SPECIFICATION SHEET

SEWING MACHINE, INDUSTRIAL; DARNING, CYLINDER BED, SINGLE NEEDLE, 301 STITCH, PARACHUTE REPAIR

This specification sheet is approved by the Commissioner, Federal Supply Service, General Services Administration, for the use of all Federal agencies.

The complete requirements for procuring the sewing machines described herein shall consist of this document and the issue in effect of Specification OO-S-256/GEN.

1. SCOPE

1.1. Scope. This specification covers the specific requirements for single needle, flatbed, 301 stitch, heavy duty, darning, industrial sewing machines used in the fabrication and repair of aerial delivery equipment.

2. APPLICABLE DOCUMENTS

2.1 Government publications. The following documents of the issue in effect on the date of invitation for bids or request for proposal, form a part of this specification to the extent specified herein.

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be used in improving this document should be addressed to: U.S. Army Natick Research, Development, and Engineering Center, Natick, MA 01760-5017 by using the Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

AMSC N/A FSC 3530

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

DRAWING

U.S. ARMY NATICK RESEARCH, DEVELOPMENT, AND ENGINEERING CENTER

6-1-9367 Sewing Machine, Industrial, Darning, Single Needle, Heavy Duty: Parachute Repair and Fabrication Test Requirements

(Copy of drawing is available from the U.S. Army Natick Research, Development, and Engineering Center, ATTN: SATNC-UX, Natick, MA 01760-5017.)

3. REQUIREMENTS

3.1 Machine, heavy duty. The heavy duty darning machine shall have the capability of darning light to heavy cotton and nylon duck utilizing metric needle sizes 90, 110, 120, 125, 130, 140 and 180. The machine shall operate at speeds not less than 2000 or greater than 3000 stitches per minute. The machine shall be manually or semi-automatically lubricated. The machine shall be furnished with a cone on one end of the cylinder bed. The machine shall be pedestal mounted. Each machine shall be supplied with a bobbin winder and a knee lifter. The machine shall not have any type of feeding mechanism. The machine shall provide a minimum height of 3/8 inch under the presser foot. The machine shall be furnished with a working room distance to the right of the needle of 10 inches minimum to 16 inches maximum. The machine shall be furnished with a type II table top. The outside dimensions of the table top shall be 20 by 40 by 2 inches thick with a tolerance of ±1/4 inch for each dimension.

3.1.1 Spare parts. The machine shall be furnished with the following spare parts in the quantity indicated:

Spare parts

Item Identification	Quantity
Face plate screws	2
Thread take up spring	1
Thread tension spring thumb nut	1
Tension stud	1
Sewing hook assembly	1
Sewing hook holding screw	1
Bobbin, metal	10
Bobbin case assembly	1
Saddle gear screw	1
Needle bar thread guide	1
Needle bar thread guide screw	2
Needle set screw	2
Lifting bracket screw	2
Presser foot finger guard spring	1
Presser foot holding screw	1

Spare parts (cont'd)

Item Identification	Quantity
Presser foot	1
Presser foot finger guard spring screw	2
Thread guide screw	2
Needle brushing thread guide	1
Top plate holding screw	1
Take up lever stud	1
Needle, round point, chrome finish:	
Metric sizes:	
90	100
110	100
125	100
140	100
180	100

3.2 Performance.

3.2.1 Machine operation. The heavy duty machine shall be capable of darning and mending panels, pack sections and deployment bags of personnel, extraction and cargo parachutes when tested as specified in 4.1.1 and 4.2.1. The machine shall show no signs of stalling, pounding, shearing of threads, failure to lock stitches, or deformation of any part during the darning and mending of these articles.

4. QUALITY ASSURANCE PROVISIONS

4.1 First article testing. When a first article is required it shall be tested in accordance with the test method specified in table I. Any test failure shall be cause for the rejection of the first article.

TABLE I. First article test

Sewing machine	Requirement paragraph	Test method
Heavy duty	3.2.1	4.1.1

Check the source to verify that this is the current version before use.

4.1.1 Machine test. The heavy duty machine shall be operated to darn and mend all of the typical parachute details as shown on Drawing 6-1-9367. Any nonconformance with the requirements of 3.2.1 shall constitute failure of this test.

4.2 End item testing. Each end item shall be tested in accordance with the test method specified in table II. Failure of any test shall be cause for rejection of the end item involved.

TABLE II. End item testing

Sewing machine	paragraph	Test method
Heavy duty	3.2.1	4.2.1

4.2.1 Machine test. Each machine shall be operated to sew samples of typical parachute construction, as shown by end item test detail on Drawing 6-1-9367. Any nonconformance with the requirements of 3.2.1 shall constitute failure of this test. The completed test samples shall be supplied with each machine furnished.

5. PACKAGING

This section does not apply to this detailed specification.

6. NOTES

6.1 Intended use. The sewing machines are intended for industrial use for fabricating and repairing parachutes.

6.2 Ordering data.

Title, number and date of this specification.

6.3 Supersession data. This specification sheet supersedes and includes the content of interim federal specification sheet OO-S-00256/16B(GL), dated October 7, 1988
