MIL-T-48260(AR)
AMENDMENT 2
23 November 1982
SUPERSEDING
AMENDMENT 1
8 November 1976

MILITARY SPECIFICATION

TAPE, POLYESTER

(FOR USE IN AMMUNITION)

This Amendment forms a part of Military Specification MIL-T-48260(PA), dated 5 October 1973, and is approved for use by the US Army Armament Research and Development Command, and is available for use by all Departments and Agencies of the Department of Defense.

PAGE 9

4.4.8 Acidity or alkalinity. Delete in its entirety and substitute the following:

"4.4.8 Acidity or alkalinity. Decant the water extract obtained in the determination of pH into a 250 mL beaker forcing as much absorbed water as possible out of the tape by pressing the tape against the side of the beaker with the aid of a glass stirring rod. If the pH of the water extract is 7.0 or greater, titrate the solution with a 0.10 N hydrochloric acid solution using methyl red as the indicator.

Calculate any alkalinity to percent sodium carbonate as follows:

$$\text{Percent sodium carbonate} = \frac{5.3\ VN}{W}$$

Where:

V = mL of hydrochloric acid solution required
N = normality of the hydrochloric acid solution
W = weight of sample

If the pH of the water extract is 6.9 or less, titrate the solution with approximately 0.1N sodium hydroxide solution of

known normality using phenolphthalein indicator to the first permanent pink color. Calculate any acidity to percent acetic acid as follows:

$$\text{Percent of acetic acid} = \frac{6.0\ VN}{W}$$

Where:

V = mL of sodium hydroxide solution required
N = normality of the sodium hydroxide solution
W = weight of the sample"

NOTE: The changes which appeared in Amendment 1 have been intentionally deleted in this Amendment, and the parameters concerned are to remain as they appear in the original specification (MIL-T-48260(PA)).
