12.2.2 Type II, elevator, class 1, construction 2, 6 by 19 (Filler wire) (see figure 9). Wire ropes shall have 1 core and 6 strands of not less than 21 and not more than 25 wires each, totaling not less than 126 nor more than 150 wires in the strands. This construction shall not be required in sizes smaller than 3/8 inch.

3.12.2.2.1 Strands shall be in accordance with 3.11.2.5.1.

3.12.2.3 Type II, elevator, class 1, construction 3, 6 by 19 (Warrington-Seale) (see figure 10). Wire ropes shall have 1 core and 6 strands of 26 wires each, totaling 156 wires in the strands. This construction shall not be required in sizes smaller than 3/8 inch.

3.12.2.3.1 Each strand shall be in accordance with 3.11.2.6.1.

3.12.3 Type II, elevator, class 2, 8 by 19.

3.12.3.1 Type II, elevator, class 2, construction 1, 8 by 19 (2 operations) (see figure 20). Wire ropes shall have 1 core and 8 strands of 19 wires each, totaling 152 wires in the strands. This construction shall not be required in sizes larger than 1/4 inch.

3.12.3.1.1 Strands shall be in accordance with 3.11.2.2.1.

3.12.3.2 Type II, elevator, class 2, construction 2, 8 by 19 (Warrington) (see figure 21). Wire rope shall have 1 core and 8 strands of 19 wires each, totaling 152 wires in the strand. This construction shall be required only in 1/4 inch through 7/16 inch sizes.

3.12.3.2.1 Each strand shall be in accordance with 3.11.2.3.1.

3.12.3.3 Type II, elevator, class 2, construction 3, 8 by 19 (Seale) (see figure 22). Wire ropes shall have 1 core and 8 strands of 19 wires each, totaling 152 wires in the strands.

Check the source to verify that this is the current version before use.

3.12.3.3.1 Each strand shall be in accordance with 3.11.2.4.1.

3.12.3.4 Type II, elevator, class 2, construction 4, 8 by 19 (Filler wire) (see figure 23). Wire ropes shall have 1 core and 8 strands of not less than 21 nor more than 25 wires each, totaling not less than 168 nor more than 200 wires in the strands. This construction shall not be required in sizes smaller than 7/16 inch.

3.12.3.4.1 Strands shall be in accordance with 3.11.2.5.1.

3.12.3.5 Type II, elevator, class 2, construction 5, 8 by 19 (Warrington-Seale) (see figure 24). Wire ropes shall have 1 core and 8 strands of 26 wires each, totaling 208 wires in the strands. This construction shall not be required in sizes smaller than 3/8 inch.

3.12.3.5.1 Each strand shall be in accordance with 3.11.2.6.1.

3.13 Type III, marine (cables).

3.13.1 Type III, marine (cables), class 1, 6 by 6, (deck lashing ropes) (see figure 27). Deck lashing ropes shall have 1 core and 6 strands of 1 fiber center and 6 wires each totaling 36 wires in the strands.

3.13.1.1 Each strand shall have 1 fiber center and 6 outer wires. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in one operation.

3.13.1.2 Material. Material shall be of improved plow steel as specified in 3.1.

3.13.1.3 Finish. Wire ropes shall be of uncoated or coated (galvanized) wires as specified (see 3.3.5 and 6.2).

3.13.1.4 Centers and cores. Strand centers and wire rope cores shall be of fiber in accordance with 3.2.1 or 3.2.5.

3.13.1.5 Fabrication. Wire ropes shall be preformed in accordance with 3.4.

3.13.1.6 Lay. Lay shall be right regular lay in accordance with 3.4.4.1.

3.13.1.7 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be as specified in table XXIX.

3.13.2 Type III, marine (cables), class 2, 6 by 12 (running ropes) (see figure 28). Running rope shall have 1 core and 6 strands of 1 fiber center and 12 wires each totaling 72 wires in the strands.

3.13.2.1 Each strand shall have 1 fiber center and 12 outer wires. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in one operation.

3.13.2.2 Material. Material shall be improved plow steel or phosphor bronze as specified (see 3.1 and 6.2).

3.13.2.3 Finish. Wire ropes of steel shall be of zinc coated (galvanized) wires in accordance with 3.3.5.2.

3.13.2.4 Centers and cores. Wire ropes shall have strand centers and rope cores of fiber in accordance with 3.2.1 or 3.2.5.

3.13.2.5 Fabrication. Wire ropes shall be fabricated as specified (see 3.4 and 6.2).

3.13.2.6 Lay. Lay shall be right regular lay in accordance with 3.4.4.1.

3.13.2.7 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be as specified in tables XXX and XXXI.

3.13.3 Type III, marine (cables), class 3, 6 by 24 mooring lines.

3.13.3.1 Material. Material shall be of improved plow steel as specified in 3.1.

3.13.3.1.1 Finish. Wire ropes shall be of zinc coated (galvanized) wires in accordance with 3.3.5.2.

3.13.3.1.2 Centers and cores. Wire ropes shall have strand centers and rope cores of fiber as specified in 3.2.1 or 3.2.5.

3.13.3.1.3 Fabrication. Wire ropes shall be fabricated as specified (see 3.4 and 6.2).

3.13.3.1.4 Lay. Lay shall be of right regular lay in accordance with 3.4.4.1.

3.13.3.1.5 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be as specified in table XXXII.

3.13.3.2 Type III, marine (cables), class 3, 6 by 24 (mooring lines), construction 1, (2 operations) (see figure 29). Wire rope shall have 1 core and 6 strands of 1 fiber center and 24 wires each totaling 144 wires in the strands.

3.13.3.2.1 Each strand shall have 1 fiber center, 9 wires in the inner layer and 15 wires in the outer layer. Wires in the inner layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in 2 operations.

3.13.3.3 Type III, marine (cables), class 3, 6 by 24 mooring lines, construction 2, (Warrington) (see figure 30). Wire rope shall have 1 core and 6 strands of 1 fiber center and 24 wires each totaling 144 wires in the strands.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:10Z
Check the source to verify that this is the current version before use.

3.13.3.3.1 Each strand shall have 1 fiber center, 8 wires in the inner layer and 16 wires in the outer layer. Wires in the inner layer shall be 1 diameter. Wires in the outer layer shall be 2 diameters laid alternately. Each strand shall be fabricated in one operation.

3.13.3.4 Type III, marine (cables), class 3, 6 by 24 (mooring lines), construction 3, (Seale) (see figure 31). Wire rope shall have 1 core and 6 strands of 1 fiber center and 24 wires totaling 144 wires in the strands.

3.13.3.4.1 Each strand shall have 1 fiber center, 12 wires in the inner layer and 12 wires in the outer layer. Wires in the inner layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in one operation.

3.13.4 Type III, marine (cables), class 4, 6 by 3 by 7 spring lay (see figure 32). Wire rope shall have 1 core and 6 strands of 1 fiber center and 6 substrands (3 fiber and 3 steel) each totaling 126 wires in the steel strands.

3.13.4.1 Each steel substrand shall be in accordance with 3.11.1. Each strand shall have 1 fiber center, 3 fiber substrands, and 3 steel substrands of 7 wires each totaling 21 wires laid alternately.

3.13.4.2 Material. Material shall be of improved plow steel as specified in 3.1.

3.13.4.2.1 Finish. Wire ropes shall be of zinc coated (galvanized) wire in accordance with 3.3.5.2.

3.13.4.2.2 Centers and cores.

3.13.4.2.2.1 Centers and cores. Centers and cores shall be fiber in accordance with 3.2.1. The alternate (main) fiber strands showing on the surface of the finished spring lay rope shall be made of either polypropylene fiber, or a good quality hard fiber. A mixture of two or more kinds of hard fiber may be used.

3.13.4.2.2.2 Preservation and lubrication. Fiber parts shall be treated with a lubricating compound blended to give proper lubricity and water repellancy. The materials used shall not accelerate deterioration of the fiber parts during storage or weathering of the spring lay rope, nor adversely affect its handling qualities or durability. This requirement is not applicable to polypropylene parts (see MIL-P-24216).

3.13.4.2.3 Fabrication. Wire rope shall be preformed in accordance with 3.4. This rope shall not be required to meet the requirement of 4.4.5.2.

3.13.4.2.4 Lay. Lay shall be of right regular lay in accordance with 3.4.4.1.

3.13.4.2.5 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be as specified in table XXXIII.

Check the source to verify that this is the current version before use.

3.13.5 Type III, marine (cables), class 5, 6 by 3 by 19 spring lay.

3.13.5.1 Material. Material shall be of improved plow steel as specified in 3.1.

3.13.5.1.1 Finish. Wire rope shall be coated as specified (see 3.3.5 and 6.2).

3.13.5.1.2 Centers and cores. Centers and cores shall be as specified in 3.13.4.2.2.

3.13.5.1.3 Fabrication. Wire rope shall be preformed in accordance with 3.4. This rope shall not be required to meet the requirement of 4.4.5.2.

3.13.5.1.4 Lay. Lay shall be of right regular lay in accordance with 3.4.4.1.

3.13.5.1.5 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be as specified in table XXXIII.

3.13.5.2 Type III, marine (cables), class 5, 6 by 3 by 19 spring lay, construction 1, (2 operations) (see figure 33). Wire rope shall have 1 core and 6 strands of 1 fiber center and 6 substrands (3 fiber and 3 steel), each totaling 342 wires in the steel strands.

3.13.5.2.1 Each steel substrand shall be in accordance with 3.13.4.2. Each strand shall have 1 fiber center, 3 fiber substrands and 3 steel substrands of 19 wires each, totaling 57 wires laid alternately.

3.13.5.3 Type III, marine (cables), class 5, 6 by 3 by 19 spring lay, construction 2, (Warrington) (see figure 34). Wire rope shall have 1 core and 6 strands of 1 fiber center and 6 substrands (3 fiber and 3 steel) each, totaling 342 wires in the steel strands.

3.13.5.3.1 Each steel substrand shall be in accordance with 3.11.2.3.1. Each strand shall have 1 fiber center and 3 fiber substrands and 3 steel substrands of 19 wires each, totaling 57 wires laid alternately.

3.13.5.4 Type III, marine (cables), class 5, 6 by 3 by 19 spring lay, construction 3, (Seale) (see figure 35). Wire rope shall have 1 core and 6 strands of 1 fiber center and 6 substrands (3 fiber and 3 steel) each, totaling 342 wires in the steel strands.

3.13.5.4.1 Each steel substrand shall be in accordance with 3.11.2.4.1. Each strand shall have 1 fiber center, 3 fiber substrands and 3 steel substrands of 19 wires each, totaling 57 wires laid alternately.

3.13.5.5 Type III, marine (cables), class 6, 6 by 42 tiller or hand control ropes (see figure 36). Wire rope shall have 1 core and 6 strands of 1 fiber center and 6 substrands each, totaling 252 wires in the strands.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:10Z
Check the source to verify that this is the current version before use.

3.13.5.5.1 Each substrand shall be in accordance with 3.11.1. Each strand shall have 1 fiber center and 6 substrands of 7 wires each, totaling 42 wires.

3.13.5.5.2 Material. Material shall be of improved plow steel or phosphor bronze as specified (see 3.1 and 6.2).

3.13.5.5.2.1 Finish. Wire ropes of improved plow steel shall be either zinc coated or uncoated (bright) wires, as specified (see 6.2), in accordance with 3.3.5.

3.13.5.5.2.2 Centers and cores. Centers and cores shall be fiber in accordance with 3.2.1 or 3.2.5.

3.13.5.5.2.3 Fabrication. Wire ropes shall be nonpreformed in accordance with 3.4.3.2.

3.13.5.5.2.4 Lay. Lay shall be of right regular lay in accordance with 3.4.4.1.

3.13.5.5.2.5 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be in accordance with tables XXXIV and XXXV.

3.14 Type IV, miscellaneous.

3.14.1 Type IV, miscellaneous class 1, 5 by 19 marline-clad.

3.14.1.1 Material. Wire ropes shall be of improved plow steel as specified in 3.1.

3.14.1.2 Finish. Wire ropes shall be of uncoated (bright) wires in accordance with 3.3.5.1.

3.14.1.3 Cores. Wire ropes shall have fiber cores in accordance with 3.2.1 or 3.2.5.

3.14.1.4 Fabrication. Wire ropes shall be preformed in accordance with 3.4.3.1.

3.14.1.5 Lay. Lay shall be of right regular lay in accordance with 3.4.4.1.

3.14.1.6 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be in accordance with table XXXVI.

3.14.2 Type IV, miscellaneous, class 1, 5 by 19 marline-clad, construction 1 (2 operations) (see figure 37). Wire rope shall have 1 core and 5 strands of 19 wires each, totaling 95 wires in the strands.

3.14.2.1 Each strand shall be in accordance with 3.11.2.2.1. Each strand shall be served with marline wound tightly on the strand so that it is firm, durable, uniformly smooth, and free from imperfections.

Check the source to verify that this is the current version before use.

3.14.2.2 Type IV, miscellaneous, class 1, 5 by 19 marline-clad, construction 2, (Warrington) (see figure 38). Wire rope shall have 1 core and 5 strands of 19 wires each, totaling 95 wires in the strands.

3.14.2.2.1 Each strand shall be in accordance with 3.11.2.3.1. Each strand shall be served with marline would tightly on the strand so that it is firm, durable, uniformly smooth, and free from imperfections.

3.14.2.3 Type IV, miscellaneous, class 1, 5 by 19 marline-clad, construction 3, (Filler wire) (see figure 39). Wire rope shall have 1 core and 5 strands of not less than 21 nor more than 25 wires each, totaling not less than 105 nor more than 125 wires in the strands.

3.14.2.3.1 Each strand shall be in accordance with 3.11.2.5.1. Each strand shall be served with marline wound tightly on the strand so that it is firm, durable, uniformly smooth, and free from imperfections.

3.14.3 Type IV, miscellaneous, class 2, 18 by 7 rotation resistant (see figure 40). Wire rope shall have 1 core, 6 strands of 7 wires each, totaling 42 wires in the inner layer and 12 strands of 7 wires each, totaling 84 wires in the outer layer. The inner rope layer shall be lang lay, left lay, whereas the outer rope layer shall be regular lay, right lay. The wire rope shall be closed in 2 operations. Total number of wires in the rope shall be 126.

3.14.3.1 Each strand shall be in accordance with 3.11.1, except for material and lay.

3.14.3.1.1 Material. Wire ropes shall be of improved plow steel or extra improved plow steel as specified in 3.1.

3.14.3.1.2 Finish. Wire ropes shall be uncoated (bright) or zinc coated (drawn galvanized) as specified (see 3.3.5 and 6.2).

3.14.3.1.3 Cores. Unless otherwise specified (see 6.2), cores shall be either fiber or wire strand at option of the contractor (see 3.2.1, 3.2.2 and 6.2).

3.14.3.1.4 Fabrication. Wire rope shall be preformed in accordance with 3.4.3.1.

3.14.3.1.5 Lay.

3.14.3.1.5.1 Inner layer. The 6 inner strands in the ropes shall be of a left lang lay in accordance with 3.4.4.4 laid around a fiber core or a wire strand core.

3.14.3.1.5.2 Outer layer. The 12 strands in the outer layer shall be laid around the first layer in a right regular lay in accordance with 3.4.4.1.

3.14.3.1.6 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be in accordance with tables XXXVII and XXXVIII.

Check the source to verify that this is the current version before use.

3.14.4 Type IV, miscellaneous, class 3, flattened strand.

3.14.4.1 Material. Material shall be of the improved plow steel or extra improved plow steel as specified in 3.1.

3.14.4.1.1 Finish. Wire ropes shall be of uncoated (bright) wires in accordance with 3.3.5.1.

3.14.4.1.2 Cores. Wire ropes of improved plow steel shall have fiber, wire strand, or independent wire-rope cores as specified (see 3.2 and 6.2). Wire ropes of extra improved plow steel shall have a wire strand or IWRC as specified (see 3.2.2, 3.2.3 and 6.2).

3.14.4.1.3 Fabrication. Wire ropes shall be fabricated as specified (see 3.4 and 6.2).

3.14.4.1.4 Lay. Lay shall be right lang lay in accordance with 3.4.4.3.

3.14.4.1.5 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be in accordance with tables XXXIX, XL, and XLI.

3.14.4.2 Type IV, miscellaneous, class 3, flattened strand, construction 1, 6 by 25, style B (see figure 41). Wire rope shall have 1 core and 6 strands of 1 triangular wire center and 24 wires each, totaling 144 wires and 6 triangular wire centers in the strands.

3.14.4.2.1 Each strand shall have 1 triangular-wire center, 12 round wires in the inner layer and 12 round wires in the outer layer. Wires in the inner layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in two operations.

3.14.4.3 Type IV, miscellaneous, class 3, flattened strand, construction 2, 6 by 30, style G (see figure 42). Wire rope shall have 1 core and 6 strands of 1 triangular shaped center of 6 wires, and 24 wires each, totaling 180 wires in the strands.

3.14.4.3.1 Each strand shall have 1 triangular shaped center, 12 wires in the inner layer and 12 wires in the outer layer. Each triangular-shaped center shall have 6 round wires. Each pair of the wires shall be twisted together, then the 3 pairs twisted together so that the cross-section of the center is triangular. There may be filler wires in the center. Wires in the inner layer shall be 1 diameter. Wires in the center layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in either two or three operations.

3.14.4.4 Type IV, miscellaneous, class 3, flattened strand, construction 3, 6 by 27 style H (see figure 43). Wire rope shall have 1 core and 6 strands of 27 wires each, totaling 162 wires in the strands.

Source: https://assist.dla.mil/ -- Downloaded: 2026-10-26T12:10Z
Check the source to verify that this is the current version before use.

3.14.4.4.1 Each strand shall have 1 triangular-shaped center consisting of 3 round wires, 12 round wires in the inner layer and 12 round wires in the outer layer. Wires in the inner layer shall be 1 diameter. Wires in the center layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in 2 or 3 operations.

3.14.4.5 Type IV miscellaneous, class 3, flattened strand, construction 4, 6 by 31, style V (see figure 44). Wire rope shall have 1 core and 6 strands of triangular-shaped brangled center strand of 6 or 7 wires and 24 wires each, totaling either 180 or 186 wires in the strands.

3.14.4.5.1 Each strand shall have 1 triangular-shaped brangled center strand, 12 wires in the inner layer and 12 wires in the outer layer. Each triangular-shaped brangled strand shall have either a fiber center or a round wire center with 6 round wires laid around it and brangled so that the cross-section of the center strand is triangular. Wires in the center layer shall be 1 diameter. Wires in the inner layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. Each strand shall be fabricated in either 2 or 3 operations.

3.14.5 Type IV, miscellaneous, class 4, 8 by 19 rotation resistant.

3.14.5.1 Material. Wire rope shall be of improved plow steel or extra improved plow steel as specified in 3.1.

3.14.5.2 Finish. Wire ropes shall be of uncoated (bright) or zinc coated (galvanized) wires in accordance with 3.3.5.

3.14.5.3 Core. Wire rope shall have an independent wire rope core in accordance with 3.2.3 and it shall be left lang lay in accordance with 3.4.4.4.

3.14.5.4 Fabrication. Wire rope shall be preformed in accordance with 3.4.3.1.

3.14.5.5 Lay. Wire rope lay shall be right regular lay in accordance with 3.4.4.1.

3.14.5.6 Dimensions, weight, and strength. Dimensions, weight, and strength shall be in accordance with tables XLII and XLIII.

3.14.5.7 Type IV, miscellaneous, class 4, construction 1, 8 by 19 (Seale) (see figure 45). Wire ropes shall have 1 core and 8 strands of 19 wires each, totaling 152 wires in the strands.

3.14.5.7.1 Each strand shall be in accordance with 3.11.2.4.1.

3.14.5.8 Type IV, miscellaneous, class 4, construction 2, 8 by 19 (Filler wire) (see figure 46). Wire ropes shall have 1 core and 8 strands of not less than 21 wires and not more than 25 wires each, totaling not less than 168 nor more than 200 wires in the strands.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:10Z
Check the source to verify that this is the current version before use.

3.14.5.8.1 Each strand shall be in accordance with 3.11.2.5.1.

3.14.5.9 Type IV, miscellaneous, class 4, construction 3, 8 by 19 (Warrington-Seale) (see figure 47). Wire ropes shall have 1 core and 8 strands of 26 wires each, totaling 208 wires in the strands.

3.14.5.9.1 Each strand shall be in accordance with 3.11.2.6.1.

3.15 Type V, auxiliary wire strands.

3.15.1 Type V, auxiliary wire strands, class 1, 1 by 7 seizing strand (see figure 48). The strand shall have 1 wire center and 6 outer wires. Wires in the outer layer shall be 1 diameter. The strand shall be fabricated in 1 operation and shall have 7 wires.

3.15.1.1 Material. Material shall be iron, annealed steel, or corrosion-resistant steel, as specified (see 3.1 and 6.2).

3.15.1.2 Finish. Wires shall be zinc coated in accordance with 3.3.5.2, except corrosion-resistant steel which shall be uncoated.

3.15.1.3 Fabrication. Wire strand shall be fabricated, as specified (see 3.4 and 6.2).

3.15.1.4 Lay. Strands shall be left lay in accordance with 3.4.4.

3.15.1.5 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be in accordance with table XLIV.

3.15.2 Type V, auxiliary wire strands, class 2, 1 by 19 seizing strand (2 operations) (see figure 49). The strand shall have 1 wire center, 6 wires in the inner layer and 12 wires in the outer layer. Wires in the inner layer shall be 1 diameter. Wires in the outer layer shall be 1 diameter. The strand shall be fabricated in 2 operations and shall have 19 wires.

3.15.2.1 Material. Material shall be of iron or annealed steel as specified (see 3.1 and 6.2).

3.15.2.2 Finish. Wires shall be zinc coated in accordance with 3.3.5.

3.15.2.3 Fabrication. Wire strand shall be fabricated as specified (see 3.4 and 6.2).

3.15.2.4 Lay. Strands shall be left lay in accordance with 3.4.4.

3.15.2.5 Dimensions, weight, and strength. Dimensions, weight, and strength requirements shall be in accordance with table XLV.

3.16 Type VI, small cords.

3.16.1 Material. Material shall be high quality carbon steel or corrosion-resistant steel suitable for the purpose and as specified (see 3.1 and 6.2).

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:10Z
Check the source to verify that this is the current version before use.

3.16.2 Finish. Wire rope of corrosion-resistant steel shall be of uncoated (bright) wire. Wire rope of carbon steel shall be of zinc-coated (drawn galvanized) wires (see 3.3.1.3 and 3.3.5).

3.16.3 Cores. Cores for class 2 and class 3 shall be wire strand (see 3.2.2). Class 1 shall have no core.

3.16.4 Fabrication. Wire rope shall be preformed and fabricated in accordance with 3.4. The diameter at the cut end shall not increase more than shown in table XLVI.

3.16.5 Lay. The lay shall be right regular lay in accordance with 3.4.4.1.

3.16.6 Dimensions, weight, and strength. Dimensions, weight, and strength shall be as specified in table XLVI.

3.16.7 Type VI, small cords, class 1, 3 by 7 (see figure 50). Wire rope shall have 3 strands of 7 wires each, totaling 21 wires, laid together without a core. This class shall be required only in sizes 1/32 and 3/64.

3.16.7.1 Each strand shall be in accordance with 3.11.1.1.

3.16.8 Type VI, small cords, class 2, 7 by 7 (see figure 51). Wire rope shall have 6 strands of 7 wires each, totaling 42 wires, laid around a wire strand core, also of 7 wires. This class shall be required only in sizes 3/64, 1/16, and 3/32.

3.16.8.1 Each strand, including the wire strand core, shall be in accordance with 3.11.1.1.

3.16.9 Type VI, small cord, class 3, 7 by 19 (2 operations) (see figure 52). Wire rope shall have 6 strands of 19 wires each, totaling 114 wires, laid around a wire strand core, also of 19 wires. This class shall be required only in sizes 1/16 through 3/8.

3.16.9.1 Each strand, including the wire strand core, shall be in accordance with 3.11.2.2.1.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements as specified herein. Except as otherwise specified in the contract or order, the contractor may use his own or any other facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the Government. The Government reserves the right to perform any of the inspections set forth in the specification where such inspections are deemed necessary to assure that supplies and services conform to prescribed requirements.

Check the source to verify that this is the current version before use.

4.2 Sampling.

4.2.1 Lot. A lot shall consist of all the wire rope or strand of one type, class, construction, size, and material presented for delivery at one time on the same contract or order.

4.2.1.1 When wire rope or strand can be identified by its manufacturing reel, one sample 12-feet long shall be taken from one shipping reel in the lot cut from the same manufacturing reel.

4.2.1.2 When wire rope or strand cannot be identified by its manufacturing reel, one sample 12-feet long shall be cut from each reel or coil submitted for inspection.

4.2.1.3 The 12-foot samples shall be seized, and cut into two pieces: a 3-foot length and a 9-foot length. Hereinafter the 3-foot length shall be identified as the short sample and the 9-foot length as the long sample.

4.2.1.4 Sampling for zinc coating. A minimum of four specimens of a convenient length, but not less than 12 inches each, cut from each size wire used in the rope, shall be randomly selected from the short samples.

4.3 Visual and dimensional examination. Each reel (or coil) in the lot shall be visually examined for workmanship, measured for dimensional requirements, and weighed.

4.3.1 Examination of diameter. The examination of the wire rope or strand diameter shall be made at the free end of the rope or strand in the shipping reel. Beginning not less than 5 feet from the end of the rope or strand, the diameter shall be measured at three places not less than 5 feet apart with a slide caliper as shown on figure 53. The average of the measured diameters shall be the diameter of the rope or strand inspection.

4.3.2 Examination of pitch. The examination of pitch, or of the lay length, shall be made at the free end of the wire rope or strand on the shipping reel. Beginning not less than 10 feet from the end of the rope, the length of five or more pitches shall be measured. The distance measured on a straight length of rope shall be divided by the number of pitches, in order to arrive at the pitch size of the length of a single lay.

4.4 Test procedures.

4.4.1 Tensile strength.

4.4.1.1 Tensile strength test of finished wire ropes and strands. The strength of wire ropes or strands shall be determined from the long samples. The acceptance breaking strength shall be as shown in the applicable tables herein. The free length of wire rope or strand shall be as shown in table XLVII. The rope ends shall be terminated in zinc poured sockets or other approved attachments. The loading conditions shall conform to the requirements of method 211 of FED-STD-151. A failure less than the acceptance breaking strength that occurs within three times the rope or strand diameter of the end attachment shall be considered "no test" and further testing shall proceed as though the test never occurred.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:10Z
Check the source to verify that this is the current version before use.

4.4.1.2 Tensile test of main wires. Unless otherwise specified (see 6.2), the test specified in 4.4.1.2.1 is not required.

4.4.1.2.1 From each short sample, not less than one specimen of each diameter of wire from each wire strand and not less than six specimens from each sample shall be selected and the tensile strength determined in accordance with ASTM E 8. The free length of wires shall be not less than 10 inches. The speed of the movable head of the testing machine under no load shall be not more than 1 inch per minute. The tensile strength of the main wires shall conform to the tensile strength requirements shown in table I.

4.4.2 Torsion test. When specified (see 6.2), the tests specified in 4.4.2.1 and 4.4.2.2 shall be required.

4.4.2.1 From each short sample (see 4.4.1.2.1), not less than one specimen of each size of main wires from each strand shall be taken. The total number of specimens shall be not more than 25 percent of the total number of main wires. The distance between the jaws of the testing machine shall be 8 $\pm$ 1/16 inch. One clamp in the testing machine shall be movable parallel to the axis of the tested wire and an axial tensile force in accordance with table XLVIII shall be applied to keep the tested wire straight during the test. The tested wire shall be twisted by rotating one or both of the clamps at a uniform rate of not more than 60 revolutions per minute. The wires shall not break when one end is held and the other rotated the number of revolutions (360 degrees) as shown in table III.

4.4.2.2 Alternative test procedure. Because the number of revolutions in the torsional test is proportional to the free length, the inspector may allow a free length before the test of 4 $\pm$ 1/16 inch for wires up to 0.040 inch in diameter or of 6 $\pm$ 1/16 inch for wires not more than 0.060 inch in diameter. Wire specimens with a free length of 4 inches shall not break when twisted one-half the number of revolutions shown in table III. The wire specimens with a free length of 6 inches shall not break when twisted three-fourths the number of revolutions shown in table III. Testing shall be done in the same manner as described in 4.4.2.1.

4.4.3 Wrapping test of main wires. From each short sample, not less than one specimen of each size of main wires from each wire strand shall be taken. The test specimen may be of any convenient length and shall be as unwound from a strand. One end of the specimen shall be secured on the mandrel in any convenient manner. The diameters of the mandrels and the number of wraps shall be as specified in 3.3.3.1 and 3.3.3.2 for the material and finish of the wires under the test. The wire shall not break or fracture. Occasional breakages at the place where the wire is secured on the mandrel shall be disregarded and an additional specimen substituted for the test.

4.4.4 Zinc-coating test.

4.4.4.1 Weight of coating test. The zinc coating shall be tested for weight by the Hydrochloric (Muriatic) Acid-Antimony Chloride Method, also called the stripping method.

Source: https://assist.dla.mil -- Downloaded: 202640-26T12:10Z
Check the source to verify that this is the current version before use.

4.4.4.2 The specimens shall be cleaned with an organic solvent, rinsed in water and dried. The surface shall be considered to be sufficently clean when the water rinse shows freedom from "water breaks", that is, when water wets the entire surface.

4.4.4.3 Preparation of the stripping solution. Twenty grams (g) of antimony trioxide (Sb_2O_3) or 32 g of antimony trichloride ($SbCl_3$) shall be dissolved in 1,000 milliliters (mL) of concentrated hydrochloric acid (HCl) having a specific gravity of approximately 1.19. To prepare the zinc stripping solution, five mL of the received antimony chloride solution shall be added to each 1,000 mL of concentrated hydrochloric acid (HCl) having a specific gravity of approximately 1.19.

4.4.4.4 Procedure. The specimen cleaned in accordance with 4.4.4.2 shall be weighed to the nearest 0.01 g.

(a) The zinc coating shall be stripped from the weighted specimen by immersing it in the stripping solution until the evolution of hydrogen ceases, or until only few bubbles are evolved. If the vessel used for the stripping bath is of small size, the specimen shall be loosely coiled to facilitate complete immersion. The temperature of the stripping solution shall at no time exceed 100°F. The same solution may be repeatedly used without further additions of antimony chloride solution, until the time for stripping becomes inconveniently long.
(b) After stripping, the specimen shall be washed and scrubbed under running water and dried.
(c) The weight of the stripped specimen shall be determined to the nearest 0.01 g.
(d) The diameter of the stripped specimen, in inches, shall be determined by taking the mean of two measurements at right angles to each other. The measurements shall be made to the nearest 0.001 inch.
(e) The weight of zinc coating shall be calculated as follows:

$$A = \frac{W_1 - W_2}{W_2} \times d \times 163$$

Where:

A = Weight of zinc coating in ounces per square foot of stripped wire surface.
W_1 = Original weight of specimen.
W_2 = Stripped weight of specimen.
d = Diameter, in inches, of stripped wire.
163 = Constant.

Check the source to verify that this is the current version before use.

4.4.5 Fabrication tests (in strands).

4.4.5.1 Determination of the number of stranding operations. The number of stranding operations in wire strands shall be determined from the short sample. One of the outside wires in the strand shall be unlaid for a distance of 1 foot, holding the remaining outside wires in their original position. If the unlaid wire was in contact with the same wires in the inside layer, then the two layers were fabricated in one operation. The same tests may be applied to the intermediate layers of the strand after removing all outer layer wires.

4.4.5.2 Preformed wire rope. If the seizing at one end of the wire is removed, the difference between the nominal diameter of the wire rope and the nominal diameter before seizing is removed shall be not more than the values given in table XLIX, or for type VI, small cord, wire rope, in table XLVI.

4.5 Rejection and retests.

4.5.1 Rejection. If any of the test specimens fail to pass any specified tests, all reels or coils from the same manufacturing reel or coil in the lot shall be rejected. If the test specimens were taken from each individual reel or coil the particular reel or coil, the specimen of which failed in the tests, shall be rejected.

4.5.2 Retest. The rejected material at the request from the manufacturer may be retested in accordance with FED-STD-151. Only one retest shall be permitted for each lot.

4.6 Inspection of packaging. Sample packages and packs, and the inspection of the preservation-packaging, packing and marking for shipment and storage shall be in accordance with the requirements of section 5 and the documents specified therein.

5. PREPARATION FOR DELIVERY

(The preparation for delivery requirements specified herein apply only for direct Government procurements. For the extent of applicability of the preparation for delivery requirements of referenced documents listed in section 2, see 6.6).

5.1 Preservation and packaging. Preservation and packaging shall be level A or C, as specified (see 6.2).

5.1.1 Level A.

5.1.1.1 Wire rope. Wire rope shall be preserved and packaged in accordance with MIL-STD-163. Unless otherwise specified (see 6.2), rope shall be furnished on reels. Phosphor bronze, corrosion-resistant and galvanized wire rope shall be packaged as specified for steel wire rope except preservative (protective) coating compounds shall not be required.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:10Z
Check the source to verify that this is the current version before use.

5.1.1.2 Seizing strand. Seizing strand shall be furnished on commercial type reels. Reels shall be of sufficient size and construction commensurate with the quantity of strands specified (see 6.2). Reels shall be wrapped with two thicknesses of waterproofed flexible barrier material conforming to PPP-B-1055 and secured in place with two tension tied steel bandings or wire in accordance with MIL-STD-163.

5.1.2 Level C. Wire rope and seizing strand shall be preserved and packaged to afford adequate protection against corrosion, deterioration, and damage during shipment from the supply source to the first receiving activity for immediate use or controlled humidity storage. The contractor may use his standard practice when it needs these requirements.

5.2 Packing. Packing shall be level A, B, or C, as specified (see 6.2).

5.2.1 Level A.

5.2.1.1 Wire rope shall be packed in accordance with MIL-STD-163.

5.2.1.2 Seizing strand reels shall be packed in unsheathed crates conforming to MIL-C-52950. Anchoring of contents and the closure and strapping of containers shall be in accordance with the appendix to MIL-C-52950. Reels of the "cross-line" and "clothes-line" type may be consolidated for shipment without over-packing. In consolidation, reels in multiples of three shall be lagged together with four lagging members of nominal 1- by 4-inch lumber nailed into the ends of the cross arm members.

5.2.2 Level B.

5.2.2.1 Wire rope on reels.

5.2.2.1.1 Reels exceeding 36 inch diameter. Unless otherwise specified (see 6.2), wire rope on reels exceeding 36 inches shall be packed as specified in 5.2.1.1.

5.2.2.1.2 Reels 36 inch diameter and under. Wire rope, packaged as specified, shall be packed in accordance with MIL-STD-163, level A, except that in lieu of wood lagging, the reels shall have a hardboard or paper overlaid veneer conforming to LLL-B-810 and PPP-V-205 respectively, placed directly on top of the wire rope. This form of lagging shall extend the full inside width between the reel flanges and shall overlap a minimum of 6 inches. The lagging board shall be secured with two steel straps or wires conforming to QQ-S-781, nailless, finish A or B, grade 2.

5.2.2.2 Seizing strand. Seizing strand shall be packed as specified in 5.2.1.2.

5.2.3 Level C. Wire rope shall be packed in a manner acceptable to the common carrier which will insure safe delivery at destination in a satisfactory condition at the lowest applicable rate.

5.2.4 Containers, packing, or method of shipment shall comply with Uniform Freight or National Motor Freight Classification Rules or Regulations or other carrier rules as applicable to the mode of transportation.

Check the source to verify that this is the current version before use.

5.3 Marking.

5.3.1 Military agencies. In addition to any special marking required by the contract or order, shipments shall be marked in accordance with MIL-STD-163. In addition, unsheathed crates (see 5.2.1.2) shall be marked with "Center of Balance" and "Use No Hooks" in accordance with MIL-C-52950.

5.3.2 Civil agencies. Marking for shipment shall be in accordance with FED-STD-123.

6. NOTES

6.1 Intended use. Wire rope and wire seizing strand covered by this specification are intended for use in general hauling, hoisting, lifting, transporting, well drilling, in passenger and freight elevators, and for marine mooring, towing, trawling, and similar work.

6.2 Ordering data. Acquisition documents should specify the following:

(a) Title, number, and date of this specification.
(b) Types, classes, construction (see 3.5), and sizes of wire rope and seizing strands required (see 1.2.1).
(c) If phosphor bronze should be other than composition A of QQ-B-750 (see 3.1.2).
(d) Diameter of wire strand centers (see 3.2.4).
(e) If other core materials are required (see 3.2.5).
(f) When wire rope should be prestretched (see 3.3.4).
(g) When other than uncoated carbon steel is required (see 3.3.5.1).
(h) Process of zinc coating required (see 3.3.5.2).
(i) Whether preformed or nonpreformed wire ropes and strands should be supplied (see 3.4.3).
(j) If a particular construction is required (see 3.5).
(k) If uncoated iron or steel wire ropes are not to be coated with a lubricant or are to be coated with a special lubricant during manufacture (see 3.6.2).
(l) If specific lubrication is required for coated (galvanized) steel and iron, corrosion-resistant steel, and phosphor bronze wire ropes (see 3.6.3).
(m) For type I, general purpose, class 1, 6 by 7:
    (1) Core required (see 3.11.1 and 3.11.1.3).
    (2) Material (see 3.11.1.2).
    (3) Finish (see 3.11.1.2.1).
    (4) Fabrication (see 3.11.1.4).
    (5) Lay (see 3.11.1.5).
(n) For type I, general purpose, class 2, 6 by 19:
    (1) Material (see 3.11.2.1).
    (2) Finish (see 3.11.2.1.1).
    (3) Cores (see 3.11.2.1.2).
    (4) Fabrication (see 3.11.2.1.3).
    (5) Lay (see 3.11.2.1.4).

Source: https://assist.dla.mil -- Downloaded: 202610-26T12:10Z
Check the source to verify that this is the currentversion before use.

(o) For type I, general purpose, class 3, 6 by 37:
(1) Material (see 3.11.3.1).
(2) Finish (see 3.11.3.1.1).
(3) Cores (see 3.11.3.1.2).
(4) Fabrication (see 3.11.3.1.3).
(5) Lay (see 3.11.3.1.4).

(p) For type I, general purpose, class 4, 8 by 19:
(1) Finish (see 3.11.4.1.1).
(2) Cores (see 3.11.4.1.2).
(3) Fabrication (see 3.11.4.1.3).

(q) For type I, general purpose, class 5, 6 by 61:
(1) Material (see 3.11.5.1).
(2) Finish (see 3.11.5.1.1).
(3) Cores (see 3.11.5.1.2).
(4) Fabrication (see 3.11.5.1.3).
(5) Lay (see 3.11.5.1.4).

(r) For type I, general purpose, class 6, 6 by 91:
(1) Material (see 3.11.6.1).
(2) Finish (see 3.11.6.1.1).
(3) Cores (see 3.11.6.1.2).
(4) Fabrication (see 3.11.6.1.3).
(5) Lay (see 3.11.6.1.4).

(s) For type II, elevator:
(1) Material (see 3.12.1).
(2) Fabrication (see 3.12.1.3).

(t) For type III, marine (cables), class 1, 6 by 6 deck lashing rope:
(1) Finish (see 3.13.1.3).

(u) For type III, marine (cables), class 2, 6 by 12 running rope:
(1) Material (see 3.13.2.2).
(2) Fabrication (see 3.13.2.5).

(v) For type III, marine (cables), class 3, 6 by 24 mooring lines:
(1) Fabrication (see 3.13.3.1.3).

(w) For type III, marine (cables), class 5, 6 by 3 by 19 spring lay:
(1) Finish (see 3.13.5.1.1).

(x) For type III, marine (cables), class 6, 6 by 42 tiller or hand control ropes:
(1) Material (see 3.13.5.5.2).
(2) If required, finish on steel (see 3.13.5.5.2.1).

(y) For type IV, miscellaneous, class 2, 18 by 7 rotation resistant:
(1) Finish (see 3.14.3.1.2).
(2) Cores (see 3.14.3.1.3).

(z) For type IV, miscellaneous, class 3, flattened strand:
(1) Cores (see 3.14.4.1.2). (For Navy aircraft elevator service, cores shall be 100 percent wire.)
(2) Fabrication (see 3.14.4.1.3).

(aa) For type V, auxiliary wire strands:
(1) Material (see 3.15.1.1).
(2) Fabrication (see 3.15.1.3).

(bb) Type V, auxiliary wire strands, class 2, 1 by 19 seizing strand:
(1) Material (see 3.15.2.1).
(2) Fabrication (see 3.15.2.3).

(cc) Type VI, small cords:
(1) Material (see 3.16.1).

Source: https://assist.dla.mil -- Downloaded: 202610-26T12:10Z
Check the source to verify that this is the current version before use.

(dd) When tensile test should be performed (see 4.4.1.2).
(ee) When torsion test should be performed (see 4.4.2).
(ff) Selection of applicable levels of preservation, packaging, and packing required (see 5.1 and 5.2).
(gg) Whether rope should be furnished other than on reels (see 5.1.1.1 and 5.1.1.2).
(hh) When reels exceeding 36 inches may be packed as specified (see 5.2.2.1.1).

6.3 General rules for selection of wire ropes. Wire ropes differ by the number of strands, by the diameters, number and arrangement of wires in the strands, by the finish of the wire and, finally, by the kind of core.

6.3.1 Strength. Ropes of the same type, diameter, class, wire finish and core have the same breaking strength, irrespective of their strand construction.

6.3.2 Flexibility. Ropes of the same type, class, wire finish and core made of strands with greater number of wires have better flexibility.

6.3.3 Resistance to abrasion. Ropes of the same type, class, made of strands with large diameter wires in the outer layer have longer wear resistance, but less flexibility.

6.3.4 Fatigue resistance. Ropes of the same type, class, wire finish, and core will show better fatigue resistance when the strand is one operation (as in Warrington construction) and where the lang lay can be used.

6.3.5 Heat resistance. Wire ropes with wire centers in strands, with wire strand cores or with IWRC should be used, wherever a danger of drying out or charring of fibrous material in wire strand centers and wire rope cores is present, as in steel mills, coke plants, cement mills, and oil cracking plants.

6.3.6 Crushing resistance. Wire ropes of small diameter with wire strand cores and IWRC have high crushing resistance.

6.3.7 Preforming. Preforming improves fatigue resistance, flexibility, even distribution of load to every wire, and resistance to kinking.

6.3.8 Lays. The most common lay in wire ropes is the right regular lay. Left regular lay is used where the untwisting rotation of the rope will counteract the unscrewing forces in the supported load as, for example, in drill rods and tubes for well servicing.

6.3.8.1 Lang lay. Because of greater length of exposed wires, the lang lay assures longer abrasion resistance of the wires, less radial pressure on small diameter sheaves or drums, by the ropes, and less bending stresses in wires than in regular lay wire ropes. Disadvantages of the lang lay are the tendency to kinking and unlaying or opening up of the strands which is undesirable for work where grit, dust, and moisture are present.

Source: https://assist.dla.mil -- Downloaded: 202610-26T12:10Z
Check the source to verify that this is the current version before use.

6.3.9 Construction.

6.3.9.1 When a specific construction is not required for the intended use, construction should not be specified but should be left to the option of the contractor.

6.3.9.2 When a specific construction is required for the intended use, construction specified should fall within the size and lay type limits of the particular construction.

6.4 Definitions and terms. The following definitions and terms for wire ropes and strands are used in this specification.

6.4.1 Strength.

6.4.1.1 Nominal strength. Nominal strength is the calculated published strength values which the designer uses when making design calculations.

6.4.1.2 Breaking strength. Breaking strength is the ultimate load at which a tensile failure occurs in the sample of wire rope being tested.

6.4.1.3 Acceptance breaking strength. Acceptance breaking strength is the minimum value on which compliance with the specifications is determined.

6.4.2 Bright wires. Bright wires are wires in ropes or strands that are uncoated.

6.4.3 Center. The center is the inner or foundation member (wire or twisted fibrous material) in a strand around which the wires are laid.

6.4.4 Circumference. The circumference is the measured perimeter of a circle circumscribing the wires of a strand or the strands of a wire rope.

6.4.5 Core. The core is the foundation member (a twisted fibrous material, a wire strand or an independent wire rope) of a wire rope around which the main strands are laid.

6.4.6 Ordered diameter. The ordered diameter of a wire rope or strand is the nominal diameter of the circumscribing circle (see figure 53).

6.4.7 Fibers. Fibers are the material of which applicable centers or cores are made.

6.4.8 Filler wires. Filler wires are small diameter wires for supporting and positioning main wires. Filler wires are included in the actual wire count and identification of the rope construction.

6.4.9 Galvanized (or coated) wire ropes and strands. Galvanized wire ropes and strands are wire ropes or strands made of zinc coated (galvanized) wires.

6.4.10 Galvanized (zinc coated) wires. In the manufacture of "galvanized" rope wire, the wire is zinc coated at finished size. In the manufacture of "drawn galvanized" rope wire, the wire is zinc coated before the last drawing

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:10Z
Check the source to verify that this is the current version before use.

operation. The zinc coating may be by either the hot-dip process or by the electrodeposition process. ("Galvanized" rope wire has 10 percent less tensile strength than uncoated rope wire; "drawn galvanized" rope wire has the same strength as uncoated rope wire.)

6.4.11 IWRC. IWRC is a complete small diameter wire rope used as a core in a larger wire rope.

6.4.12 Lang lay (see 6.4.13(a) and figure 4). In a lang lay wire rope the direction of lay of the wires in the strand and of the strand in the rope is the same. As a result the rope has an appearance that the wires are diagonal to the axis of the rope. The wires and the strands may run to the right; "Right Lang Lay" (comonly called - Lang Lay) or to the left; "Left Lang Lay" (on specific orders only).

6.4.13 Lay. The word "lay" is used by the wire rope industry in two different ways as follows:

(a) The lay is the manner in which the wires in a strand or the strands in a wire rope are twisted (see figure 4).
(b) The lay is the distance parallel to the longitudinal axis in which a wire makes a complete turn (spiral or helix) about the axis of the strand or a strand about the axis of the rope. It is also called the lay length or the pitch.

6.4.13.1 Pitch (lay length). See 6.4.13(b).

6.4.14 Regular lay. "Regular lay" designates that the wires in the rope strand lay in one direction while the strand in the rope lay in an opposite direction. The rope has therefore an outward appearance that all wires in the rope are roughly parallel to the longitudinal axis of the rope. There are two regular lays as follows:

(a) Right regular lay (commonly called "Regular lay"). The strands run in the rope downwards to the right (clockwise) while the wires in the strands run to the left (counterclockwise). This is the most used lay.
(b) Left regular lay. The strands in the rope run downwards to the left (counterclockwise) while the wires in the strand run to the right (clockwise) (see figure 4). The attachment point on the drum flange for securing the bitter end of left regular lay rope is the mirror image of the standard wire rope installation using right regular lay. Only in special cases should left regular lay rope be used and it must be specifically ordered.

6.4.15 Marline clad rope. Marline clad rope is a rope in which the strands are covered by a layer of tarred fibrous material wound to protect the hands, to cushion the strands in the rope and to protect them against wear.

6.4.16 Preformed strand. A preformed strand is a strand in which the wires are permanently shaped to the spiral form they assume in the strand.

6.4.17 Preformed wire rope. Preformed wire rope is a wire rope in which the strands are permanently shaped to the spiral form they assume in the wire rope.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T12:10Z
Check the source to verify that this is the currentversion before use.

6.4.18 Reels, manufacturing. Manufacturing or master reels are the reels on which the strands and the wire ropes are wound in one continuous length as they are formed on the rope closing machines.

6.4.19 Reels, shipping. Shipping reels are reels on which wire strands or wire ropes, cut to the ordered lengths, are wound from the manufacturing reel for shipment.

6.4.20 Brangle. A brangled strand is one that is shaped after fabrication (for example, triangular) by rollers or by other mechanical means.

6.4.21 Strand classification. The strand classification covered by the various rope classes are defined as follows:

(a) 7-wire classification - a strand having 3 through 14 wires, but not more than 9 outer wires in the strand.
(b) 19-wire classification - a strand having 15 through 26 wires but not more than 12 outer wires in the strand.
(c) 37-wire classification - a strand having 27 through 49 wires but not more than 18 outer wires in the strand.
(d) 61-wire classification - a strand having 50 through 74 wires but not more than 24 outer wires in the strand.
(e) 91-wire classification - a strand having 75 and more wires but not more than 30 outer wires in the strand.

6.5 These specifications and testing procedures set forth in this document are applicable to wire rope made or manufactured pursuant to Government order only and not intended to apply to rope made or manufactured for any other purchaser.

6.6 Sub-contracted material and parts. The preparation for delivery requirements of referenced documents listed in section 2 do not apply when material and parts are procured by the contractor for incorporation into the equipment and lose their separate identity when the equipment is shipped.

6.7 Changes from previous issue. Asterisks are not used in this revision to identify changes with respect to the previous isuse, due to the extensiveness of the changes.

TABLE I. Tensile strength requirements of main wires removed from finished rope.

Material	Tensile strength (minimum)	
	Uncoated or drawn galvanized	Galvanized at finish size
Designated commercially as:	Lb/in^2	Lb/in^2
Iron	70,000	55,000
Annealed steel	---	60,000
Traction steel	160,000	---
Improved plow steel:		
0.030 inch diameter and smaller	244,000	219,000
.031 - .060 inch	238,000	214,000
.061 - .100 inch	230,000	207,000
.101 - .140 inch	225,000	202,000
.141 - .190 inch	218,000	196,000
.191 - .250 inch	209,000	---
Extra improved plow steel:		
0.030 inches diameter and smaller	268,000	---
.031 - .060 inch	262,000	---
.061 - .100 inch	253,000	---
.101 - .140 inch	248,000	---
.141 - .190 inch	240,000	---
.191 - .250 inch	230,000	---
Phosphor bronze	90,000	---
Corrosion resistant steel	205,000	---

TABLE II. Weight of zinc coating in rope and strand wires removed from finished rope.

Galvanized at finish size		Drawn galvanized wire	
Wire diameter	Minimum weight of zinc coating	Wire diameter	Minimum weight of zinc coating
Inch	Ounce per square foot	Inch	Ounce per square foot
0.010 - 0.015	0.05	0.010 - .015	0.05
.0155 - .027	.10	Over .015 - .028	.10
.028 - .047	.20	Over .028 - .060	.20
.048 - .054	.40	Over .060 - .090	.30
.055 - .063	.50	Over .090 - .140	.40
.064 - .079	.60		
.080 - .092	.70		
.093 - larger	.80

TABLE III. Torsion values for bright (uncoated) and drawn-galvanized main wires removed from finished rope.

Material	Torsion (revolutions) per 100 wire diameters in length 1/
Extra improved plow steel	27.0 - 100 d 2/
Improved plow steel	28.0 - 25 d 2/
Traction steel	30.5 - 25 d 2/

1/ To convert to torsions in 8 inches, divide torsions in 100 d by 12.5 d.
2/ d - diameter of wire. Zinc-coated (galvanized) at finish size main wires will not be required to meet these torsion values.

TABLE IV. Permissible variations in wire diameters of one diameter wires removed from finished ropes.

Wire diameters	Uncoated (bright) and drawn-galvanized wires	Zinc coated at finish size
Inch	Inch	Inch
0.010 - .027	0.0015	--
.028 - .059	.002	0.0035

TABLE V. Rope or strand diameters for all ropes except type II elevator, type III springlay, type IV, 5 by 19 marline clad, type V, seizing strand, and type VI, small cords.

Rope diameter (inches)	Tolerance (percent)	
	Under	Over 1/
3/16	0	7
7/32	0	6
1/4	0	6
5/16	0	6
3/8 and larger	0	5

1/ A question may develop as to whether or not the wire rope complies with the oversize tolerance. In such cases, a tension of not less than 10 percent nor more than 20 percent of nominal required breaking strength is applied to the rope and the rope again measured while under this tension.

INSTRUCTIONS: In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge *(DO NOT STAPLE)*, and mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretation, was too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

NOTE: This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document*(s)* or to amend contractual requirements.
