COMMERCIAL ITEM DESCRIPTION

FORMULAS, INFANT (MILK-BASED)

The U.S. Department of Agriculture has authorized the use of this Commercial Item Description (CID) as a replacement for CID's Formula, Infant, Concentrated, Liquid, Milk-Based, Iron Fortified, A-A-20002; and Formula, Infant, Powdered, Milk-Based, A-A-20080.

Salient characteristics.

A. Types.

The milk-based infant formula shall be of the following types and classes as specified in the contract or purchase order.

Type I - Formula, Infant

Class 1 - Ready-To-Feed

Class 2 - Liquid, Concentrated

Class 3 - Powder

Type I infant formula is deficient in iron, supplemental iron would be required if fed to an infant as the sole source of food.

Type II - Formula, Infant, with Iron

Class 1 - Ready-To-Feed

Class 2 - Liquid, Concentrated

Class 3 - Powder

Type II infant formula with iron shall supply not less than 1.48 mg iron (Fe) per 100 Kcal [10.0 mg iron (Fe) per liter] at standard dilution. The source of the iron shall be ferrous sulfate.

B. Finished product description.

At standard dilution, concentrated liquid and powdered milk-based infant formulas shall have the same salient characteristics as milk-based ready-to-feed infant formula. All classes of infant formulas shall have a minimum of one year shelf life after date of packaging.

Cans of milk-based infant formulas shall be free of excessive dents and distortions, free of rust and other evidence of improper storage. Unless otherwise specified, the age of product at time of shipment shall not exceed 30 days after packaging.

All classes of infant formulas shall, at standard dilution, supply not less than 20 kilocalories (20 Kcal) per fluid ounce.

Class 1: Ready-to-feed infant formula is product ready to use from the primary container. It shall have a normal characteristic taste and odor, free from rancidity and other undesirable tastes and odors. It shall be of medium viscosity with a uniform consistency and appearance. It shall possess a natural white to light cream color. The product shall be smooth and free from fat or protein separation, lumps, clots, gel formation, coarse milk solids precipitate or sedimentation, and extraneous material.

Ready-to-feed infant formula shall contain not more than 88.0 percent moisture by weight. It shall be a commercially sterile product.

Class 2: Concentrated liquid infant formula shall contain not more than 75.0 percent moisture by weight. Standard dilution for this product is equal parts of concentrated liquid infant formula and water. The concentrated liquid infant formula shall be a commercially sterile product.

Class 3: Powder infant formula shall contain not more than 3.0 percent moisture by weight. Powder infant formula shall be of suitable particle size and solubility such that it will readily disperse in warm water. Standard dilution of powder formula is one level scoop of powder for each two fluid ounces of water. It shall contain not more than 15.0 mg scorched particles when compared to the United States Scorched Particle Standards for Dry Milks (7 CFR 58.2676). The microbiological determinations of milk-based powder infant formula shall be in accordance with the methods outlined in the Methods of Laboratory Analysis (DA Instruction 918-38) currently in effect on the date of solicitation. Upon microbiological analysis, the powder infant formula shall not exceed the following values:

Standard Plate Count - Not more than 500 per gram
Coliform - Not more than 10 per gram
Salmonella - Negative
Coagulase Positive Staphylococci - Negative

Contractor's certification.

By submitting an offer, the contractor certifies that the product offered meets the specified salient characteristics of this Commercial Item Description; conforms to the producer's own specifications and standards, including product characteristics, manufacturing procedures, quality control procedures, and storage and handling practices, has a national or regional distribution from storage facilities located within the United States, its territories, or possessions. The Government reserves the right to determine proof of such conformance prior to the first delivery from point of origin and any time thereafter, up to and including delivery at final destination, as may be necessary to determine conformance to the provisions of the contract.

Regulatory requirements.

The delivered product shall comply with all applicable Federal and State mandatory requirements and regulations relating to the preparation, packaging, labeling, storage, distribution, and sales of the product in the commercial marketplace.

The product shall comply with all regulations (21 CFR Parts 1 to 199) pursuant to the provisions of the Federal Food, Drug, and Cosmetic Act and the Infant Formula Act of 1980 as determined by the Food and Drug Administration.

Quality assurance.

Prior to submission of offers, plants shall be approved by the Dairy Grading Section, Dairy Division, Agricultural Marketing Service, USDA. Infant formula shall be manufactured only in such approved plants. All dairy products used as ingredients shall originate from an approved plant, except the vitamin folacin may be of domestic or foreign production. Exceptions for any ingredients to be used, other than folacin, must be approved in writing by the Dairy Division, USDA.

Examination of containers shall be in accordance with the United States Standards for Condition of Food Containers currently in effect on the date of solicitation and in accordance with the requirements in the applicable regulations.

Preservation, packaging, packing, labeling, and marking.

The product shall be preserved, packaged, and labeled in accordance with good commercial practice and packed in fiberboard boxes that will assure acceptance by common carrier and provide product protection against loss and damage during multiple shipment, handling, and storage. Shipping containers shall comply with the National Motor Freight Classification or the Uniform Freight Classification, as applicable. Each can of powder infant formula shall include a measuring scoop and be equipped with a plastic lid for use after opening.

Notes.

Purchasers shall specify:

- Type and class of infant formula.
- Labeling requirements, if different from good commercial practice.
- If USDA is to perform certification of the product.
- If USDA is to perform a Condition of Food Container inspection.
- Container and container pack size:

A. **Ready-To-Feed**

8 fluid ounces per can, packed 24 cans per case.

32 fluid ounces per can, packed 6 cans per case.

B. **Concentrated Liquid**

13 fluid ounces per can, packed 24 cans per case.

C. **Powder**

1.06 ounces foil pouch, packed 4 pouches per carton, packed 6 cartons per case.

1.06 ounces foil pouch, packed 4 pouches per carton, packed 12 cartons per case.

14 ounces per can, packed 6 cans per case.

16 ounces per can, packed 6 cans per case.

16 ounces per can, packed 12 cans per case.
