COMMERCIAL ITEM DESCRIPTION

SUNGLASSES, IMPACT RESISTANT

The General Services Administration has authorized the use of this commercial item description in preference to MIL-S-475.

Abstract. This commerical item description covers one type and one size of neutral gray, impact resistant, polycarbonate sunglasses for wear by military personnel to protect their eyes from light, glare, and airborne projectiles.

1. SALIENT CHARACTERISTICS

1.1 Description. The impact resistant sunglasses shall provide ballistic protection (see 1.2) and light attenuation (see 1.3). Since compatability with existing individual equipment and military prescription eyewear is essential to the effectiveness of the sunglasses, the configuration must be identical or equal to the UVEX Winter Optical Corporation Ultra Spec-2000 (see figure 1).

1.1.1 Color. The lens and entire frame shall be neutral gray in color.

1.1.2 Material. The sunglasses shall be fabricated entirely from polycarbonate.

1.2 Ballistic protection (Government unique requirements). The ballistic resistance of the sunglasses shall be such that they will pass a Vo test using a 0.15 caliber, 5.8 grain, T37 Fragment Simulating Projectile (FSP) at a velocity of 640 to 660 feet per second when tested in accordance with the requirements of MIL-STD-662, Ballistic Test Acceptance Method for Personal Armor Material. The sunglasses shall be mounted on a male headform in the as-worn position. The 0.002 inch thick aluminum foil witness sheet shall be mounted 2 inches behind the area of impact. The sample shall be hit once at normal incidence at a point centered vertically and at a horizontal distance of 32 mm from the centerline. The sample shall be considered a failure if the witness sheet is punctured or if the sample is cracked.

Beneficial comments, recommendations, additions, deletions, clarifications, etc., and any other data which may improve this document should be sent to: Commander, U.S. Army Natick Research, Development, and Engineering Center, ATTN: STRNC-IRT, Natick, MA 01760-5019.

Check the source to verify that this is the current version before use.

1.3 Photopic transmittance. The sunglasses shall limit the photopic transmittance to 15 ± 3 percent.

1.4 Mechanical and optical performance. The sunglasses shall meet the mechanical and optical performance requirements contained in ANSI Z87.1-1989, Practice for Occupational and Educational Eye and Face Protection, and ANSI Z80.3-1986, Requirements for Non-Prescription Sunglasses and Fashion Eyewear.

2. QUALITY ASSURANCE

2.1 Certification. The contractor shall certify and maintain substantiating evidence that the product offered meets the salient characteristics and requirements of this Commercial Item Description, and that the product conforms to the producer's own drawings, specifications, standards, and quality assurance practices. The Government reserves the right to require proof of such conformance prior to first delivery and thereafter as may otherwise be provided for under the provisions of the contract.

2.2 Metric product. Products manufactured to metric dimensions will be considered on an equal basis with those manufactured using inch-pound units, provided they fall within specified tolerances using conversion tables contained in the latest revision of Federal Standard No. 376, and all other requirements of this CID are met. If a product is manufactured to metric dimensions and those dimensions exceed the tolerances specified in the inch pound units, a request should be made to the contracting officer to determine if the product is acceptable. The contracting officer has the option of accepting or rejecting the product.

2.3 Regulatory requirements. The offeror/contractor is encouraged to use recoverable materials in accordance with Public Law 94-580 to the maximum extent practicable.

3. PACKAGING

3.1 Packaging. Each pair of sunglasses shall be unit packed in a plastic bag.

3.2 Packing. Sixty pair of sunglasses shall be nested two in length, ten in width, and three in depth in a fiberboard shipping container conforming to style RSC-L, type CF, class domestic, grade 275 of PPP-B-636. A corrugated fiberboard pad shall be placed between each layer of sunglasses. Inside dimensions of each shipping container shall approximate 15-1/2 inches in length, 13-1/2 in width, and 9-1/2 inches in depth.

Check the source to verify that this is the current version before use.

3.3 Palletization. When specified, shipping containers shall be palletized in accordance with load type Ia of MIL-STD-147. Each prepared load shall be bonded with straps in accordance with bonding means C and D or film bonding means F or G. The pallet pattern shall be number 7 in accordance with the appendix of MIL-STD-147.

3.4 Marking. In addition to any special marking required by the contract or purchase order, unit packs, shipping containers and palletized unit loads shall be marked in accordance with MIL-STD-129.

4. NOTES

4.1 Ordering Data.

a. Title, number, and date of this document.
b. Selection of applicable packaging required (see 3.1).

4.2 Sources of documents.

4.2.1 Sources of government documents. Copies of Military and Federal documents are available from:

Standardization Documents Order Desk
Building 4D
700 Robbins Avenue
Philadelphia, PA 19111-5094

4.2.2 Sources for nongovernment association documents.

ANSI Z87.1-1989 - Practice for Occupational and Educational Eye and Face Protection

ANSI Z80.3-1986 - Requirements for Non-Prescription Sunglasses and Fashion Eyewear

Both are available from:

American National Standards Institute (ANSI)
1430 Broadway
New York, NY 10018

4.3 Government unique requirements. Whenever "(Government unique requirements)" is included in the title of a paragraph under "Salient Characteristics" it is meant that the requirement is something that is not normally offered to the commercial marketplace by the manufacturer.

4.4 Possible sources of supply.

American Optical Corporation
Southbridge, MA 01550
