SUPERSEDING
Amendment-1(GSA-FSS)
February 10, 1970

AMENDMENT

TO

INTERIM FEDERAL SPECIFICATION

DETERGENT-BACTERIOSTAT, GENERAL PURPOSE, SUPERCONCENTRATE

This amendment was developed by the General Services Administration, Federal Supply Service, Standardization Division, Washington, DC 20406, based upon currently available technical information. The General Services Administration has authorized this amendment as a part of Interim Federal Specification P-D-001397A(GSA-FSS), dated June 14, 1969.

PAGE 1

Paragraph 2.1: Add:

"Fed. Test Method Std. No. 536 - Soap and Soap Products (Including Synthetic Detergents), Sampling and Testing."

PAGE 3

Paragraph 3.3.1, delete and substitute:

3.3.1 Bacteriostatic activity. Any portion of the finished compound shall show a clear and measurable zone of inhibition when tested by the seeded agar cup plate test as specified in 4.4.11.

Paragraphs 3.5 and 3.5.1, delete and substitute:

3.5 Solubility. The superconcentrate shall readily disperse in 120°F. hard water to a solution that shows no evidence of separation when tested as specified in 4.4.7.

Add new paragraph 3.13, as follows:

3.13 Cleaning efficiency. Any portion of the concentrate shall show a cleaning efficiency of not less than 70 percent when tested in accordance with Tentative Standard Method 6701T of Federal Test Method Std. No. 536 as specified in 4.4.14.

PAGE 6

Paragraph 4.4.7, line one, delete "sample" and substitute "superconcentrate".

Paragraph 4.4.7.2, delete in its entirety.

PAGE 7

Paragraph 4.4.9.2, subparagraph "1.h." delete and substitute "carrier gas flow rate at 15 cc/min".

Paragraph 4.4.9.2, subparagraph 3, delete in its entirety and substitute:

"Make up solution (A). Weigh 10 grams (± 0.1g) of sample and dilute to 100 ml (± 1 ml) with normal propanol. Using 100 ml conical centrifuge tubes, centrifuge at 2000 RPM for 15 minutes. Inject three microliters of solution A into gas chromatograph and press the inject start button. Make triplicate runs and average the areas of similar peaks. Time to completion of a run should be less than 15 minutes."

PAGE 7 (Con.)

Paragraph 4.4.9.2, subparagraph 4, delete in its entirety and substitute:

"Make up solution (B). Weigh 10 grams of sample plus one gram (1 g ± .01 g) 99 mole percent ethylene glycol mono butyl ether. Dilute to 100 ml with normal propanol with tolerance in section three above. Using 100 ml conical centrifuge tubes, centrifuge at 2000 RPM for 15 minutes. Inject three microliters into the gas chromatograph and press the inject start button. Make triplicate runs and average the areas of similar peaks.

Paragraph 4.4.9.2, subparagraph 5, delete in its entirety and substitute:

"Calculation:

$$\frac{\text{Area A}}{\text{Area B minus Area A}} \times 10 = \text{Percent ethylene glycol mono butyl ether."}$$

Add new paragraphs as follows:

4.4.14 Cleaning efficiency test.

4.4.14.1 Preparation of test sample. Twelve ounces of superconcentrate shall be added to 120°F. distilled water to make one gallon of concentrate. The concentrate shall be stored for a minimum of 72 hours at 70° ± 5°F., before testing.

4.4.14.2 Test Procedures. One part concentrate when mixed with 20 parts of hard water as specified in Tentative Standard Method 6701T of Fed. Test Method Std. No. 536, shall show a cleaning efficiency to comply with the requirements of 3.13.

PAGE 8

Paragraph 5.1.1.2, at end of first sentence, after "seal A", add "or B".
