MILITARY SPECIFICATION

SHIRT, MAN'S: SHORT AND LONG SLEEVES POLYESTER/COTTON(DURABLE PRESS) AND LONG SLEEVES, POLYESTER/WOOL

This specification is approved for use by all Departments and Agencies of the Department of Defense

1. SCOPE

*1.1 Scope This specification covers the requirements for men's blue, polyester/cotton durable press shirts, short and long sleeves, and a polyester/wool long sleeve shirt.

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Defense Personnel Support Center, Clothing and Textiles Directorate, Attn: DPSC-FSSD, 2800 South 20th Street, Philadelphia, PA 19101-8419, by using the Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

AMSC N/A FSC 8405

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

Check the source to verify that this is the current version before use.

*1.2 Classification The shirts shall be of the following types and classes, as specified (see 6.2):

Type I -Long sleeve shirt
Class 1 - Polyester/cotton broadcloth, USAF Blue 1550
Class 2 - polyester/wool tropical cloth,USAF Blue 1608
Type II - Short sleeve shirt
Class 1 - Polyester/cotton broadcloth, USAF Blue 1550

1.2.1 Sizes The men's shirts, short and long sleeves, shall be furnished in the following sleeve lengths and sizes, as specified (see 6.2):

Schedule of sizes (Types I and II) and sleeve lengths (Types I)

13-1/2	29	30	31	32	33	34	35	36	37	
14	29	30	31	32	33	34	35	36	37	38
14-1/2	29	30	31	32	33	34	35	36	37	38
15	29	30	31	32	33	34	35	36	37	38
15-1/2	29	30	31	32	33	34	35	36	37	38
16	29	30	31	32	33	34	35	36	37	38
16-1/2		30	31	32	33	34	35	36	37	38
17				32	33	34	35	36	37	
17-1/2				32	33	34	35	36	37	
18					33	34	35

of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 First article When specified (see 6.2), a sample shall be subjected to first article inspection in accordance with 4.3.

3.2 Samples Guide Samples, when furnished, are solely for guidance and information to the contractor (see 6.4) Variations from the document may appear in the sample, in which case the document shall govern.

*3.3 Materials It is encouraged that recycled and reclaimed materials be used when practical as long as it meets the requirements of this document.

* 3.3 1 Basic material The basic material shall be a polyester/cotton broadcloth, USAF Blue, Shade No. 1550, conforming to class 1, 3 or 4 of MIL-C-43992 for the type I and II, class 1 shirts and polyester/wool tropical cloth, USAF Blue, Shade No. 1608 conforming to type III, class 4 of MIL-C-21115 for the type I class 2 shirt.

* 3.3.2 Interlining The material for interlining the collar, collarstand, cuffs, pocket flaps, and shoulder loops shall be polyester fiber cloth conforming to A-A-50135. The color shall be white for the type I and II, class 1 shirts and charcoal gray or black for the type II, class 2 shirt.

3.3.3 Collar stays The collar stays shall be made from polyethylene terephthalate plastic sheet conforming to A-A-56021, except the thickness shall be 0.014 ±0.001 inch, the color shall be natural (clear or opaque), and the transparency and optical properties shall not apply. The stays shall measure 3/8 ±1/32 inch wide and 3 to 3-1/4 inches long. As an option, the stays shall have two slots 1-1/8±1/32 inches long, centered along the length of the stay. Each slot shall be 1/8±1/32 inch wide and spaced an equal distance across the width of the stay. Either both ends shall be rounded or pointed with the points rounded, or one end rounded and one end cut at an angle with the point rounded. Testing shall be as specified in 4.4.1.

*3.3.4 Thread The thread shall be cotton-covered polyester, Ticket No. 70, 2 ply or Ticket No. 100, 2 ply conforming to A-A-50199. Spun polyester thread, Ticket No. 100, 2 ply or Ticket No. 70, 2 ply conforming to MIL-T-43624 may be substituted for the cotton-covered polyester thread. The thread shall be stabilized so as not to shrink in boiling water more than 1.5 percent when tested as specified in table IV. In addition, when purl type buttonholes are used, thread conforming

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T04:53Z
Check the source to verify that this is the current version before use.

to type I, Ticket Nos. 40, 3 ply for the needle and 70, 3 ply for the bobbin of A-A-52094 shall be used.

* 3.3.4.1 Color The color of the thread for the type I (Class 1) and the type II (Class 1) shirt shall be white AH, C.A. 66050. The thread for the type I (Class 2) shirt shall be Navy Blue AT, C.A. 66060, in accordance with the DoD Standard Shades for Sewing Threads.

* 3.3.5 Buttons The buttons shall conform to type II, class K, style 25, 19 line for shirts of V-B-871. The color shall be white BA, C.A. 62031 for the type I (Class 1) and type II (Class 1) shirts and Blue BV, C.A. 62003 for the type I (Class 2) shirt, in accordance with the DoD standard shades for buttons.

3.3.6 Labels Each shirt shall have a size label, identification label, and instruction label or a combination identification and instruction label conforming to DDD-L-20. The fastness to laundering requirements of DDD-L-20 shall apply.

3.3.6.1 Size label The size label shall conform to type IV, class 2, of DDD-L-20.

*3.3.6.2. Identification label The identification label shall conform to type IV, class 1 and contain the following information:

SHIRT,MAN'S, LONG SLEEVE,POLY/WOOL
BLUE 1608
DLA100-00-C-0000(Example)
8405-00-000-0000(Example)
NAME OF CONTRACTOR(Example)
NAME OF MANUFACTURER(If other than contractor)

* 3.3.6.3. Instruction labels

3.3.6.3.1 Type I (Class 1) and Type II (Class 1) shirts The instruction label for the type I (Class 1) and type II (Class 1) shirts shall conform to type VI, class 3 and contain the following instructions:

WASHING INSTRUCTIONS

MACHINE WASH: Use permanent press cycle, moderately hot water (115^{0} F), and soap or mild detergent.
HAND WASH: Use moderately hot water (115^{0} F), and soap or mild detergent.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T04:53Z
Check the source to verify that this is the current version before use.

DO NOT WRING OR TWIST
MACHINE DRY: Dry in tumble dryer at warm setting. Remove immediately at end of drying. Shape and hang.
DRIP DRY: Remove from water before last spin cycle. Shape and hang.
PRESSING: Press at moderate heat setting.

DO NOT REMOVE THIS LABEL

* 3.3.6.3.2 Type I (Class 2) shirt The instruction label for the type I (Class 2) shirt shall conform to type VI, class 3 and shall specify: DRY CLEAN ONLY.

3.3.6.4 Combination identification and instruction label The combination identification and instruction label shall conform to type VI, class 15 of DDD-L-20 and shall include the instruction specified in 3.3.6.2 and 3.3.6.3. When combined, the item nomenclature shall not be repeated.

3.4 Design The dress type shirt shall have a soft collar with stays, patch pockets with a button-down flap on each side of front, a pencil pocket under the patch pocket on left front (as worn) and buttoned shoulder loops. The collar, collarstand, cuffs (type I, classes 1 and 2), pocket flaps, and shoulder loops are interlined. The sleeves of the type I, classes 1 and 2 shirts have continuous bindings on openings and convertible cuffs with two buttonholes in each cuff so they can either be buttoned or fastened with cuff links. The shirts shall be of safety stitch construction and have a yoke (see figures 1 and 2).

* 3.5 Patterns Standard patterns to be used to cut working patterns will be furnished by the Government (see 6.4). The working patterns shall be identical to the Government patterns. Neither the Government patterns nor the working patterns shall be altered in any way, except that additional notches for use during construction are allowed on the working patterns. Also, minor modifications are permitted where necessary when using automatic equipment. These modifications shall not alter the dimensional, serviceability or appearance requirements cited in the specification. The standard patterns provide an allowance of 1/4 inch for all seams except 3/8 inch for the bottom hem, attaching the cuffs (types I), and for setting the pockets. Unless otherwise indicated in Table II, seams shall be in accordance with these seam allowances. Minor modifications are permitted, where necessary, to permit use of automatic equipment as long as there is no effect on specified dimensions.

Check the source to verify that this is the current version before use.

3.5.1 Pattern parts The component parts shall be cut from the material as specified in accordance with pattern parts indicated in table I.

TABLE I. List of pattern parts

Material	Pattern nomenclature	Cut parts
Basic material (see 3.3.1)	Front (types I)	2
	Front (type II)	2
	Back	1
	Yoke	2
	Sleeve (types I)	2
	Sleeve (type II)	2
	Sleeve facing (binding) (types I)	2
	Cuff (types I) 1/	4
	Collar leaf	2
	Collarstand	2
	Pocket	2
	Pencil pocket	1
	Pocket flap	4
	Shoulder loop	4
Interlining cloth (see 3.3.2)	Collarstand interlining	1
	Cuff interlining (types I)	2
	Collar leaf interlining	1
	Pocket flap interlining	2
	Shoulder loop interlining	2
Shapers	Finished pocket	
	Finished flap	

1/ When optional cuff setting operation is used (see operation 20.c), 1/8 inch may be added to the patterns. However, finished cuff measurements shall be maintained.

3.6 Construction The construction of the shirt shall conform in all respects to the requirements specified in table II and herein. Figures 1 and 2 show the general style of the short and long sleeve shirts.

3.6.1 Figures The figures are furnished for information purposes only. When inconsistencies exist between the written specification and the figures, the written specification shall govern.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T04:53Z
Check the source to verify that this is the current version before use.

3.6.2 Stitches,seams and stitching All stitches, seams and stitching types shall conform to FED-STD-751. When two or more seam or stitch types are given for the same part of an operation, any one of them may be used. When stitch type 401 is used, the looper thread shall be on the inside of the shirt. Seam allowances shall be maintained with seams sewn so that no raw edges,runoffs twists, pleats, puckers, or open seams occur. All seams shall start and finish evenly. Thread tension shall be maintained (see 6.5) so that there is no tight or loose stitching. The gage of the safety stitch seams shall be 1/4 inch. The guides and knives on safety trimming shall not exceed 1/16 inch. The edge and top stitching shall be uniformly gaged. Seams required to be worked out, that have a depth between the fold of 1/16 inch or more, shall be considered a defect.

3.6.2.1 Type 301 stitching Ends of all stitching shall be backstitched or overstitched not less than 1/4 inch except where ends are turned under or caught in other seams or stitching. Ends of a continuous line of stitching shall overlap not less than 1/2 inch. Thread tensions shall be maintained so that there will be no loose stitching resulting in loose bobbin or top thread, or excessively tight stitching resulting in puckering of the material sewn. The lock shall be imbedded in the material sewn.

3.6.2.2 Repairs of type 301 stitching Repairs of type 301 stitching shall be as follows:

a. When thread breaks, skipped stitches, run-offs, or bobbin run-outs occur during sewing, the stitching shall be repaired by restarting the stitching a minimum of 1/4 inch back of the end of the stitching 1/

b. Except for prestitching, thread breaks, or two or more consecutively skipped or run-off stitches noted during inspection of the item (in-process or end item) shall be repaired by overstitching. The stitching shall start a minimum of 1/4 inch in back of the defective area, and continue a minimum of 1/4 inch beyond the defective area onto the existing stitching. Loose or excessively tight stitching shall be repaired by removing the defective stitching without damaging the materials, and restitching in the required manner. 1/

1/ When making the above repairs, the ends of the stitching are not required to be backstitched.

3.6.2.3 Types 401, 515, 516, and 519 stitching Thread tension shall be maintained so that there will be no loose or excessively tight stitching resulting in puckering of the materials sewn. Type 301 stitching may be used to repair type 401 stitching.

3.6.2.4 Automatic stitching Automatic machines may be used to perform any of the stitch patterns provided the requirements for the stitch pattern, stitches per inch, and size and type of

Source: https://assist.dla.mil Downloaded: 2026-10-26T04:53Z
Check the source to verify that this is the current version before use.

thread are met; and at least three tying, overlapping or backstitches are used to secure the ends of the stitching. When a government finished shaper is furnished, the component shall conform to that pattern.

3.6.2.5. Thread ends All thread ends shall be trimmed to 1/4 inch maximum length.

3.6.3 Bartacks Bartacks shall be 1/2 (±1/16)inch long, 1/8 (±1/32) inch wide and shall contain 28 stitches (minimum). Bartacks shall be free from thread breaks and loose stitching.

3.6.4 Stitches per inch The minimum and maximum number of stitches per inch shall be as specified in table II.

3.6.5. End item seam appearance The appearance rating of the seams and stitching of the finished shirt shall be 4.0 or greater. This requirement shall be applicable to all seams including the collar, shoulder loops, armholes, side and underarm seams, sleeve cuffs and binding (Types I), and sleeve hem (Type II) (see 4.5).

3.6.6. Buttonholes The buttonholes shall be straight-cut, purl, or whip type, and the finished cut length shall be 1/2 to 9/16 inch long. The stitching shall be securely caught in the fabric and the ends shall be securely tacked. When a purl-type buttonhole is used, the purling shall be on the outside of the shirt. All loose thread ends shall be trimmed or fused to within 1/8 inch of the tack.

3.6.7 Repairs Repairs such as mends, darns, patches or splices are not permitted on the shirt.

3.7 Manufacturing operations requirements The shirt shall be manufactured in accordance with operation requirements specified in Table II. The contractor is not required to follow the exact sequence of operations listed unless otherwise specified. Any additional basting or holding stitches used to facilitate manufacture are permissible provided the thread is removed or does not show on the finished shirt. Minor modifications are permitted where necessary when using automatic equipment. These modifications shall not alter the appearance, serviceability, or dimensional requirements cited in this specification.

3.7.1 Shade and size marking The component parts of the shirt shall be marked, ticketed, or bundled to insure a uniform shade and size throughout the shirt. Any method may be used except:

a. Corrosive metal fastening devices.

b. Sew-on type tickets.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T04:53Z
Check the source to verify that this is the current version before use.

c. Adhesive type tickets which leave an impression or traces of paper adhesive on the material upon removal of the tickets.

d. Any marking medium which would tend to leave a permanent mark.

3.7.1.1 Ink pad numbering machine, rubber stamp, or pencil The use of ink pad numbering machine, rubber stamp, or pencil will be acceptable provided the numbers do not show through the outside of the shirt and the numbers are covered by the seam allowance

*3.8 Abbreviations in Table of Operations The abbreviations used in Table II are as follows:

Stch	-	Stitch
In	-	Inch
Ndl	-	Needle
Bob	-	Bobbin
Lpr	-	Looper
Mchne	-	Machine
Brtck	-	Bartack
Comrcl	-	Commercial
Smlr	-	Similar

3.9.1 Methods of measuring Shirts shall be buttoned, laid smooth and flat and measured as follows:

Collar length	Measure from center of collar button to front cut-end of buttonhole.
1/2 Chest	Measure from folded edge to folded edge, at base of armhole.
Back length	Measure at center back from collar setting seam to bottom edge of shirt
Type I sleeve length	Measure from center back at collarstand seam, diagonally across back to lower edge of

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T04:53Z
Check the source to verify that this is the current version before use.

	back yoke and down sleeve to bottom edge of cuff.
Type II sleeve length	Measure from base or armhole along underarm seam to bottom edge of hem.
1/2 Waist	Measure from folded edge to folded edge at narrowest area of the waist.
Cross back (lower yoke seam)	Measure at lower yoke seam from armhole to armhole.

3.10 Workmanship The finished shirt shall confirm to the quality of product established by this specification. As a final step in the contractor's production control plan before formation of a lot, each shirt shall be examined, buttoned, pressed and laid out flat on a table prior to folding for packaging. A shirt containing a selected defect shall not be included in the end item lot. selected defects are those defects listed in MIL-STD-1492, indicated by an asterisk (*). The occurrence of defects shall not exceed the applicable point value or defect limit.

4. QUALITY ASSURANCE PROVISIONS

*4.1 Responsibility for inspection Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements (examination and tests) as specified herein. Except as otherwise specified in the contract or purchase order, the contractor may use his own or any other facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the government. The Government reserves the right to perform any of the inspections set forth in this specification where such inspections are deemed necessary to insure supplies and services conform to prescribed requirements.

4.1.1 Responsibility for compliance All items shall meet all requirements of section 3 and 5. The inspection set forth in this specification shall become a part of the contractor's overall inspection system or quality program. The absence of any inspection requirements in the specification shall not relieve the contractor of the responsibility of insuring that all products or supplies submitted to the Government for acceptance comply with all requirements of the contract. Sampling inspection, as part of manufacturing operations, is an acceptable practice to ascertain conformance to requirements, however, this does not authorize submission of known defective material, either indicated or actual, nor does it commit the Government to accept defective material.

4.1.2 Certificates of compliance When certificates of compliance are submitted, the Government reserves the right to check test such items to determine the validity of certification.

Source: https://assist.dla.mil Downloaded: 2026-10-26T04:53Z
Check the source to verify that this is the current version before use.

4.2 Classification of inspection The inspection requirements specified herein are classified as follows:

a. First article inspection (see 4.3).

b. Quality conformance inspection (see 4.4)

4.3 First article inspection When a first article is required (see 3.1 and 6.2) the inspection shall include the examination of 4.4.3. The presence of any defect shall be cause for rejection of the first article.

4.4 Quality conformance inspection Unless otherwise specified, sampling for inspection shall be performed in accordance with MIL-STD-105. The acceptance criteria as specified in the contract or purchase order shall be binding.

*4.4.1 Component and material inspection In accordance with 4.1, components and materials shall be inspected in accordance with all the requirements of referenced documents unless otherwise excluded, amended, modified or qualified,in this specification or applicable purchase document.

*4.4.1.1 Component testing.In addition to any testing required by 4.4.1,components listed in table IV shall be tested for the characteristics noted. The methods of testing specified in table IV shall be followed. The lot and sample sizes shall be as follows :

Lot size	Sample size
800 or less	2
801 to 22,000 inclusive	3
22,001 and over	5

The lot shall be unacceptable if one or more sample units fail to meet any test requirement specified. The lot size units and sample units shall be as follows:

Component	Lot size unit	Sample unit
Collar stays	Gross	4 each
Thread	Spool	3 each

Check the source to verify that this is the current version before use.

TABLE IV. Component tests

Component	Characteristic	Requirement paragraph	Test method
Collar stays	Width	3.3.3	Gage 1/
	Length	3.3.3	Gage 1/
Thread	Shrinkage	3.3.4	ASTM D 204 2/

1/ A certificate of compliance shall be submitted and will be acceptable for the stated requirement.
2/ Shrinkage in dry heat shall not apply.

4.4.2 In-process inspection Inspection shall be made at any point or during any phase of the manufacturing process to determine whether construction details which cannot be examined in the finished product are in accordance with specified requirements. This inspection shall include verification that the working patterns conform to the government patterns in all respects. Whenever nonconformance is noted, corrections shall be made to the items affected and lot in process. Items which cannot be corrected shall be removed from production.

4.4.3 Point count inspection. Sampling and inspection provisions for end item examination of dress "D" shirts, dimensional examination, and packaging inspection shall be performed in accordance with MIL-STD-1492. The occurrence of defects shall not exceed the applicable point value limit specified in MIL-STD-1492.

4.4.5 Palletization examination An examination shall be made to determine that the palletization complies with the section 5 requirements. Defects shall be scored in accordance with the list below. The sample unit shall be one palletized unit load fully packaged. The lot size shall be the number of palletized unit loads in the inspection lot. The inspection level shall be S-1, and the acceptable quality level , (AQL) expressed in terms of defects per hundred units, shall be 6.5 in accordance with MIL-STD-105.

Examine	Defect
Finished dimensions	Length, width, or height exceeds specified maximum requirements.
palletization	Pallet pattern not as specified. Interlocking of loads not as specified. Load not bonded with required straps

Check the source to verify that this is the current version before use.

	as specified.
Weight	Exceeds maximum load limits.
Marking	Omitted; incorrect; illegible; of improper size, location, sequence, or method of application.

4.5 Methods of inspection

4.5 1 Appearance of seams Seams suspected of being puckered shall be examined at a distance of three feet in comparison with the AATCC photographic comparative ratings for single needle seams, Test Method 88B. Puckering on a major portion of a seam that is worse than a rating of 4 shall be scored as a puckered seam (see 6.5).

5. PACKAGING

5.1 Preservation Preservation shall be level A, C, or Commercial as specified (see 6.2).

5.1.1 Level A Each fully buttoned shirt shall be neatly folded to measure approximately 14-1/2 by 10-1/2 inches. The folded shirt shall be secured with stainless steel (AISI Type 304 or 316) pins, aluminum clips, or plastic fasteners and inserted in a snug-fitting, clear polyethylene film bag conforming to A-A-50083.

5.1.2 Level C Shirts shall be preserved in accordance with the applicable requirements of MIL-STD-2073-1 for this level.

5.1.3 Commercial Shirts shall be preserved in accordance with ASTM D 3951.

5.2 Packing. Packing shall be level C or Industrial as specified (see 6.2).

*5.2.1 Level A Shirts, of one type, class, and size, preserved and packaged as specified in 5.1, shall be packed in exterior-type shipping containers that conform to PPP-B-601, overseas type. The closure of the shipping container shall be in accordance with the appendix of the applicable shipping container specification.

5.2.2 Level B Shirts, of one type, class, and size, preserved and packaged as specified in 5.1 shall be packed in exterior-type shipping containers that conform to PPP-B-636, class wheather resistant. The closure of the shipping container shall be in accordance with the appendix of the applicable shipping container specification.

Check the source to verify that this is the current version before use.

5.2.3 Level C Shirts, of one type, class, and size, preserved and packaged as specified in 5.1, shall be packed in accordance with MIL-STD-2073-1 requirements for this level.

5.3 Marking

5.3.1 Levels A, B, and C In addition to any special or other identification markings required by the contract or purchase order (see 6.2), each unit pack and exterior container shall be marked in accordance with MIL-STD-129 or ASTM D 3951, as applicable.

5.3.2 Commercial Each unit pack and exterior container shall be marked in accordance with ASTM D 3951.

5.4 Palletization Unitized loads, commensurate with the level of packing specified in the contract or purchase order shall be palletized in accordance with MIL-STD-147. Palletized loads shall be uniform in size and quantity to the greatest extent possible. If the container is of a size which does not conform to any of the pallet patterns specified in MIL-STD-147, the pallet pattern shall first be approved by the contracting officer.

6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

* 6.1 Intended use The type I (long sleeve) and type II (short sleeve), class 1 shirts are intended for wear by male military personnel of the department of Defense. The type 1 (Long sleeve), class 2 shirt is intended to be worn by security police as part of the dress uniform.

* 6.2 Acquisition requirements Acquisition documents should specify the following:

a. Title, number, and date of this specification.
b. Type, class, size, and sleeve length required (see 1.2)
c. Issue of DoDISS to be cited in the solicitation, and if required the specific issue of individual documents referenced (see 2.1 and 2.2).
d. When a first article sample is required, (see 3.1)
e. Selection of applicable levels of preservation and packing (see 5.1 and 5.2).
f. When weather-resistant grade fiberboard shipping containers are required for level B packing (see 5.2.2.).
g. When palletization is required (see 5.3).
h. When all packaging data is to be specified in MIL-STD-2073-1 and MIL-STD-2073-2.

Check the source to verify that this is the current version before use.

6.3 First article When first article inspection is required, the contracting officer should provide specific guidance to offerors whether the item should be a preproduction sample or initial production item inspected and approved under the appropriate provision of FAR 52.209. The contracting officer should specify the appropriate type of first article and the number of items to be furnished. The contracting officer should also include specific instructions in acquisiton documents regarding arrangements for examinations, approval of first article test results and disposition of first articles. Invitations for bids should provide that the government reserves the right to waive the requirement for samples for first article inspection to those bidders offering such products, who wish to rely on such production or test, must furnish evidence with the bid that prior Government approval is presently appropriate for the pending contract. Bidders should not submit alternate bids unless specifically requested to do so in the solicitation.

6.4 Samples and patterns For access to shade samples and patterns address the procuring activity issuing the invitation for bids.

6.5 Seam appearance In order to avoid puckering and to produce the flattest seams possible, consideration must be given to the following:

a. The needles used for all seams should be as fine as possible, consistent with the size or diameter of the thread used.

b. The throat plate hole should be no larger than necessary to permit free entry of the needle and to prevent flagging.

c. The finest feed (approximately 18 teeth) possible should be used with a pressure foot to exactly match the shape and size of the feed. The face of the pressure foot (underside next to the feed on the machine) should be highly polished to eliminate roughness and reduce drag. Diamond shape feed teeth have been used quite successfully.

d. The lightest pressure foot pressure should be used to prevent stretching of the top ply of material.

e. In the safety stitch machine, (515, 516, and 519) the upper and lower trimming knives should be kept at peak sharpness to prevent "dragging" of the edge of the fabric.

f. In stitch type 301 sewing, the bobbin tension should be adjusted so that when a full bobbin is placed in the bobbin case and threaded through the tension spring, the bobbin and case shall ride slowly down the thread when the free end of the thread is held in the vertical position. Needle tension should be

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T04:53Z
Check the source to verify that this is the current version before use.

adjusted after the bobbin tension to provide slightly more needle thread than bobbin thread in the stitch.

g. When sewing with stitch type 401 (including the seaming row of the safety stitches), the thread ratio (needle and looper) should be adjusted to produce a stitch with 60 to 70 percent needle thread, and both needle and looper thread tension should be held to the minimum.

h. Thread take-up mechanism should be set on all machines to relieve as much tension as possible when forming the stitch. All thread contacts should be well polished and free of burrs, cuts, and rough spots.

6.6 Government-furnished property. The contracting officer should arrange to furnish the patterns listed in 3.5.

* 6.7 Subjects (key word) listing

cloth,polyester/cotton broadcloth
cloth,polyester/wool tropical
garment, long-sleeved
garment, short-sleeved
uniform,dress,security police

6.8 Changes from previous issue The margins of this specification are marked with asterisks to indicate where changes (additions, modifications, corrections, deletions) from the previous issue were made. This was done as a convenience only and the government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and contractors are cautioned to evaluate the requirements of this document based on the entire content irrespective of the marginal notations and relationship to the last previous issue.
