DATA ITEM DESCRIPTION

Title: HAZARDOUS MATERIALS MANAGEMENT PROGRAM (HMMP) PLAN USING NAS 411

Number: DI-MGMT-81398B
AMSC Number: F9243
DTIC Applicable: No
Office of Primary Responsibility: 11
Applicable Forms: N/A

Approved Date: 20110930
Limitation: N/A
GIDEP Applicable: No

Use/Relationship: The Hazardous Materials Management Program (HMMP) Plan is the contractor's plan to assure appropriate consideration is given to the elimination or reduction of hazardous materials and to the proper control of hazardous materials that are not eliminated, for system(s), system components, and associated support items throughout all phases of the system life cycle.

a. Data obtained will be used to reduce hazard risk and life cycle ESOH costs. The data will also enable compliance with the requirements of relevant laws and presidential executive orders, including the National Environmental Policy Act, and the regulations that implement those laws and orders.

b. This DID contains the format, content, and intended use information for the data resulting from the work task described in paragraph 4.3, including subparagraphs 4.3.1 through 4.3.8, of Aerospace Industries Association/National Aerospace Standard (NAS) 411.

1) The HMMP Plan shall address hazardous materials imbedded in the system, produced by the system, and used or created by operation and maintenance of the system.
2) NAS 411, paragraph 4.3.2 on Hazardous Material Identification/Analysis/Evaluation states that "The procuring activity may identify and prioritize in the contract the specific hazardous material for elimination, minimization or control". The procuring activity may use different and more relevant terminology for referring to the different methods of dealing with hazardous material such as "prohibited, restricted and tracked" in lieu of "elimination, minimization or control".
3) As an element of Hazardous Material Identification/Analysis/Evaluation, the plan shall describe the approach for mitigating hazardous material risks.

c. The HMMP Plan will also describe the approach for minimizing the use of hexavalent chromium (Cr^{6+}) in amplification of the NAS 411 requirements. When Cr^{6+} use is planned, the HMMP Plan will address the following topics:

1) Cost effectiveness of alternatives over weapon life cycle.
2) Technical feasibility of alternatives.
3) Risks in each specific application (use MIL-STD-882 system safety process).
4) Manufacturing Readiness Level.
5) Material availability over the projected life cycle of the system.
6) Corrosion performance difference of alternative materials processes compared with Cr^{6+}.

Check the source to verify that this is the current version before use.

d. DI-MGMT-81398B supersedes DI-MGMT-81398A. It is intended for use by system acquisition Program Offices responsible for acquiring or modifying systems where NAS 411 is used as the basis for the HMMP.

Requirements:

1. Reference documents. The applicable issue of the documents cited herein, including their approval dates and dates of any applicable amendments, notices, and revisions, shall be as specified in the contract.

2. Format. The HMMP Plan shall be in the contractor's format.

3. Content. The HMMP Plan shall include the information required by paragraph 4.3 of NAS 411, including all subparagraphs and document the approach for minimizing Cr^{6+}.

4. End of DI-MGMT-81398B.

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.
