3. REQUIREMENTS

3.1 General. The requirements for acquiring the product described herein shall consist of this document and MIL-PRF-55182G.

3.2 Interface and physical dimensions. Resistors shall meet the interface and physical dimensions specified on figure 1.

* 3.2.1 Characteristic. Style RN*57 is available in characteristic C and characteristic E. 1/

3.2.2 Terminal. Terminal types RNR, and RNN are available for characteristic C and characteristic E.

3.3 Power rating. The power rating shall be 0.125 watt.

3.4 Voltage rating. The continuous working voltage shall not exceed 250 volts.

3.5 Resistance. The minimum resistance shall be 10.0 ohms and the maximum resistance shall be 0.200 megohm.

3.6 Resistance tolerance. This style is available only in tolerance F (1.0 percent).

3.7 Voltage coefficient (applicable to resistors of 1,000 ohms and above). The voltage coefficient shall not exceed ±0.005 percent per volt.

3.8 Marking. Due to size limitations this style resistor shall be marked with the following minimum information:

226C - Date code, characteristic.
10R0 - Coded resistance value.
FMDJ - Tolerance, product level, lead material, JAN marking.

The complete marking is required on the unit package. Where manufacturers are able to provide more information, the following is preferred in the sequence presented: style, manufacturer's trademark, production lot code, and source code.

6. NOTES

(This section contains information of a general or explanatory nature which may be helpful, but is not mandatory.)

6.1 Notes. The notes specified in MIL-PRF-55182 are applicable to this specification.

6.2 Acquisition requirements. Acquisition documents must specify the following:

a. Title, number, and date of the specification.

b. Issue of DoDISS to be cited in the solicitation, and if required, the specific issue of individual documents referenced (see 2.2.1).

* c. Packaging requirements (see 5.1). (i.e. Electrostatic discharge (ESD) sensitive packaging).

* 6.3 Electrostatic charge. Under several combinations of conditions, these resistors can be electrically damaged, by electrostatic charges, and drift from specified value. Users should consider this phenomena when ordering or shipping resistors. Direct shipment to the Government is controlled by MIL-DTL-39032 which specifies a preventive packaging procedure.

* 6.4 Changes from previous issue. The margins of this specification are marked with asterisks to indicate where changes from the previous issue were made. This was done as a convenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and contractors are cautioned to evaluate the requirements of this document based on the entire content irrespective of the marginal notations and relationship to the last previous issue.
