MILITARY SPECIFICATION

HOLDER, PATIENT'S BED TRAY CARD

This specification is approved for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification covers a corrosion-resisting steel identification card holder, suitable for use in hospital ward serving kitchens to hold a bed tray card, used as a means of identification for trays and nourishment service.

2. APPLICABLE DOCUMENTS

2.1 Government Documents.

2.1.1 Specifications, standards, and handbooks. The following specifications, standards, and handbooks form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents shall be those listed in the issue of the Department of Defense Index of Specifications and Standards (DoDISS) and supplement thereto, cited in the solicitation (see 6.2).

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Headquarters, Defense Personnel Support Center, ATTN: Directorate of Medical Materiel, DPSC-MST, 2800 South 20th Street, Philadelphia, PA 19101, by using the self-addressed Standardization Document Improvement Proposal, (DD Form 1426) appearing at the end of this document or by letter.

AMSC/NA FSC 6530

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

AMERICAN IRON AND STEEL INSTITUTE (AISI)

Steel Products Manual, Stainless and Heat Resisting Steel

(Application for copies should be addressed to American Iron and Steel Institute, 150 East 42nd Street, New York, NY 10017).

(Non-Government standards and other publications are normally available from the organizations that prepare or distribute the documents. These documents also may be available in or through libraries or other informational services.)

2.3 Order of precedence. In the event of a conflict between the text of this document and the references cited herein (except for related associated detail specifications, specification sheets, or MS standards), the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 Material. The material used in the fabrication of the holder shall be American Iron and Steel Institute (AISI) type 302 or 304 corrosion-resisting steel.

3.2 Design and construction. The holder shall be constructed in accordance with figure 1 and this specification. The holder shall be made of a single piece of 0.025 inch thick (No. 24 standard gage) corrosion-resisting steel.

3.2.1 Finish. All surfaces of the holder shall have a No. 4 commercial finish. The finished holder shall be clean, free of oil, grease, buffing compound, and other foreign matter.

3.3 Identification marking. Each holder shall have impressed thereon the following information:

Stock number
Manufacturer's name or registered trademark
Contract or order number
U.S.

Marking secured by adhesives shall not be used.

3.4 Workmanship. The holders shall be free of burrs, sharp edges, and die marks. The holders shall be free from defects which detract from their appearance or which may affect their serviceability.

4. QUALITY ASSURANCE PROVISIONS

4.1. Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements (examinations and tests) as specified herein. Except as otherwise specified in the contract or purchase order, the contractor may use his own or any other facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the Government. The Government reserves the right to perform any of the inspections set forth in this specification where such inspections are deemed necessary to ensure supplies and services conform to prescribed requirements.

4.1.1. Responsibility for compliance. All items shall meet all requirements of sections 3 and 5. The inspection set forth in this specification shall become a part of the contractor's overall inspection system or quality program. The absence of any inspection requirements in the specification shall not relieve the contractor of the responsibility of ensuring that all products or supplies submitted to the Government for acceptance comply with all requirements of the contract. Sampling inspection, as part of manufacturing operations, is an acceptable practice to ascertain conformance to requirements, however this does not authorize submission of known defective material, either indicated or actual, nor does it commit the Government to accept defective material.

4.1.2 Records. Records of examinations and tests performed by, or for, the contractor shall be maintained by the contractor and made available to the Government, upon the Government's request, at any time, or from time to time, during the performance of the contract, and for a period of 3 years after delivery of the supplies to which such records relate.

4.1.3 Inspection. Inspection, as used in this specification, is defined as both examination (such as visual and auditory investigation without the use of special laboratory appliances or procedures) and testing (determination by technical means of physical and chemical properties) of the item.

Check the source to verify that this is the current version before use.

4.1.4 Certificates of quality. Certificates of quality supplied by the manufacturer of the component or material may be furnished in lieu of actual performance of such testing by the contractor, provided lot identity has been maintained and can be demonstrated to the Government. The certificate shall include the name of the contractor, the contract number, the name of the manufacturer or supplier, the National Stock Number (NSN), the item identification, the name of the component/material, the lot number, the lot size, the sample size, the date of testing, the test method, individual test results, and the specification requirements.

4.2 Sampling.

4.2.1 For examination. Sampling for examination shall be conducted in accordance with MIL-STD-105 and table I. The unit of product for examination purposes shall be one patient's bed tray card holder.

TABLE I. Sampling for examination.

	Inspection level	AQL (percent defective)
For visual examination		
Major defects	II	1.0
Minor defects	II	4.0
For dimensional examination	S-2	2.5

4.2.2 For tests. Sampling for tests shall be conducted in accordance with MIL-STD-105, with an AQL of 2.5 (percent defective) and an inspection level of S-3. The unit of product for test purposes shall be one bed tray card holder.

4.3 Examination. The patient's bed tray card holder shall be examined for defects including, but not limited to, those listed in table II.

4.3.1 Classification of defects. Examination shall be conducted in accordance with the classification of defects listed in table II. Examination shall not be restricted to the classification of possible defects.

Check the source to verify that this is the current version before use.

TABLE II - Classification of defects.

Category	Defects
Major	
101	Holder not made from one piece
102	Holder corners not rounded
103	Finished holder not free of sharp edges and burrs
104	Finish not a No. 4 Commercial
Minor	
201	Identification marking missing, incomplete, or not distinct
202	Holder not clean and free from oil, dirt, chips, excess scratches, or die marks

4.3.2 Dimensional examination. The holders shall b examined for defects in dimensions. Any dimension not within the tolerances specified herein shall be classified as a defect.

4.4 Tests. Tests shall be conducted, as necessary, to determine compliance with specification requirements. Wher feasible, the same sample shall be used for the determination of two or more test characteristics.

4.5 Inspection of packaging. The sampling and inspection of the preservation and interior package marking shall be in accordance with groups A and B quality conformance inspection requirements of MIL-P-116. The sampling and inspection of the packing and marking for shipment and storage shall be in accordance with the quality assurance provisions of the applicable container specification and the marking requirements of MIL-STD-129.

5. PACKAGING

5.1 Preservation. Preservation shall be level A or C, as specified (see 6.2).

5.1.1 Level A.

5.1.1.1 Cleaning and drying. Each holder shall be cleaned and dried in accordance with MIL-P-116.

5.1.1.2 Preservative applications. Preservatives shall not be used.

5.1.1.3 Unit package. Each holder shall be packaged in accordance with MIL-P-116, method IC-1.

5.1.1.4 Intermediate package. Twelve unit packages containing holders shall be packaged in a box conforming to PPP-B-566, PPP-B-636, class domestic or PPP-B-676. Closure shall be as specified in the applicable box specification.

5.1.2 Level C.

5.1.2.1 Unit package. Preservation for holders shall conform to the requirements of MIL-STD-794 for level C.

5.1.2.2 Intermediate package. Twelve intermediate packages (144 units) containing holders shall be packaged in accordance with the requirements of MIL-STD-794 for level C.

5.2 Packing. Packing shall be level A, B or C, as specified (see 6.2).

5.2.1 Level A. Twelve intermediate packages (144 units) containing holders shall be packed in an exterior container designed for a type 2 load and conforming to PPP-B-601, overseas type, PPP-B-621, class 2, or PPP-B-636, class weather-resistant. Closure and strapping shall be as specified in the applicable box specification.

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T20:20Z
Check the source to verify that this is the current version before use.

5.2.1.1 Case liner. Each level A wood box shall be lined with a waterproof case liner conforming to MIL-L-10547. Closure and sealing shall be as specified in the liner specification. Case liner shall not be required for fiberboard boxes. Each fiberboard box shall be waterproofed as specified in PPP-B-636.

5.2.2 Level B. Twelve intermediate packages (144 units) containing holders shall be packed in an exterior container designed for a type 2 load and conforming to PPP-B-601, domestic type, PPP-B-621, class 1, or PPP-B-636, class domestic. Closure shall be as specified in the applicable box specification.

5.2.3 Level C. Twelve intermediate packages (144 units) containing holders shall be packed in accordance with the requirements of MIL-STD-794 for level C.

5.2.4 Packing variation permitted. If the required number of units to be shipped is less than the number of units specified to be overpacked in an exterior container, such units shall be packed in an exterior container of suitable size and design, acceptable to a common carrier, which will insure safe delivery to destination.

5.2.5 Unitized loads. Unitized loads, commensurate with the level of packing specified in the contract or order, shall be used whenever total quantities for shipment to one destination exceed 250 pounds or 20 cubic feet. Loads shall be unitized on pallets conforming to MIL-STD-147. Quantities less than 20 cubic feet need not be unitized. Pallet loads including the pallet shall not exceed 43 inches in length, 52 inches in width, and 54 inches in height. Pallet shall conform to Type IV or Type V.

5.2.5.1 Levels A and B. Holders packed as specified in 5.2.1 and 5.2.2 shall be unitized on pallets as specified in 5.2.5.

5.2.5.2 Level C. Holders packed as specified in 5.2.3 shall be unitized as specified in MIL-STD-794.

5.3 Marking.

5.3.1 Levels A, B and C. Each unit pack, intermediate package, exterior container and unitized load shall be marked as specified in MIL-STD-129.

Check the source to verify that this is the current version before use.

5.4 General.

5.4.1 Exterior container. Exterior container (see 5.2.1, 5.2.2, and 5.2.3) shall be of minimum tare and cube consistent with the protection required and shall contain equal quantities of identical stock numbered items to the greatest extent practicable.

5.4.2 Packaging inspection. The inspection of these packaging requirements shall be in accordance with 4.5.

6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 Intended use. The patient's bed tray card holder is intended to hold a bed tray card used as a means of identification for trays and nourishment service.

6.2 Acquisition requirements.

a. Title, number, and date of the specification.

b. Issue of DODISS to be cited in the solicitation and if required, the specific issue of individual documents referenced (see 2.1).

c. Selection of applicable levels of packaging and packing (see 5.1 and 5.2).

d. National Stock Number.

6.3 Subject term (key word) listing.

Clinic
Hospital
Identification
Nourishment service

6.4 National Stock Number (NSN) coverage. This specification covers the following item shown in the Federal Supply Catalog.

National Stock Number	Item Identification
6530-00-781-8600	Holder, Patient's Bed Tray Card

Source: https://assist.dla.mil -- Downloaded: 2026-10-21T20:20Z
Check the source to verify that this is the current version before use.

6.5 Commodity coverage. This specification does not cover all types, classes, grades, or sizes of the commodity indicated by the title of this specification, or those which are commercially available, but is intended to cover the type which is normally procured to meet requirements.

6.6 Changes from previous issue. Marginal notations are not used in this revision to identify modifications, additions, corrections, and deletions from the previous issue due to the extensiveness of the changes.
