# 1. SCOPE

1.1 General. This dash-numbered part of the Automated Engineering Document Preparation System (AEDPS), provides detailed requirements for the preparation of Military Specification Exception (MSE) documentation for electrical wire.

1.2 Purpose. This military standard provides the necessary information to prepare a Specification Requirement Sheet (SRS) which will be used to generate a MSE by automated data processing.

1.3 Utilization. General instructions, quality assurance provisions, packaging, and notes, applicable to all AEDPS dash-numbered parts, have been included in the basic document (DOD-STD-35) to avoid redundancy. Unless otherwise specified in this dash-numbered part, the following list contains additional subjects applicable to all AEDPS dash-numbered parts and are included in DOD-STD-35:

a. Writing Methodology
b. Document and Part Numbering
c. Applicable Documents
d. Single and Multi-item Specification (Tabulation)
e. Keyword Code Index (KCI)
f. General Requirements of AEDPS

1.4 Military Specification Exception Title Index. The title code for a MSE shall be selected from one of the MSE titles listed in the Title Index (see table I). Data bases have been established for the generation of MSEs for the MSE titles indicated. If a suitable title code is not contained in the Title Index, leave the title code spaces on the SRS blank, and attach a request for assignment of a title code. Include in the request the desired title and the base document identifier. A code will be assigned and the code, title, and base document will be made a part of the Title Index.

One of the six-digit codes listed in the Title Index and entered on a SRS, specifies that the title of the MSE will be the title shown in the Title Index.

Each MSE title, listed in the Title Index, is compatible with the document(s) listed with that title under base document. The list of base documents may or may not be a complete listing. The information shown under coverage is intended for the user's reference. When more than one document is listed for a MSE title, this information will be useful in determining which of the documents is most suitable for use as the base document.

Source: https://assist.dla.mil -- Downloaded: 202640-23T21:06Z
Check the source to verify that this is the current version before use.

The MSE title may or may not be the same as the title used in DODISS, FIIG, or the base document. In general, the MSE title uses the basic federal item name listed in Cataloging Handbook H6. However, titles with additional modifying and identifying words are provided to assist in defining the scope of the MSE. Also, less restrictive titles are provided to prevent exclusion of items.

# 5. DETAILED REQUIREMENTS

5.1 Introduction. This section provides instructions for completion of the SRS and references for instructions on specific requirements contained in DOD-STD-35.

5.2 MSE Formats. AEDPS has the capability to prepare a six-section or a single-section document. The six-section document appears similar to a six-section military specification. The single-section document appears similar to a military specification sheet. Specification requirements described in DOD-STD-35 are applicable to either of the formats selected. It is mandatory that one of the two following codes and an "X" be entered on the SRS to create the desired MSE format:

a. 0700 for a six-section format

b. 0800 for a single-section format

5.3 Referenced Documents. Section 2 of the MSE may contain a list of all referenced documents within Sections 3, 4, and 5 of the MSE. Instructions for referencing documents to appear in Section 2 of the forthcoming MSE are contained in DOD-STD-35.

5.4 Tabulation. Instructions for tabulation are provided in DOD-STD-35. Table III provides codes for column headings which may be used for Electrical Cable, Wire characteristics. When different units of measure are available for specifying a characteristic, only one of the units may be tabulated; e.g. either ounces or pounds.

Check the source to verify that this is the current version before use.

5.5 Keyword Code Index (KCI) and Standard Paragraphs. The KCI provides codes, to be entered on a SRS, that are unique for the type part covered by this dash-numbered part of DOD-STD-35. The left-hand page presents the information in outline form using keywords and codes. The right-hand page presents the words that will appear in the MSE. To find the code to be entered on the SRS, find the subject in the index at the back of this dash-numbered part. Find the keyword on the KCI and it's associated code. Enter, on the SRS, the code and the characteristic value required. After the part's unique characteristics have been specified, refer to DOD-STD-35 when exceptions are required to Quality Assurance, Packaging, Notes, etc. Instructions are in DOD-STD-35 on how to enter any type characteristic value. Appendix B, Characteristic Code Index, provides a numerical list of codes used in this dash-numbered part. This index identifies the location of codes by page number.

5.5.1 Interrelationship of Codes. The interrelationship of the codes is shown by the indentation level of characteristic names on the KCI. The kind of characteristic value is shown by a colon, parentheses, period or underline. The standard paragraph, of which the code is a part, is shown adjacent to the code on the right-hand page. When a characteristic value, entered with a code, becomes part of the paragraph, the code is shown in the paragraph where the characteristic value will print. The MSE will contain the exact characteristic value entry, as supplied with the code, except for "X" entries.

5.5.2 Automatic MSE Data. Some statements, such as Altitude and Temperature, will appear in the printed MSE without making additional entries. These statements are linked by data base logic to characteristic codes listed under them and will print when one of the codes listed is used. Other statements may print automatically depending on the type MSE selected. Explanations are noted on the KCI as required.

5.5.3 DOD-STD-35 Tables. The KCI of this document contains references to tables in DOD-STD-35. Refer to DOD-STD-35 for general explanation in the generation of tables.

**INSTRUCTIONS:** In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge *(DO NOT STAPLE)*, and mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretation, was too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

*NOTE:* This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document*(s)* or to amend contractual requirements.
