DATA ITEM DESCRIPTION

Title: FLIGHT FLUTTER TEST REPORT

Number: DI-MISC-81388A
Approved Date: 20070927
AMSC Number: F9004
Limitation: N/A
DTIC Applicable: No
GIDEP Applicable: No
Office of Primary Responsibility: 11 (ASC/ENFS)
Applicable Forms: No
Use/Relationship: The Flight Flutter Test Report will demonstrate compliance with flutter safety requirements (aeroelastic and aeroservoelastic) and provide a record of all flight flutter testing performed.

a. This Data Item Description is applicable to any contract for which flight flutter testing is required.

b. This DID contains the content, format, and intended use information for the data deliverable resulting from the work task described in the contract.

c. DI-MISC-81388A supersedes DI-MISC-81388.

Requirements:

1. Reference Documents. The applicable issue of the documents cited herein, including their approval dates and dates of any applicable amendments, notices and revisions, shall be as specified in the contract.

2. Format. The Flight Flutter Test Report shall be in the contractor's format.

3. Content. This report shall contain the following:

a. Air vehicle configuration.

b. Excitation method description.

c. Test procedures.

d. Test point conditions including altitude, Mach number, equivalent airspeed in knots, and load factor, n, if in an accelerated condition.

e. Methods of data reduction.

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited

Check the source to verify that this is the current version before use.

f. Typical time traces of excitation and response.

g. Frequency and damping, g, of modes tracked or investigated.

h. Evaluation of test results by the flutter engineers.

3.1. Presentation of results shall include:

a. For each configuration, a plot of altitude versus Mach number with curves of constant equivalent airspeed, the design limit speed envelope of the vehicle, and flutter test points investigated.

b. Plots of damping coefficient, g, and frequency versus airspeed for the modes investigated at a constant altitude and for a given test configuration.

4. End of DI-MISC-8138A
