DATA ITEM DESCRIPTION

Form Approved
OMB No 0704-0188

1 TITLE	2 IDENTIFICATION NUMBER
Oil Analysis Report	DI-MISC-80390

3 DESCRIPTION / PURPOSE

3.1 The Oil Analysis Report provides technical information required to support the maintenance of engines, transmissions, and other components (i.e., hydraulic, final drives) that utilize lubricating oil to reduce friction or wear.
3.2 Reports are used to improve operational readiness, promote safety, detect impending component failures and conserve resources by applying on-condition oil changes.

4 APPROVAL DATE (YYMMDD)	5 OFFICE OF PRIMARY RESPONSIBILITY (OPR)	6a DTIC APPLICABLE	6b GIDEP APPLICABLE

7 APPLICATION / INTERRELATIONSHIP

7.1 This Data Item Description (DID) contains the format and content preparation instructions for the data product generated by the specific and discrete task requirement as delineated in the contract.

7.2 This Data Item Description should be incorporated into development contracts for equipment anticipated to require the use of lubricating oil(s).

8 APPROVAL LIMITATION	9a APPLICABLE FORMS	9b AMSC NUMBER
		A4155

10 PREPARATION INSTRUCTIONS

10.1 Format. The Oil Analysis Report shall be in the contractor's format. When the contract requires multiple or revised submissions of the Oil Analysis Report, each submission shall retain the format initially utilized.

10.2 Content. The Oil Analysis Report shall consist of the following information:

10.2.1 Wearmetal.

a. Oil analysis wearmetal signatures or developed guidelines in parts per million (PPM).

b. Identification of normal and abnormal wearlevels in parts per million (PPM) as developed using standard analytical instruments compatible with those used by the Army.

c. Acceptable break-in wearmetal levels and length of time required for acceptable break-in of item.

10.2.2 Metallurgy.

a. Description and metallurgy of all moving parts subject to wear and lubricated by the lubricating oil system with identification of critical parts.

(Continued on Page 2)

11 DISTRIBUTION STATEMENT

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

Check the source to verify that this is the current version before use.

Block 10 Preparation Instructions (Continued)

10.2.2 Metallurgy. (Continued)

b. Component and assembly cutaway drawings or sketches which clearly identify critical elements subject to wear.

10.2.3 Oil Sampling Valves.

a. Locations of sampling valves for obtaining used oil samples for oil analysis.

b. The integrity of the used oil sample and the accessibility of the oil sampling valve.

10.2.4 Chemical Composition.

a. Chemical composition of lubricants that are other than standard specification lubricants.

10.2.5 Failure Rates.

a. List of oil lubricated components (e.g., transmissions, engines, axles, fluid and hydraulic drives) in descending order of failure rates.

10.2.6 Recommendations.

a. Used oil sampling intervals.

b. Used oil change intervals.

c. Lubricant physical property limitations (e.g., normal viscosity range, levels of contamination).
