MIL-D-70430 (AR)
AMENDMENT 2
30 June 1984
SUPERSEDING
Amendment 1
14 February 1984

MILITARY SPECIFICATION

DECELERATOR, RAM AIR, PARTS AND CONTAINER ASSEMBLY

This Amendment forms a part of Military Specification MIL-D-70430 (AR), dated 12 September 1983, and is approved for use by the U.S. Army Armament, Munitions and Chemical Command, and is available for use by all Departments and Agencies of the Department of Defense.

PAGE 10

4.4.2.1, Add "Major 106: Maximum diameter of radius blend .40% 3.4 Gage".

PAGE 23

* 4.5.1: Delete "The RAD Assembly Complete shall be brought to.....to allow for internal pressure measurements." and substitute "The RAD Assembly Complete (P/N 9345154) shall be inflated to peak pressure within a duration interval not to exceed 14.0 milliseconds by an inert gas which is exhausted by means of a solenoid valve from a lecture bottle (having an internal volume 27.5 ± 0.5 cu in) pressurized to 490 + 10 psi, as described by drawing 600245. In preparation for the test, it will be required to machine the center of the upper RAD Plate (P/N 9349235) of the RAD Assembly Complete to acccommodate the inflation input orifice (a 1/8 inch pipe fitting is normally sufficient). Pressure measurement of the lecture bottle shall be accomplished by means of a suitable gage placed in the pneumatic circuit so as to allow direct exposure to the interval lecture bottle pressure. Measurement of the inflation interval of the RAD Assembly Complete shall be accomplished by means of a suitable piezoelectric transducer which is positioned along the axis of one lobe of the lower RAD Panel (P/N 9345150), a distance of 2.0 + 0.5 inches from center, and coupled to a suitable oscilloscope with trace storage capacity."
