MILITARY STANDARD

AUTOMATED ENGINEERING DOCUMENT PREPARATION SYSTEM (AEDPS)

1. SCOPE

1.1 General. This standard prescribes the requirements for the preparation of Military Specification Exceptions (MSE's) and provides a description of the Automated Engineering Document Preparation System (AEDPS).

1.2 Purpose. This military standard provides to the design activity or contractor the necessary information for the preparation of a Specification Requirement Sheet (SRS) which will result in the generation of a Military Specification Exception (MSE) by automated data processing.

1.3 Organization. This standard is organized around part categories listed in Table I. All parts are identified as DOD-STD-35 followed by a dash and a sequential number. Each dash-numbered part of this standard is applicable to one or more automated data bases and furnishes instructions to be used when preparing a request for an MSE.

1.3.1 Dash-numbered parts dated prior to January 1977. Refer to Appendix E for instructions on the use of this standard with dash-numbered part published prior to January 1977.

1.4 Over-specifying. Requirements and tests not essential for proper identification, operation, or quality assurance should be omitted. Many non-standard items become cost prohibitive through over-specifying. When requirements and tests in the base document meet desired criteria, additional parameters which are not mandatory shall not be used.

1.5 Tailoring. This standard is imposed in full. Tailoring is accomplished by the proper application based on program life cycle and type designation. The application guide at Appendix F may be used in determining the proper application of this standard.

1.5.1 Method of submitting requirements. The SRS is the preferred vehicle for specifying and submitting requirements for the generation of an MSE. However, the contractor may select one of the other types set forth in paragraph 4.3 of this standard. The type selected, if other than the SRS, must be approved by the Government, placed on the DD Form 1423 and shall be used throughout the contract period.

4. UNDERSTANDING AEDPS

4.1 Concept. The AEDPS is based on the fact that major features and characteristics of most items are specified by an existing military specification. Generally, special or unique application requirements call for exceptions to a base document. AEDPS takes advantage of this situation.

4.2 MSE formats. Each DOD-STD-35 dash-numbered part provides the means by which one of two formats may be selected by the requester of a forthcoming MSE. All specification requirements described in this document are applicable to either of the formats selected (see 5.6.14):

A 6-section format similar to a Military Specification.

A single-section format similar to a Military Specification Sheet.

4.3 Request for MSE. The contractor shall, if the item is of the type contained in DOD-STD-35 and any of its parts, submit data as specified in Appendix G, in one of the following types: (a) Specification Requirements Sheets (SRS), (b) keypunched cards in DOD-STD-35 format, or (c) data depicting requirements which can be satisfied by commercial items and/or vendor-developed items (example, vendor catalog sheets). Upon receipt of the data, the AEDPS computer will search for an equivalent MSE. If an MSE does not exist, the computer will generate an MSE(see Figure 1.).

4.3.1 Subject matter. Subject matter elements (paragraphs, paragraph titles, specification titles, tables, etc.) that will appear in an MSE are stored in the data base. Some of these elements are incomplete when stored and shall be completed by an AEDPS requester. Standard paragraphs have been written that cover many exceptions and that permit a write-in for the completion of statements. These paragraphs are stored in a computer with identifying characteristic codes. By inputting selected codes and characteristic values, the requester can have the computer generate an MSE. The MSE along with its base document, can be used for procurement of the unique part.

4.3.1.1 Characteristic value. A paragraph specifying rated voltage of an item is stored as: THE RATED VOLTAGE SHALL BE ____ VOLTS. The characteristic value (which is the applicable number of volts) shall be supplied on a Specification Requirements Sheet (SRS) to direct the computer to complete the statement in an MSE.

4.3.1.2 Characteristic codes. Codes are used to retrieve stored subject matter elements and the coding system, basically, identifies each stored element with a 4-digit code. Since the 4-digit codes are used to specify item characteristics, they are called characteristic codes.

4.4 Base document. Each computer generated Military Specification Exception (MSE) will contain the following paragraph:

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:23Z
Check the source to verify that this is the current version before use.

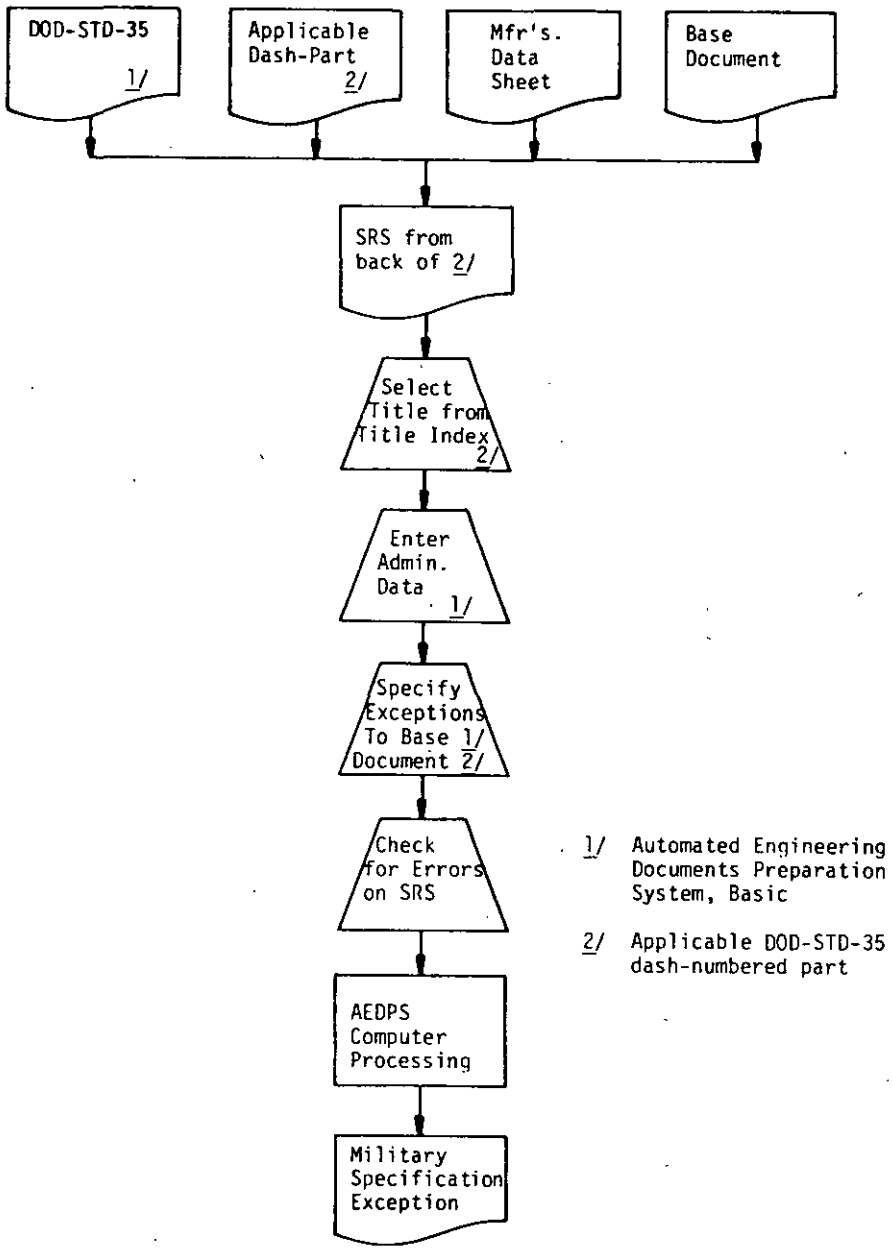

FIGURE 1. Requester simplified flow chart.

Reprinted without change

Source: https://assist.dla.mil -- Downloaded: 202640-26T07:23Z
Check the source to verify that this is the current version before use.

THE COMPLETE REQUIREMENTS FOR PROCURING THE ITEM(S) DESCRIBED HEREIN SHALL BE IN ACCORDANCE WITH THE BASE DOCUMENT(S), (identifier filled in by computer) EXCEPT AS SPECIFIED IN THIS DOCUMENT. IN THE EVENT OF CONFLICT, THIS DOCUMENT SHALL GOVERN.

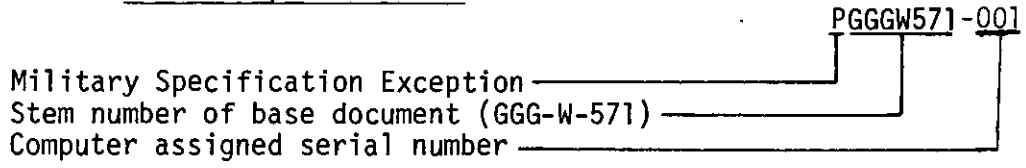

The above paragraph in each MSE, in conjunction with a base document(s), effectively specifies that the total requirements include:

a. All requirements specified in the base document(s) not deleted or modified by the MSE.

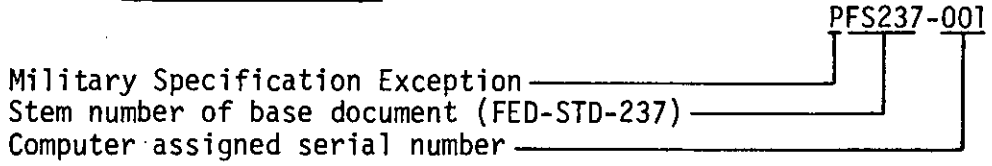

b. All requirements specified in the MSE.

4.5 Document number. Each MSE will be assigned a document number similar to one of the following forms:

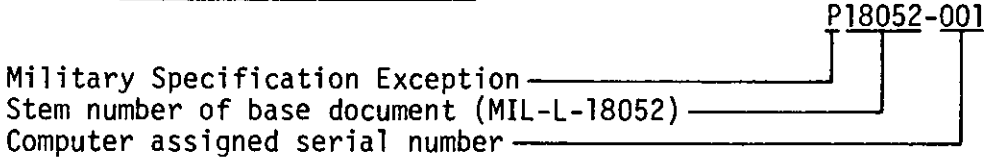

4.5.1 Federal specification.

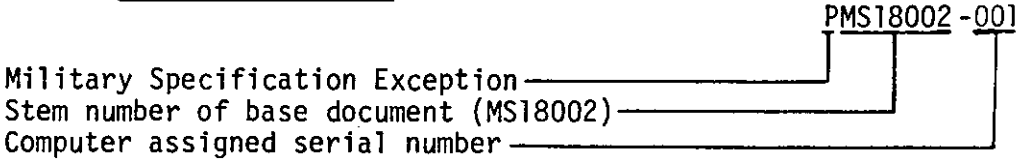

4.5.2 Federal standard.

4.5.3 Military specification.

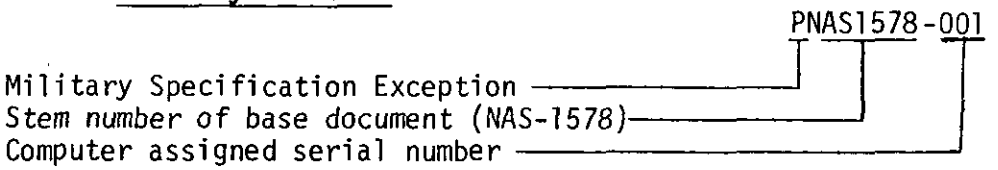

4.5.4 Military standard.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:23Z
Check the source to verify that this is the current version before use.

4.5.5 Industry standard.

4.5.6 Stem number of base document. This part of the document will always be a portion of the base document identifier entered with code 1006 on the SRS.

4.5.7 Serial number. The AEDPS computer has been programmed to assign the serial number. Serial numbers are assigned in numerical order for each base document number.

4.5.8 Revision letter. The revision letter, when used as part of the document number, indicates that the original MSE with the same basic number has been revised.

4.6 Part number. In military documentation the part number is limited to 15 characters. The part number(s) for the item(s) described by an MSE will be the same as the MSE document number plus a dash and appropriate suffix number(s). Revision letters and activity symbols are not included in the part number. However, if the P and stem number exceed seven characters, as shown in 4.5 examples for Federal specification, Military standard and industry standard, the dash between the stem number and the serial number will be dropped in the MSE part number. If the P and stem number are seven or less numbers as shown in 4.5 for Federal standard and Military specification, the dash between stem number and serial number will be retained. Figure 2 depicts six different items with tabulated characteristics in an MSE. Assume the MSE is the third exception document submitted to MIL-C-39003; then the part number for the first item (Suffix No. 01) is P39003-003-01. The characteristics for the Suffix No. 01 part are shown adjacent to the 01 Suffix.

Source: https://assist.dla.mil -- Downloaded: 202610-26T07:23Z
Check the source to verify that this is the current version before use.

TABULATED CHARACTERISTICS TABLE

SUF FIX NO.	CAP MICROFARAD	CAP TOL PLUS PCT	CAP TOL MINUS PCT	RATED VOLTAGE	DISS FAC PCT MAX
01	0.10	10	10	35	3.0
02	0.10	10	10	50	3.0
03	0.68	10	10	35	3.0
04	1.0	5	5	50	3.0
05	1.0	10	10	50	3.0
06	2.7	10	10	25	4.0

FIGURE 2. Tabulated characteristics table depicted in a multi-item MSE.

When the P and stem number of the base document total nine characters only 99 parts may be tabulated per MSE due to the 15 character limitation to military part numbers.

MSE's that use MIL-M-38510 as the base document have a 35 inserted between the P and the stem number because of restrictions in MIL-M-38510. In these MSE part numbers there is no dash between the stem number and the serial number.

The following are examples of base documents and part numbers applicable:

Base Document	Part Number	Remarks	Max Suffix No.
GGG-W-571	PGGGW571001-01	P+7 characters	300
MMM-A-1473	PMMMA1473001-01	P+8 characters	99
F-S-237	PFS237-001-01	P+5 characters	300
MIL-R-55182	P55182-001-01	P+5 characters	300
MS18002	PMS18002001-01	P+7 characters	300
MIL-M-38510	P3538510001-01	P+7 characters	300
ISO R1234	PISOR1234001-01	P+8 characters	99
MIL-T-27	P27-001-01	P+2 characters	300

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:23Z
Check the source to verify that this is the current version before use.

Part number. The part number for the item is P3538510001-01.

FIGURE 2a. Part number statement when using MIL-M-38510 as a base document.

4.6.1 Mating part numbers. Certain items, covered by dash-numbered parts of this standard, required that mating part numbers be identified in an MSE. The capability and instructions for specifying mating part numbers exists in those dash-numbered parts where the need is prevalent (e.g., a protective shell for a rectangular connector, DOD-STD-35-69).

4.7 Request for MSE revision. A request for a revision to an existing MSE may be made in either of the following forms:

a. An original SRS may be submitted, specifying the changes to be made and the number of the MSE to be revised.

b. A marked copy of the MSE to be revised may be submitted. It is necessary to submit only the page(s) containing paragraph(s) to be changed. If a paragraph being changed is printed on more than one page, submit both pages.

c. Marked-up old SRS.

4.8 Processing of MSE revision. The procedure for processing MSE revisions is determined by an analysis of each request and a determination as to which of the following conditions is pertinent.

4.8.1 One known MSE user. If there is only one known user, changes can be made to the MSE by the requester submitting a request specifying the desired changes. The request will be processed and the original MSE document identifier will be modified with the addition of a sequential revision letter and the MSE date will be the computer processing date.

4.8.2 Two or more known users. When there are two or more known users of an MSE, a draft MSE will be created at the next highest revision level and the date will be the computer processing date. A copy of the draft MSE will be forwarded to each of the known users for review.

New page

Check the source to verify that this is the current version before use.

5. HOW TO USE AEDPS

5.1 Introduction. This section provides specific information concerning the completion of an SRS and the subsequent generation of an MSE. Details concerning each automated data base are contained in an applicable dash-numbered part of this standard.

5.2 Specification Requirements Sheets (SRS). All requests for MSE's shall be submitted on SRS's. The SRS forms shall not be reduced. Blank SRS's appear in the back of each DOD-STD-35 dash-numbered part and at the back of this document. It is expected that copies of these forms will be reproduced locally.

5.3 Writing methodology. The characters shown in figure 3 are the only characters that may be used in columns 1 through 80 of an SRS. The use of others may cause an input error to the computer and result in computer rejection.

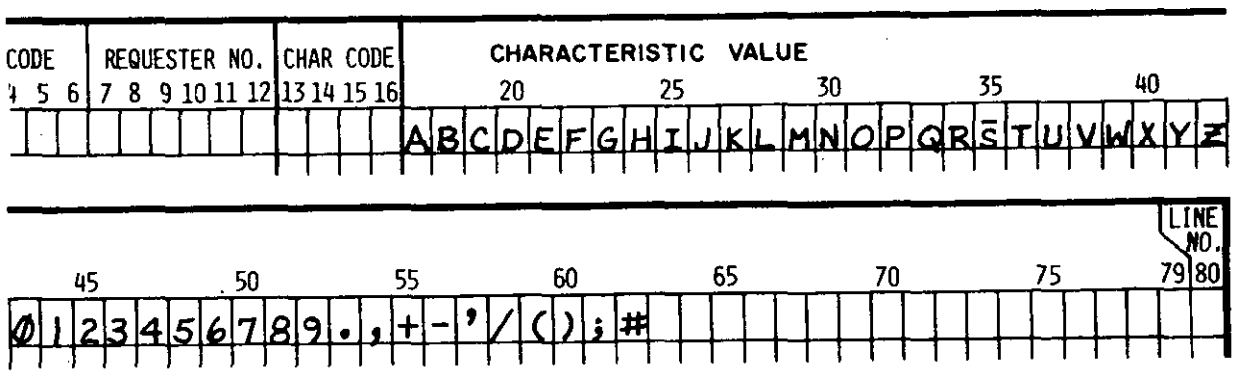

FIGURE 3. Alpha-numeric characters.

In figure 3, a special attention should be given to the following:

a. Pronounced serifs at the top and bottom of the letter I shall be used to distinguish it from the numeral 1.

b. The numeral 1 shall be written directly vertical to distinguish it from "/".

c. A diagonal line through the numeral zero (Ø) shall be used to distinguish it from the letter O.

d. Each letter in a Roman numeral shall require an SRS column (e.g., II requires two columns; III requires three columns; IV requires two columns).

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:23Z
Check the source to verify that this is the current version before use.

e. A horizontal line through the letter Z (Z̶) shall be used to distinguish it from the numeral 2.

f. The pound sign # indicates the end of a characteristic value and shall not be used as any other part of a characteristic value.

g. A horizontal line above the letter S ($\bar{S}$) shall be used to distinguish it from the numeral 5.

5.3.1 Abbreviations. Abbreviations from MIL-STD-12 should be used. The only other abbreviations permitted shall be those in common usage and not subject to misrepresentation.

5.3.2 Tolerance. Plus or minus (tolerance) values shall be entered on the SRS as specified in figure 4.

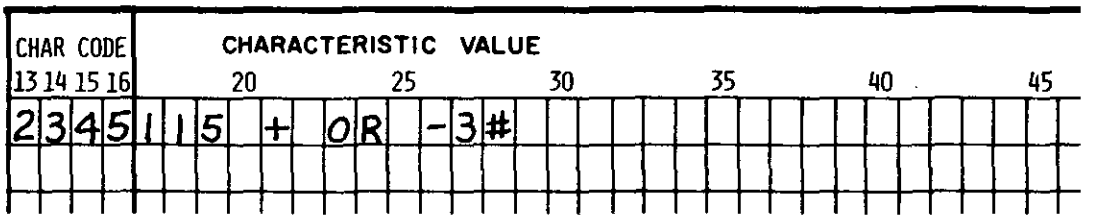

FIGURE 4. Example of tolerance characteristic value.

5.3.3 Symbols. The printer used with AEDPS prints only upper case characters. Metric symbols and symbols used as decimal multipliers pose a special problem. When the letter "m" is used to denote the prefix "milli", the printer will print an upper case "M" which denotes the prefix "mega". Therefore, greek letter symbols shall be not used as prefixes and prefixes shall be spelled out (see figure 5).

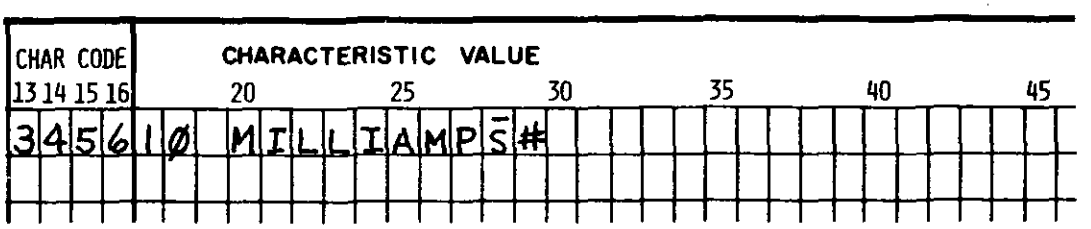

FIGURE 5. Example of prefixes used as decimal multipliers.

Reprinted without change

Source: https://assist.dla.mil -- Downloaded: 202640-26T07:23Z
Check the source to verify that this is the current version before use.

5.6.12 System application. The system application shall be entered on the SRS with code 1008 (see figure 19).

5.6.13 Government design activity FSCM. The government design activity FSCM shall be entered on the SRS with code 6369 (see figure 19).

5.6.14 Format. The selection of format style for the requested MSE is determined by the use of either code 0700 or code 0800 entered with an "X" on the SRS.

5.6.14.1 Six-section MSE format. A 6-section MSE format, resulting from the use of code 0700 and an "X", appears similar to the format of a 6-section Military Specification (see Appendix B).

5.6.14.2 Single-section MSE format. A single-section MSE format, resulting from the use of code 0800 and an "X", appears similar to the format of the Military Specification Sheet (see Appendix C). Use codes from the KCI which will result in differences between the base document and the forthcoming MSE.

5.7 Units of measure. To specify unit of measure, inch-pound units (U.S.) and the International System of Units (SI) are provided. If an item is designed in inch-pound units, the only units of measure that may appear in the MSE are inch-pound. If an item is designed in SI, the only units of measure that may appear in the MSE are SI. Both units of measure cannot appear in the same MSE. Consult DOD-STD-1476 for guidance in the application of inch-pounds and SI units of measure. For guidance in the use of SI unit of measure refer to ASTME380.

Code 6941 entered on the SRS with an "X" will cause the following statement to print in the MSE:

UNIT OF MEASURE. ALL UNITS OF MEASURE ARE IN INCH-POUND UNITS (U.S.) OR DEGREES UNLESS OTHERWISE SPECIFIED.

Code 6942 entered on the SRS with an "X" will cause the following statement to print in the MSE:

UNIT OF MEASURE. ALL UNITS OF MEASURE ARE IN INTERNATIONAL SYSTEM OF UNITS (SI) OR DEGREES UNLESS OTHERWISE SPECIFIED.

5.8 Specification control MSE. When the requester desires to specify the MSE as a specification control document, code 6874 and an "X" entered on the SRS will cause a specification control statement (see figure 21) to appear in the forthcoming MSE.

Source: https://assist.dla.mil -- Downloaded: 202640-26T07:23Z
Check the source to verify that this is the currentversion before use.

SOURCE(S).
THE FOLLOWING SUGGESTED SOURCE(S) SHOWN WITH THEIR PART NUMBER(S) HAVE BEEN KNOWN TO MEET THE REQUIREMENT(S) OF THIS DOCUMENT. IDENTIFICATION OF THE "SUGGESTED SOURCE(S) OF SUPPLY" HEREIN IS NOT TO BE CONSTRUED AS A GUARANTEE OF PRESENT OR CONTINUED AVAILABILITY AS A SOURCE OF SUPPLY FOR THE ITEM(S).

FIGURE 21. Example of specification control statement.

5.9 Source control MSE. When the requirement exists for a source control document, code 6873 and an "X" entered on the SRS will cause a source control statement (see figure 22) to appear in the forthcoming MSE.

SOURCE(S).
THE FOLLOWING SOURCE(S) SHOWN WITH THE PART NUMBER(S) IS/ARE THE ONLY APPROVED SOURCE FOR THE ITEM(S) DESCRIBED BY THIS DOCUMENT. IDENTIFICATION OF THE APPROVED SOURCE(S) HEREIN IS NOT TO BE CONSTRUED AS A GUARANTEE OF PRESENT OR CONTINUED AVAILABILITY AS A SOURCE OF SUPPLY FOR THE ITEM DESCRIBED.

FIGURE 22. Example of source control statement.

5.10 Procurement source(s). To specify sources of supply, the Source Table, Table V, is provided in Appendix A. It is mandatory that code 6873 (see 5.9) or 6874 (see 5.8) be used to specify that the MSE is source or specification control. Table V is available to list a maximum of six approved vendors for a single-item MSE or to list a maximum of 300 different items, each with a maximum of six vendors, for a multi-item MSE. The codes relative to suffix number one are the only codes that may be used to enter sources for a single-item MSE. Refer to paragraph 5.3.9 for a general explanation in the generation of tables.

5.11 Aperture cards. A request for an aperture card deck of the MSE may be obtained by entering on the SRS, an "X" in column 17 on the same line as characteristic code 0107.

5.12 Revision of existing MSE. When a revision to an existing MSE is being requested, the MSE document identifier shall be entered on the SRS on the same line as characteristic code 0108.

5.13 Configuration. Most dash-numbered parts of this standard contain applicable illustrations of items covered therein. The use of an illustration in an MSE is advised to more accurately describe the item(s) covered by the MSE.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:23Z
Check the source to verify that this is the current version before use.

5.13.1 Illustrations. Code 1009 with an illustration number(s) entered on the SRS (see figures 23 and 23a) will cause the following statement to print in the MSE:

CONFIGURATION, ILLUSTRATION(S). THE CONFIGURATION SHALL BE AS SHOWN IN ILLUSTRATION(S) 016-01-1.

CHAR CODE 13 14 15 16	CHARACTERISTIC VALUE 20 25 30 35 40
1 Ø Ø 9	Ø 1 6 - Ø 1 - 1 #

Figure 23. Example of illustration number entered on SRS.

CHAR CODE 13 14 15 16	CHARACTERISTIC VALUE 20 25 30 35 40
1 Ø Ø 9	Ø 1 6 - Ø 1 - 1 , Ø 1 6 - Ø 1 - 2 #

Figure 23a. Example of more than one illustration number entered on an SRS.

When the applicable dash-numbered part of this standard does not contain an applicable illustration, an illustration will be prepared from data submitted along with the SRS:

a. when a minor change(s) to an existing illustration will provide a suitable illustration, a copy of the existing illustration, with required changes marked thereon, may be submitted with the SRS, or

b. when more than minor change to an existing illustration is required, a drawing or sketch may be submitted with the SRS. An illustration will be prepared. The assigned illustration number and dimensional values will be added to the MSE.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:23Z
Check the source to verify that this is the current version before use.

5.13.2 Dimensions. To specify dimensions on an illustration, the requester must mark-up the illustration from the applicable dash-numbered part with the values desired to replace the legend letters (see figure 26) or, if an illustration does not exist, submit a request for a new illustration with the desired dimensional values shown. If dimensions are tabulated, only those dimensional values that do not change from each part number can appear on the illustration. The dimensional values that are tabulated shall appear on the illustration as legend letters.

FIGURE 24. Deleted

FIGURE 25. Deleted

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:23Z
Check the source to verify that this is the current version before use.

5.13.2.1 Schematics and nondimensioned illustrations. Schematics and other illustrations which do not denote configuration or interface dimensions shall be entered on the SRS with code 4950. Code 4950 will create in the MSE, a reference to the schematics and illustrations under the title "illustrations".

5.14 Materials. To specify materials for an item the Material Table, Table VII, is provided in Appendix A. Table VII should be reproduced, applicable data entered, and attached to the SRS for submittal.

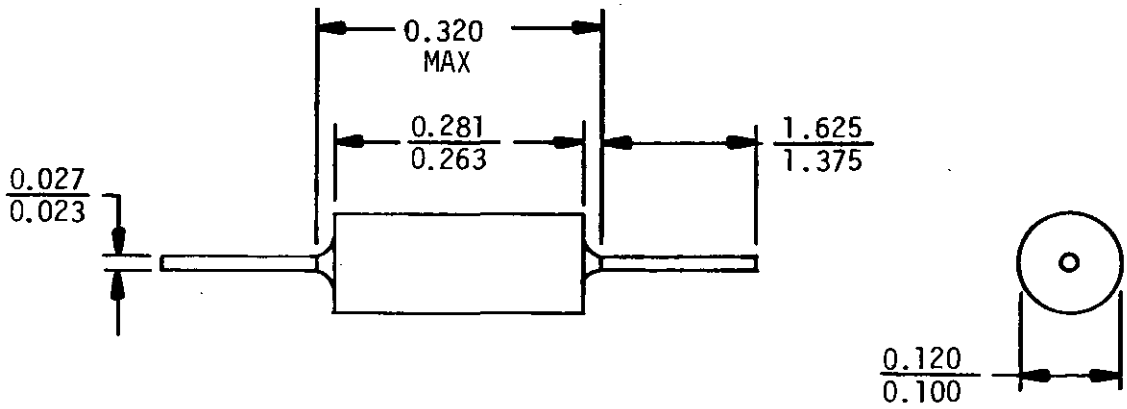

5.14.1 Characteristic value entry. Characteristic values entered on the first line (Ref No. 01, Table VII) will specify the characteristics applicable to the component name entered on the first line. The second line (Ref No. 02) will specify the characteristics applicable to the component name entered on the second line, etc. Refer to paragraph 5.3.9 for a general explanation in the generation of tables.

5.14.2 Material name. To specify the material name for a component of Table VII two methods are provided. Codes from Table VI, Military Standard Item Characteristics Coding Structure (MILSTICCS) contained in Appendix A, should be used to identify a material or, if a MILSTICCS code does not exist, write-in the material name (see figure 27). Only one MILSTICCS material code may be used with each component name of Table VII.

5.14.3 Material Table Notes. Notes A through E are provided to specify a characteristic value that is too lengthy or to further define a characteristic value. To enter the notes of Table VII the words "Note A" is or is a part of the characteristic value entry (see figure 27). The words "Note A" will print in the Materials Table, of the MSE, on the line and under the column heading being further defined. The explanation for the note will print after the table (see figure 28). The same procedure is used for the remaining notes.

5.15 Finishes. To specify finishes for an item the Finish Table, Table IX, and the Military Standard Item Characteristics Coding Structure (MILSTICCS), Table VIII, are provided in Appendix A. Table VIII contains the MILSTICCS finish codes. The procedures for using the Material Table (see 5.14) should be used to complete the Table IX.

Check the source to verify that this is the current version before use.

5.16 Candidates for tabulation. Characteristics that may vary from an MSE suffix number to suffix number are called candidates for tabulation. The candidates for tabulation for each automated data base are listed by characteristic name and code in the applicable dash-numbered part of this standard. Dimensions are candidates for tabulation. Table III of Appendix A lists the codes and column headings for dimensional tabulation. Only the characteristic codes listed as candidates for tabulation shall be used with codes from the Tabulated Characteristics Table, Table IV of Appendix A.

5.16.1 Tabulated Characteristics Table Codes. Codes from the first line of Table IV (e.g., 8AAA, 8BAA, etc.) are used to specify column headings which appear as tabulated characteristics in MSE's. The title of a column is established by entering previously assigned characteristic codes listed under candidates for tabulation in this document and in each dash-numbered part of this standard. The selected code for a column heading is entered with the first code of the first line of Table IV (see figure 29). The column heading codes must be used consecutively. The entries shown in figure 29 depict tabulated characteristics and will appear in an MSE as shown in figure 30. Table IV provides for tabulating 20 characteristics and 300 suffix numbered items within a single MSE.

5.17 Applicable documents. Section 2 will only appear in the six-section format. Section 2 of the MSE may contain a list of all referenced documents within sections 3, 4, and 5 of the MSE. Two methods are utilized to generate the list of applicable documents, automatic and manual.

5.17.1 Automatic. The computer will automatically print referenced document identifiers and titles in section 2 of the MSE when either of the following conditions occur:

a) a code and an "X" is used to specify a complete standard paragraph which contains a referenced document.

b) a code and a written-in document identifier is used for the completion of an incomplete standard paragraph requiring only a document designation (DOC DES).

5.17.2 Manual. The Applicable Documents Table, Table II of Appendix A, may be utilized at the requester's option when codes from the KCI and written-in document identifiers are used to satisfy characteristic values for "PER BASE DOCUMENT EXCEPT ____", Additional Requirements, Additional Marking, Additional Quality Assurance, Additional Packaging, or other written-in values containing referenced documents.

Each written-in document identifier shall be in the current issue of the Department of Defense Index of Specifications and Standards (DODISS).

5.17.3 Applicable Documents Table. The Applicable Documents Table, Table II of Appendix A, applies only to those documents as described in paragraph 5.17.2. Applicable documents to be included in section 2 of the MSE shall be listed under the proper headings. Therefore, documents shall be entered on the SRS in the same sequence under each heading in which they are listed in DODISS.

5.17.3.1 Federal specifications. The document identifier of applicable documents to be listed first under Federal specifications shall be entered on the SRS with the first Federal specification characteristic code, 6015 (see Table II). The document identifier of the second Federal specification shall be entered on the SRS with the second Federal specification characteristic code, 6016. In the same manner, the document identifier of the third, fourth, and fifth Federal specifications shall be entered on the SRS with the third, fourth, and fifth Federal specification characteristic codes.

5.17.3.2 Other applicable documents. The document identifier of other applicable documents shall be entered on the SRS with codes from Table II in the same manner as specified above for Federal Specifications.

5.17.3.3 Revision letters and specification sheet numbers. The document identifiers, entered on the SRS with codes from Table II, shall not include revision letters or specification sheet numbers.

5.17.3.4 Spaces within document identifiers. Although the document identifiers of some documents are normally written with spaces, spaces shall not be used when these identifiers are entered on the SRS (see figure 31) for ASTM E 380.

5.18 Measurement Requirements Table. Values obtained by measurement of key parameters during a test routine are an indication of the quality and reliability of a part. It is often normal for these values to change as the test routine progresses. These are sometimes called end point measurements. Therefore, it is desirable to be able to specify the measurement of different parameters and to modify the value limits at various steps during a test routine. For instance, a measurement may be specified to show that the parameter value:

1) is within the specification tolerance limits.

2) meets a maximum or minimum value other than the specification tolerance limit.

3) meets a maximum change limit from a previous measurement other than the initial measurement.

Characteristic codes of the Measurement Requirements Table, Table XIII of Appendix A, have been provided for this purpose and can be used as an adjunct to an inspection table(s) in an MSE or to specify measurements and requirements at different temperatures, voltages, currents, etc., when special variables are required. When used as an adjunct to an inspection table(s), the test sequence in the table shall be the same as specified in the inspection table (either in the base document or the MSE). None of the codes in Table XIII are mandatory. Data entered with Table XIII (see figure 32), will cause the computer to generate a Measurement Requirement Table in the MSE (see figure 33). Refer to paragraph 5.3.9 for a general explanation in the generation of tables. The table will appear in an MSE after additional quality assurance provisions.

5.19 Nomenclature. The nomenclature used in MSE's to designate requirements, test, and inspections are contained in the data base and do not always agree with the nomenclature used in the base document. For example, the base document may contain provisions for a "Preproduction Inspection", while the MSE refers to this inspection as "First Article Inspection". The Nomenclature Table, Table XXIX of Appendix A, may be used to resolve this difference. Code 5460 with the words "Preproduction Inspection" entered, and Code 5560 with the words "First Article Inspection" entered, will specify that all exceptions listed under First Article Inspection in the MSE, shall apply as Preproduction Inspection in the base document. Additional changes may be made in the same manner.

5.20 Additional write-in characteristics. Provisions are available for entering on the SRS, additional write-ins. It shall be remembered that a characteristic value for a characteristic name cannot exceed 189 characters, including punctuation and spaces. However, additional space may be obtained by adding two or more consecutive characteristic codes and their related characteristic values (e.g., code 7001 added to code 7002 will per-

5.22.2 KCI characteristic name punctuation. KCI characteristic names are punctuated four ways; those with a period at the end, those with a unit of measure in parentheses at the end, those with a colon at the end, and those with an underline at the end. The period or a colon indicates an "X" is the required SRS value entry. A parenthetical unit of measure indicates either a numeric value, an alpha character, an illustration number, or a document designation as the required SRS characteristic value entry. An underline indicates that a standard paragraph shall be completed by entering the standard paragraph related code from the CHAR CODE column and additional words, up to 189 characters, necessary to complete the standard paragraph (see figure 35).

CHAR CODE	STANDARD PARAGRAPH
5673	NONCOMPLIANCE. IF A SAMPLE FAILS TO PASS THE GROUP C INSPECTION, THE SUPPLIER SHALL TAKE CORRECTIVE ACTION ON THE MATERIALS OR PROCESSES, OR BOTH, AS WARRANTED. ALL UNITS OF PRODUCT WHICH CAN BE CORRECTED AND WHICH WERE MANUFACTURED UNDER ESSENTIALLY THE SAME CONDITIONS WITH ESSENTIALLY THE SAME MATERIALS, PROCESSES, ETC., AND WHICH ARE CONSIDERED SUBJECT TO THE SAME FAILURE SHALL BE ALSO CORRECTED. ACCEPTANCE OF THE PRODUCT SHALL BE DISCONTINUED UNTIL CORRECTIVE ACTION, ACCEPTABLE TO THE GOVERNMENT, HAS BEEN TAKEN. AFTER THE CORRECTIVE ACTION HAS BEEN TAKEN, GROUP C INSPECTION SHALL BE REPEATED ON ADDITIONAL SAMPLE UNITS (ALL INSPECTIONS, OR THE INSPECTION WHICH THE ORIGINAL SAMPLE FAILED, AT THE OPTION OF THE GOVERNMENT). GROUPS A AND B INSPECTION MAY BE REINSTITUTED; HOWEVER, FINAL ACCEPTANCE SHALL BE WITHHELD UNTIL THE GROUP C REINSPECTION HAS SHOWN THAT THE CORRECTIVE ACTION WAS SUCCESSFUL. IN THE EVENT OF FAILURE AFTER REINSPECTION, INFORMATION CONCERNING THE FAILURE AND CORRECTIVE ACTION TAKEN SHALL BE FURNISHED TO THE COGNIZANT INSPECTION ACTIVITY AND THE QUALIFYING ACTIVITY.
5675	NONCOMPLIANCE. IF A SAMPLE FAILS TO PASS THE GROUP C INSPECTION THE SUPPLIER SHALL 5675.
7828	DISPOSITION OF SAMPLE UNITS. SAMPLE UNITS THAT HAVE BEEN SUBJECTED TO THE GROUP C INSPECTION SHALL NOT BE DELIVERED ON THE CONTRACT OR ORDER.

P39017-999
19 APRIL 1979

MILITARY SPECIFICATION EXCEPTION

RESISTOR, FIXED, FILM

1. SCOPE.

1.1 SCOPE. THIS DOCUMENT COVERS THE DETAILED REQUIREMENTS FOR FIXED, FILM RESISTOR.

1.2 PART NUMBER. THE PART NUMBER FOR THE ITEMS IS P39017-999, PLUS THE SUFFIX NUMBER FROM THE TABULATED CHARACTERISTIC TABLE. REVISION AND ACTIVITY SYMBOLS ARE NOT INCLUDED IN THE PART NUMBER.

1.2.1 UNIT OF MEASURE. ALL UNITS OF MEASURE ARE IN INCH-POUND UNITS (U.S.) OR DEGREES UNLESS OTHERWISE SPECIFIED.

1.3 ELECTRICAL RATINGS.

1.3.1 POWER RATING.

1.3.1.1 THE POWER RATING SHALL BE 0.25 WATT(S).

1.3.1.2 THE POWER RATING AMBIENT TEMPERATURE SHALL BE 70 DEGREES CELSIUS.

1.3.1.3 THE POWER SHALL DERATE TO ZERO WATT AT 150 DEGREES CELSIUS.

1.3.2 VOLTAGE RATING. THE MAXIMUM CONTINUOUS WORKING VOLTAGE SHALL BE 1000 VOLT(S) DC.

2. APPLICABLE DOCUMENTS.

2.1 ISSUES OF DOCUMENTS. THE FOLLOWING DOCUMENTS, OF THE ISSUE IN EFFECT ON THE DATE OF INVITATION FOR BIDS OR REQUEST FOR PROPOSAL, FORM A PART OF THIS DOCUMENT TO THE EXTENT SPECIFIED HEREIN.

SPECIFICATIONS

MILITARY

MIL-R-39017	RESISTORS, FIXED, FILM, (INSULATED) ESTABLISHED RELIABILITY GENERAL SPECIFICATION FOR

STANDARDS

MILITARY

MIL-STD-202	TEST METHODS FOR ELECTRONIC AND ELECTRICAL PARTS

(COPIES OF SPECIFICATIONS, STANDARDS, DRAWINGS, AND PUBLICATIONS REQUIRED BY SUPPLIERS IN CONNECTION WITH SPECIFIC PROCUREMENT FUNCTIONS SHOULD BE OBTAINED FROM THE PROCURING ACTIVITY OR AS DIRECTED BY THE CONTRACTING OFFICER.)

3. REQUIREMENTS.

3.1 BASE DOCUMENT. THE COMPLETE REQUIREMENTS FOR PROCURING THE ITEM(S) DESCRIBED HEREIN SHALL BE IN ACCORDANCE WITH THE BASE DOCUMENT, MIL-R-39017/1, EXCEPT AS SPECIFIED IN THIS DOCUMENT. IN THE EVENT OF CONFLICT, THIS DOCUMENT SHALL GOVERN.

3.1.1 QUALIFICATION. ITEMS FURNISHED UNDER THIS DOCUMENT SHALL BE SUPPLIED BY MANUFACTURERS WHO ARE QUALIFIED TO SUPPLY ITEMS SPECIFIED IN THE BASE DOCUMENT.

3.2 CONFIGURATION.

3.2.1 CONFIGURATION ILLUSTRATION(S). THE CONFIGURATION SHALL BE AS SHOWN IN ILLUSTRATION(S) 001-01-1.

3.2.1.1 ALL DIMENSIONS, UNLESS OTHERWISE SPECIFIED, SHALL BE IN INCHES OR DEGREES.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:23Z
Check the source to verify that this is the current version before use.

3.2.2

TABULATED CHARACTERISTIC TABLE

SUF FIX NO.	RESISTANCE (MEGOHMS)
01	0.301
02	3.010

3.3 RESISTANCE TOLERANCE. THE TOLERANCE SHALL BE WITHIN PLUS 1.0 AND MINUS 1.0 PERCENT.

3.4 ADDITIONAL REQUIREMENTS.

(A) RESISTOR LEADS SHALL BE CONCENTRIC TO RESISTOR BODY WITHIN 9.016 DIAMETER.

3.5 PART MARKING. PART IDENTIFICATION MARKING SHALL BE IN ACCORDANCE WITH MIL-STD-1285, USING THE PART NUMBER AS THE IDENTIFYING NUMBER.

4. QUALITY ASSURANCE PROVISIONS.

4.1 QUALITY ASSURANCE PROVISIONS. THE QUALITY ASSURANCE PROVISIONS SHALL BE IN ACCORDANCE WTIH MIL-R-39017/1, AND AS SPECIFIED HEREIN. IN THE EVENT OF CONFLICT, THIS DOCUMENT SHALL GOVERN.

4.2 QUALIFICATION INSPECTION.

4.2.1 QUALIFICATION INSPECTION. QUALIFICATION INSPECTION IS NOT REQUIRED FOR ITEMS FURNISHED UNDER THIS DOCUMENT.

4.3 QUALITY CONFORMANCE INSPECTION. THE QUALITY CONFORMANCE INSPECTION SHALL BE AS SPECIFIED IN THE BASE DOCUMENT, EXCEPT AS SPECIFIED HEREIN.

4.3.1 GROUP B INSPECTION. GROUP B INSPECTION SHALL BE PERFORMED AS SPECIFIED IN THE BASE DOCUMENT, EXCEPT AS SPECIFIED HEREIN.

4.3.1.1 GROUP B INSPECTION TABLE. THE GROUP B INSPECTION TABLE SHALL BE AS SPECIFIED IN THE BASE DOCUMENT, SUBJECT TO THE FOLLOWING MODIFICATIONS.

Check the source to verify that this is the currentversion before use.

4.3.1.1 (CONTINUED)

MODIFICATION TO GROUP B INSPECTION TABLE

TEST TITLE	NATURE OF MODIFICATION	TITLE OF PRECEDING TEST
DIELECTRIC WITHSTANDING VOLTAGE AT REDUCED BAROMETRIC PRESSURE	ADD	DIELECTRIC WITHSTANDING VOLTAGE AT SEA LEVEL

4.3.2 GROUP C INSPECTION. GROUP C INSPECTION SHALL BE PERFORMED AS SPECIFIED IN THE BASE DOCUMENT, EXCEPT AS SPECIFIED HEREIN.

4.3.2.1 GROUP C INSPECTION TABLE. THE GROUP C INSPECTION TABLE SHALL BE AS SPECIFIED IN THE BASE DOCUMENT, SUBJECT TO THE FOLLOWING MODIFICATIONS.

MODIFICATION TO GROUP C INSPECTION TABLE

TEST TITLE	NATURE OF MODIFICATION
LIFE	DELETE
QUARTERLY TESTS	DELETE
SEMIANNUAL TESTS	DELETE

4.4 METHODS OF INSPECTION.

4.4.1 TEST METHODS. EXAMINATION AND TESTS SHALL BE PERFORMED IN ACCORDANCE WITH THE BASE DOCUMENT, AND AS SPECIFIED HEREIN. OTHER TEST METHODS MAY BE SUBSTITUTED UPON WRITTEN APPROVAL BY THE PROCURING ACTIVITY, PROVIDED THE SUPPLIER HAS DEMONSTRATED THAT THE RESULTS OBTAINED PROPERLY CORRELATE WITH THOSE OBTAINED USING THE METHODS SPECIFIED. THE SUPPLIER MUST ALSO DEMONSTRATE THAT SUCH SUBSTITUTION DOES NOT RELAX THE REQUIREMENTS OF THIS DOCUMENT.

4.5 RELIABILITY SCREENING (BURN-IN, AGEING, CONDITIONING, STABILIZATION, LOAD LIFE, OVERLOAD). TESTING SHALL BE PERFORMED IN ACCORDANCE WITH THE BASE DOCUMENT, EXCEPT POWER CONDITIONING VOLTAGE SHALL BE 1000 VOLTS DC.

MILITARY SPECIFICATION EXCEPTION SHEET

RESISTOR, FIXED, FILM

THE COMPLETE REQUIREMENT(S) FOR PROCURING THE ITEMS DESCRIBED HEREIN SHALL BE IN ACCORDANCE WITH THE BASE DOCUMENT, MIL-R-39017/1, EXCEPT AS SPECIFIED IN THIS DOCUMENT. IN THE EVENT OF CONFLICT, THIS DOCUMENT SHALL GOVERN.

PART NUMBER. THE PART NUMBER FOR THE ITEMS IS P39017-999, PLUS THE SUFFIX NUMBER FROM THE TABULATED CHARACTERISTIC TABLE. REVISION AND ACTIVITY SYMBOLS ARE NOT INCLUDED IN THE PART NUMBER.

UNIT OF MEASURE. ALL UNITS OF MEASURE ARE IN INCH-POUND UNITS (U.S.) OR DEGREES UNLESS OTHERWISE SPECIFIED.

ELECTRICAL RATINGS.

POWER RATING.

THE POWER RATING SHALL BE 0.25 WATT(S).

THE POWER RATING AMBIENT TEMPERATURE SHALL BE 70 DEGREES CELSIUS.

THE POWER SHALL DERATE TO ZERO WATT AT 150 DEGREES CELSIUS.

VOLTAGE RATING. THE MAXIMUM CONTINUOUS WORKING VOLTAGE SHALL BE 1000 VOLT(S) DC.

EXCEPTIONS.

QUALIFICATION. ITEMS FURNISHED UNDER THIS DOCUMENT SHALL BE SUPPLIED BY MANUFACTURERS WHO ARE QUALIFIED TO SUPPLY ITEMS SPECIFIED IN THE BASE DOCUMENT.

CONFIGURATION.

CONFIGURATION ILLUSTRATION(S). THE CONFIGURATION SHALL BE AS SHOWN IN ILLUSTRATION(S) 001-01-1.

ALL DIMENSIONS, UNLESS OTHERWISE SPECIFIED, SHALL BE IN INCHES OR DEGREES.

Source: https://assist.dla.mil -- Downloaded: 2026-10-26T07:23Z
Check the source to verify that this is the current version before use.

P39017-999

TABULATED CHARACTERISTIC TABLE

SUF FIX NO.	RESISTANCE (MEGOHMS)
01	0.301
02	3.010

RESISTANCE TOLERANCE. THE TOLERANCE SHALL BE WITHIN PLUS 1.0 AND MINUS 1.0 PERCENT.

MARKING.

PART MARKING. PART IDENTIFICATION MARKING SHALL BE IN ACCORDANCE WITH MIL-STD-1285, USING THE PART NUMBER AS THE IDENTIFYING NUMBER.

ADDITIONAL REQUIREMENTS.

RESISTOR LEADS SHALL BE CONCENTRIC TO RESISTOR BODY WITHIN 0.016 DIAMETER.

QUALIFICATION INSPECTION.

QUALIFICATION INSPECTION. QUALIFICATION INSPECTION IS NOT REQUIRED FOR ITEMS FURNISHED UNDER THIS DOCUMENT.

QUALITY CONFORMANCE INSPECTION. THE QUALITY CONFORMANCE INSPECTION SHALL BE AS SPECIFIED IN THE BASE DOCUMENT, EXCEPT AS SPECIFIED HEREIN.

GROUP B INSPECTION. GROUP B INSPECTION SHALL BE PERFORMED AS SPECIFIED IN THE BASE DOCUMENT, EXCEPT AS SPECIFIED HEREIN.

GROUP B INSPECTION TABLE. THE GROUP B INSPECTION TABLE SHALL BE AS SPECIFIED IN THE BASE DOCUMENT, SUBJECT TO THE FOLLOWING MODIFICATIONS.

Check the source to verify that this is the current version before use.

P39017-999

MODIFICATION TO GROUP B INSPECTION TABLE

TEST TITLE	NATURE OF MODIFICATION	TITLE OF PRECEDING TEST
DIELECTRIC WITHSTANDING VOLTAGE AT REDUCED BAROMETRIC PRESSURE	ADD	DIELECTRIC WITHSTANDING VOLTAGE AT SEA LEVEL

GROUP C INSPECTION. GROUP C INSPECTION SHALL BE PERFORMED AS SPECIFIED IN THE BASE DOCUMENT, EXCEPT AS SPECIFIED HEREIN.

GROUP C INSPECTION TABLE. THE GROUP C INSPECTION TABLE SHALL BE AS SPECIFIED IN THE BASE DOCUMENT, SUBJECT TO THE FOLLOWING MODIFICATIONS.

MODIFICATION TO GROUP C INSPECTION TABLE

TEST TITLE	NATURE OF MODIFICATION
LIFE	DELETE
QUARTERLY TESTS	DELETE
SEMIANNUAL TESTS	DELETE

METHODS OF INSPECTION.

TEST METHODS. EXAMINATION AND TESTS SHALL BE PERFORMED IN ACCORDANCE WITH THE BASE DOCUMENT, AND AS SPECIFIED HEREIN. OTHER TEST METHODS MAY BE SUBSTITUTED UPON WRITTEN APPROVAL BY THE PROCURING ACTIVITY, PROVIDED THE SUPPLIER HAS DEMONSTRATED THAT THE RESULTS OBTAINED PROPERLY CORRELATE WITH THOSE OBTAINED USING THE METHODS SPECIFIED. THE SUPPLIER MUST ALSO DEMONSTRATE THAT SUCH SUBSTITUTION DOES NOT RELAX THE REQUIREMENTS OF THIS DOCUMENT.

RELIABILITY SCREENING (BURN-IN, AGEING, CONDITIONING, STABILIZATION, LOAD LIFE, OVERLOAD). TESTING SHALL BE PERFORMED IN ACCORDANCE WITH THE BASE DOCUMENT, EXCEPT POWER CONDITIONING VOLTAGE SHALL BE 1000 VOLTS DC.

P39017-999

DIELECTRIC WITHSTANDING VOLTAGE AT REDUCED BAROMETRIC PRESSURE. TESTING SHALL BE PERFORMED IN ACCORDANCE WITH METHOD 301 OF MIL-STD-202.

ALTITUDE SHALL BE IN ACCORDANCE WITH TEST CONDITION LETTER D OF METHOD 105 OF MIL-STD-202.

TEST VOLTAGE SHALL BE 1000 VOLTS, DC.

DIELECTRIC WITHSTANDING VOLTAGE AT SEA LEVEL. TESTING SHALL BE PERFORMED IN ACCORDANCE WITH METHOD 301 OF MIL-STD-202.

TEST VOLTAGE SHALL BE 2000 VOLTS, DC.

INSULATION RESISTANCE. TESTING SHALL BE PERFORMED IN ACCORDANCE WITH METHOD 302 OF MIL-STD-202.

TEST CONDITION LETTER C SHALL APPLY.

NOTES.

CONTRACT NUMBER OR
OFFICE SYMBOL..... DAAK99-99-C-9999.

SYSTEM APPLICATION..... EXAMPLE FOR BASIC.

USER FSCM..... 30499.

GOVERNMENT DESIGN ACTIVITY FSCM..... 55717.

Check the source to verify that this is the current version before use.

30.2 Obsolete codes. The following codes are obsolete and no longer in the data base for use:

a. Item name code; 1007
b. Codes which are used to specify inspection, tests or requirements per the 1006 (base) document (specify only exceptions in MSE).
c. Single item source table; codes 5001 through 5012
d. Several codes formerly in inspections. Use only those codes shown on the flow charts in section 6.

40. System changes.

40.1 Applicable documents. Changes to the computer program have changed the requirements for the use of the Applicable Documents Table, Table II. The use of Table II for entering documents referenced in sections 3, 4, and 5 of an MSE is now optional (see 5.17).

40.2 Table values. Tables in dash-numbered parts prior to 1975, required that three dashes (---) be used for unknown values. System changes now prohibit the use of three dashes.

40.3 MSE formats. AEDPS now has the capability to produce MSE's in two formats; six-section and single-section (see 5.6.14). To illustrate the two formats an MSE, P39017-999, has been prepared.

40.3.1 Six-section MSE. Appendix B is an example of a six-section MSE. This format is a result of entering code 0700 and an "X" on the SRS.

40.3.2 Single-section MSE. Appendix C is an example of a single-section MSE. This format is a result of entering code 0800 and an "X" on the SRS.

40.4 Specification Requirements List (SRL). The KCI of this document (see section 6) serves the same purpose as the Specification Requirements List (SRL).

40.4.1 SRL and KCI comparison. Example 62 of MIL-STD-35C(MI) and figure 34 of this document are included for comparison. The characteristic name and code designations of the KCI are the same as those of the SRL. The conventions for indentation, placement and use of the "*", are the same (see enclosure C-1 and C-2).

Note that the SRL heading "REF. PARA." (see enclosure C-1) and the paragraph numbers do not appear on the KCI (see enclosure C-2). Since the format in which the paragraph keywords and code appear on a left-hand page opposite the standard paragraphs, it is obvious what SRS entries are required (see 5.22.2). Instructions for use of the KCI apply also the use of an SRL (see 5.22). Note

SPECIFICATION REQUIREMENTS LIST (SRL)

REF. PARA.	CHARACTERISTIC NAME	CODE
5.6	*Applicable Documents — This specification requirement shall always be supplied. (Observe "*" placement)	Table B
5.7	Materials — These specification requirements are optional.	Table C
5.8	Finish — These specification requirements are optional.	Table D
5.9	Storage Temperature Range — These specification requirements are optional.	
	Low Temperature (deg C)	0000
	*High Temperature (deg C)	0000
	These two specification requirements shall be supplied when optional underlined specification requirement above is required. (Observe "*" placement)	
5.10	Humidity	
	(Select one test method)	
	Test per 1006 document	0000
	Test per 1006 document except _____.	0000
	Test per MIL-STD-202, Method 103	
	*Test condition letter	0000
	It is mandatory to specify this value when test is to be detailed. (Observe "*" placement)	
	Duration of application of polarizing voltage (hours)	0000
	It is optional to specify this value.

APPENDIX F

THE APPLICABILITY MATRIX TABLE

10.0 SCOPE

10.1 This appendix establishes criteria for the partial and incremental application of the requirements of this specification.

20.0 APPLICABLE DOCUMENTS

20.1 The following documents form a part of this specification to the extent specified herein:

STANDARDS

Military

MIL-STD-280	Definition of Item Levels, Item Exchangeability, Models, and Related Terms

OTHER PUBLICATIONS

DOD Directive 5000.1 Acquisition of Major Defense Systems

30.0 DESCRIPTION AND USE

30.1 The field of the applicability matrix table utilizes coded symbols to describe the relative importance of the specific requirement during the phase and for the type of program indicated by the location of the symbol. This table should be used as a guide only.

30.2 The left hand column of the matrix table contains alpha numeric references to each of the requirements in the specification or standard. The references will be at the numbered paragraph level and sentence level where necessary.

30.3 The top of the matrix provides a description for grouping of requirements.

30.3.1 The acquisition phase designators in the first line establish a basis for determining applicability to each phase of development or production as based on DOD Directive 5000.1, i.e., Program Initiation, Demonstration and Validation, Full Scale Development, and Production.

30.3.2 The second line contains hardware model level descriptions, in accordance with the definitions of MIL-STD-280, for each acquisition phase.

30.3.3 The third line contains program type designators. (See para. 40.1)

40.0 APPLICATION

40.1 Program Type Designators

Type I - A program whose objective is to acquire, or eventually acquire, a fully implemented production quantity of complex equipments.

Type II - A program whose objective is to acquire, or eventually acquire, a fully implemented production quantity of noncomplex equipment and parts.

Type III - A program whose objective is to acquire, or eventually acquire, a small quantity of noncomplex equipment(s).

Type IV - A program whose objective is to acquire, or eventually acquire, a small quantity of complex equipment(s)

40.2 Relative Importance Symbol Definitions

NR - Not Recommended

A - Applicable

D - Deferred to later phase

NA - Not applicable

APPENDIX G

DATA

10.1 This standard requires the delivery of data. The types of deliverable data products are:

Specification Requirements Sheets (SRS)
Keypunch Cards
Complete Vendor data

The task requirement for the deliverable data is paragraph 4.3 of the basic DOD-STD 35.

10.2 The Government and Contractor will agree upon one of the above types. Delivery will then be in accordance with Data Item Description DI-E-1133 and the DD Form 1423.
