MILITARY SPECIFICATION

MOUNT, TELESCOPE: M110

This amendment forms a part of Military Specification MIL-M-45659C(MU), dated 11 May 1964.

* Add new paragraph 3.5.4:

"3.5.4 Boresight retention.- A line of sight thru the boresight cross of a simulated telescope shall not deviate by more than 0.25 mils after three engagements of the telescope into the mount. After each engagement this deviation shall be measured relative to the direction of sight prior to the first removal of the telescope.

* Add major Characteristic 107. in Table I as follows:

"107. Boresight retention 3.5.4 4.5.5.1"

Add new paragraphs 4.1.2, 4.1.2.1 and 4.1.2.2 as follows:

"4.1.2 First article (initial production) approval.- The requirement for first article approval and the responsibility (Government or contractor) for first article testing shall be as specified in the contract. The sample for first article approval tests shall consist of 3 mounts plus 3 each of all items covered by SQAP. The sample shall be manufactured in the same manner, using the same materials, equipment, processes, and procedures as used in regular production. All parts and materials, including packaging and packing, shall be obtained from the same source of supply as used in regular production.

4.1.2.1 Government testing.- When the Government is responsible for conducting first article approval tests, the contractor, prior to submitting the sample to the Government, shall inspect the sample to insure that it conforms to all the requirements of the contract and submit a record of this inspection with the sample, including certificates of conformance for materials.

4.1.2.2 Contractor testing.- When the contractor is responsible for conducting first article approval tests, the sample shall be inspected by the contractor for all the requirements of the contract. The sample and

a record of this inspection, including certificates of conformance for materials, shall be submitted to the Government for approval. The Government reserves the right to witness the contractor's inspection."

* Paragraph 4.5.3: Delete last sentence and substitute: "When properly oriented, the tests of 4.5.4, 4.5.5 and 4.5.5.1 shall be conducted."

* Add new paragraph 4.5.5.1 as follows:

"4.5.5.1 Boresight retention.- The test shall be performed utilizing an alinement test adapter conforming to Drawing F11738151, a viewing telescope conforming to Drawing F5549108 and the drawings depicted thereon.

a. The flat machined surface on the 2 inch diameter of the alinement test adapter shall be positioned in a horizontal plane within 10 seconds. With the viewing telescope inserted into the adapter, the telescope shall be alined so that its optical axis is coincident to the geometric axis of the test adapter. Rotate viewing telescope so that its vertical reticle line is perpendicular to the flat machined surface of the alinement adapter. The telescope shall then be made secure in the adapter.

b. The boresight retention test is performed with the mount positioned and oriented in accordance with 4.5.3. Insert the alinement test adapter, with viewing telescope, into the mount under test. Direct a line of sight through the viewing telescope to the MIL target. Observe the position of the intersecting point of telescope's reticle lines with reference to the intersecting point of the vertical and horizontal target lines. Record the measurement. Any deviation of the line of sight from the initial recorded measurement shall not exceed the tolerance specified in 3.5.4 when the test adapter, with telescope, is removed and repositioned in the mount three consecutive times."

* The margins of this amendment are marked with an asterisk to indicate where changes from the previous amendment were made. This was done as a convenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and contractors are cautioned to evaluate the requirements of this document based on the entire content irrespective of the marginal notations and relationship to the last previous issue.
