MIL-R-22988(WP)
Amendment-1
1 MARCH 1966

MILITARY SPECIFICATION

RECEIVING SET, COUNTERMEASURES AN/ALR-8

This amendment forms a part of Military Specification MIL-R-22988(WEP) dated 15 January 1962 and has been approved by the Bureau of Naval Weapons, Department of the Navy

By this amendment basic MIL-R-22988(WEP) is changed to MIL-R-22988(WP)

Page 20, paragraph 3.4.10.1: Delete and substitute

"3.4.10.1 Function - Mixer Amplifier CV-124/APR-13 receives signals over a 4 MC bandwidth centered at 36.7 MC from the IF Preamplifier in RF Tuner TN-200/APR-13 and over a 5 MC bandwidth centered at 60 MC from the IF Preamplifier in RF Tuners TN-178/APR-13 and TN-179/APR-13. It provides an audio output for aural reception, a wide-band or narrow-band video output from which the characteristics of received signals can be determined, and a panoramic output which is used in Indicator ID-226D/APR-9 for panoramic presentation of the IF bandpass and IF output."

Page 21, paragraph 3.4.10.3.2.1: Delete and substitute

"3.4.10.3.2.1 I-F Response at 36.7 MC - The Bandwidth to the extreme 2 db point, using maximum gain as the reference level, shall be at least 6.4 MC and shall be centered at 36.7 MC ± 0.5MC. Gain variation between the extreme 2 db point shall not exceed 2 db. The apparent power gain shall be less than 52.5 db as measured with a 93 ohm signal source and at a second detector level of 0.6 ma DC'. The expression 'apparent power gain' is used here because the input power is a CW RMS signal and the output is DC power; therefore, the apparent power gain is the ratio of DC power output at the second detector load resistor to the CW signal power input expressed in db."
