MILITARY SPECIFICATION

MOUNT, GUN: M140, M140A1, M150 AND M150A1

This amendment forms a part of Military Specification MIL-M-45976 (WC) dated 19 January 1977, and is approved for use by the US Army Armament Research and Development Command and is available for use by all Departments and Agencies of the Department of Defense.

PAGE 4

Add new paragraph 3.3.3.2.1 as follows:

"3.3.3.2.1 Sampling Plan For Contaminated Oil Check. The first five gun mounts produced from regular production shall be 100% tested for compliance with the requirements for the level of contamination, air bubbles, and physical count specified on the applicable drawing. If these mounts pass the test, sampling by lot size as specified herein shall be implemented. A lot shall consist of ten mounts or one day's production, whichever is less, from which a sample of one shall be randomly selected for testing as prescribed in para. 3.3.3.2. Should any sample fail the test or if there is any change in production method, material or vendors, 100% inspection of five gun mounts shall be reinstituted. After Government approved corrective action, if necessary, has been taken and the quality of product is assured, testing on a sampling basis may be reinstated."
