MILITARY STANDARD

ABBREVIATIONS FOR USE ON DRAWINGS, AND IN SPECIFICATIONS, STANDARDS AND TECHNICAL DOCUMENTS

1. SCOPE

1.1 Scope. The terms and abbreviations in this standard are limited to those commonly used on drawings, and in specifications, standards, and technical documents.

1.2 Application. This standard provides a list of abbreviations authorized for use on drawings, and in specifications, standards, and other technical documents.

1.2.1 Short words. Abbreviations of words having five or fewer letters are not included except those established by longstanding practice.

1.2.2 Field of use. Where an abbreviation is intended primarily for a particular field of application, that field is indicated in parentheses following the term, eg, fast operate (relay).

1.2.3 Combining form. Where two abbreviations are listed for the same word, the first applies to the word used alone, while the one designated (comb form) is to be used only in combination with abbreviations of other words to form an abbreviation for a word combination.

2. REFERENCED DOCUMENTS

2.1 General. The issue of the following documents in effect on the date of invitation for bids form a part of this standard to the extent specified herein.

2.2 Standards

ANSI Y10.3-1968	Quantities Used in Mechanics of Solids, Letter Symbols for
ANSI Y10.5-1968	Quantities Used in Electrical Science and Electrical Engineering, Letter Symbols for
ANSI Y10.20-1975 including ANSI Y10.20a 1975	Mathematical Signs and Symbols for use in Physical Sciences and Technology
ANSI/IEEE STD 260-1978	Letter Symbols for SI Units, and Certain Other Units of Measurement
ASTM E380-1979	Standard for Metric Practice

2.3 Other publications.

Webster's Third New International Dictionary, Unabridged.

Copies of listed Industry Association Standards are available to Military activities through the DOD Single Stock Point, US Naval Supply Depot (NSD 103), 5801 Tabor Avenue, Philadelphia, PA 19120. Nonmilitary activities may obtain copies from:

(ANSI) American National Standards Institute
1430 Broadway, New York, NY 10018

(ASTM) American Society for Testing and Materials
1916 Race Street, Philadelphia, PA 19103

(IEEE) The Institute of Electrical and Electronics Engineers, Inc.
345 E. 47th Street, New York, NY 10017

3. DEFINITIONS

3.1 Abbreviations. An abbreviation is a shortened form or abridgment of a word, expression or phase used to conserve space and time.

4. GENERAL REQUIREMENTS

4.1 Clarity. Abbreviations shall be used only when their meanings are unquestionably clear to the intended reader. WHEN IN DOUBT, SPELL IT OUT. Abbreviations that are not in common use and are to be used frequently in a document or where there is doubt that the reader will understand their meanings, should be clarified when first used: by spelling out the word or complete phrase, followed by the abbreviation in parentheses.

4.2 Word combinations. Portions of an abbreviation for a word combination shall not be separated for use singly. Single abbreviations may be combined when necessary if there is no abbreviation listed for the combination.

4.3 Syntax. Unless otherwise indicated herein, the same abbreviation shall be used for all tenses, the possessive case, participle endings, the singular or plural, and the noun and modifying forms of a term.

4.4 Capitalization. Abbreviations included in the left-hand column provide the form for use on drawings and documents produced in upper-case characters. The abbreviations in the right-hand column provide the form required for documents produced in lower-case characters; however, these abbreviations may be capitalized when required for emphasis. Abbreviations that are capitalized in the right-hand column are a continuation of prior usage and in general are abbreviations for major systems or are recognized as having significant application when used in text. Abbreviations are not listed in the right-hand column for many short words. If space limitations make it necessary to abbreviate such terms, the abbreviation which appears in the left-hand column shall be used except for the substitution of lower-case letters.

4.5 Punctuation.

4.5.1 Punctuation marks which do not appear in this standard shall not be used with the abbreviation of a technical term; however, an abbreviation spelling a whole word should include a period if the abbreviation is not obvious to its intended reader. An exception is made for abbreviations used in computer applications wherein a hyphen (-) may be substituted for a blank space which appears in an abbreviation, eg. 'seq-chk' in lieu of 'seq chk'.

4.5.2 Hyphens should be used with adjectival forms of abbreviations and symbols, eg, a 35-mm film.

4.6 Revised abbreviations. Abbreviations in this standard reflect recent changes in the state-of-the-art.

4.7 Symbols. The distinction between abbreviations and symbols is tricky, because it depends upon context, rather than form. For example, "the current is 5 amps" and "the pressure is 3 psi" are allowable uses of abbreviations, whereas writing "I = 5 amp" and "p = 3 psi" are incorrect. Whenever a mathematical operation or sign is involved, such as the equality sign (=) or the division sign (/), abbreviations cannot be used. Mathematical operations are performed only upon symbols; for example, $I = 5$ A and $p = 3$ lbf/in^2. Symbols that appear in the following documents are preferred (for example, "the current is 5 A") in lieu of abbreviations that appear in this standard and shall be used in lieu of abbreviations for terms that do not appear herein:

a. Chemical Symbols: Webster's Unabridged Dictionary (International Tables of Chemical Elements)

b. Mathematical Symbols: ANSI Y10.20 and Y10.20a

c. Quantity Symbols: ANSI Y10.3 and ANSI Y10.5

d. Unit Symbols: ANSI/IEEE STD 260

e. Metric Practices: ASTM E380

4.8 Abbreviations used in existing technical documents. Unless otherwise specified, any changes or revisions to an existing drawing, specification, standard, or technical document prepared under a previous edition of this standard, may use the latest abbreviations, although the superseded abbreviations may appear elsewhere in the document.

INSTRUCTIONS: In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge *(DO NOT STAPLE)*, and mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretation, was too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

NOTE: This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document*(s)* or to amend contractual requirements.
