COMMERCIAL ITEM DESCRIPTION

SOAP, LAUNDRY (BAR)

The General Services Administration has authorized the use of this commercial item description in lieu of Federal Specification P-S-591.

This commercial item description covers laundry bar soap for use in soft or moderately hard water for hand laundering, hand dishwashing, and general cleaning.

Salient characteristics:

The laundry bar soap shall conform to ASTM D 497-Ordinary Laundry Bar Soap, except that section 4-Basis of Purchase-shall be deleted, and the titer of the mixed fatty acids shall be not lower than 29° C when tested as specified in ASTM D 460, sections 43 and 44.

The issue of ASTM methods in effect on the date of the solicitation shall be used to determine compliance with these requirements.

The average bar weight shall be between 6.75 and 8.25 ounces (see NOTE at the end of this document).

Certification. The contractor shall certify that the product offered meets the salient characteristics of this description and that the product conforms to the producer's own drawings, specifications, standards, and quality assurance practices and is the same product offered for sale in the commercial marketplace. The Government reserves the right to require proof of such conformance prior to first delivery and thereafter as may be otherwise provided for under the provisions of the contract.

Packaging, packing, and marking. The packaging and packing shall be in accordance with normal commercial practice and shall assure acceptance by common carrier and provide product protection during multiple shipments, handling, and storage. The shipping containers shall be in compliance with the National Motor Freight Classification and Uniform Freight Classification. Marking shall be as specified in the contract or order.

ASTM standards are available from the American Society for Testing and Materials, 1916 Race Street, Philadelphia, PA 19103.

Note:

Bid evaluation. Bids shall be evaluated on the basis of price per ounce of soap bar. Bidders shall state the average weight of the soap bars offered and the number of bars in the shipping container. Price per ounce of soap is determined by dividing the price per bar by the average bar weight.

To determine the average bar weight determine the net weight of shipping container and divide by the number of bars in the case.
